TAKE UP PELMANISM

For Progress and Prosperity

PELMANISM is a working course in Practical Psychology directed to the needs of the average man and woman.

The Pelman Course is based on over 50 years' intensive study concurrent with experience in dealing with the difficulties, failings, fears, aspirations, and ambitions of more than 750,000 men and women of all ages and occupations in all parts of the world.

You would like your affairs to prosper and your income to increase. Pelmanism will help you to achieve this and will enable you to develop that zest for living which comes with an awakened mind; also with quickened mental powers your awakened ability will enable you to enjoy those purchasable pleasures that come with extra money.

The Pelman Training is scientific, precise, and individual. It can help to make this year a fruitful one for you.

Pelmanism will rapidly and permanently banish defects and weaknesses. It will keep your mind vigilant and self-reliant and develop valuable positive qualities.

Pelmanism is a true philosophy of living for ordinary sensible people who wish to make the best of themselves at all times and under all circumstances.

Easy to Follow

Half an hour a day of spare time for a few weeks is enough. Everything is simply set out and described and no drudgery is entailed. The books are printed in a handy "pocket size," so that you can study them in odd moments during the day. Even the busiest man or woman can spare a few minutes daily for Pelmanism, especially when minutes so spent bring in such rich rewards.

HOW TO LEARN LANGUAGES

The Pelman Languages Institute teaches French, German, Spanish, and Italian without translation. Write for particulars and specimen lesson of the language that interests you, which will be sent gratis and post free.

Reaucou fees for Her Majesty's Forces.
Pelman Languages Institute
200 Norfolk Mansions, Wigmore Street
London, W.1

What Pelmanism Does

Pelmanism enables you to overcome defects and failings. Amongst those most often met with are the following:

Inertia	Pessimism
Timidity	Forgetfulness
Indecision	Indefiniteness
Depression	Procrastination
Weakness of Will	Mind-Wandering

But Pelmanism does more than eliminate failings. It awakens dormant faculties. It develops powers you never thought you possessed. It strengthens mental attributes which are valuable in every career and every aspect of living. It develops:—

—Optimism	—Initiative
—Judgment	—Reliability
—Self-Control	—Will-Power
—Concentration	—Resourcefulness
—Self-Confidence	—Presence of Mind

*Reduced fees for members of
Her Majesty's Forces.
(Apply for Services Enrolment Form.)*

Pelmanists are not left to make the applications themselves. An experienced and sympathetic instructional staff shows them, in exact detail, how to apply the principles of Pelmanism to their own circumstances and aspirations. Thus every Pelman Course is an individual Course.

The general effect of the training is to induce an attitude of mind and a personal efficiency favourable to the happy management of life.

Send for the Free Book

The Pelman Course is simple and interesting and takes up very little time; you can enrol on the most convenient terms. The Course is fully described in *The Science of Success*, which will be sent you, gratis and post free, on application to:—

ELECTRICAL EQUIPMENT

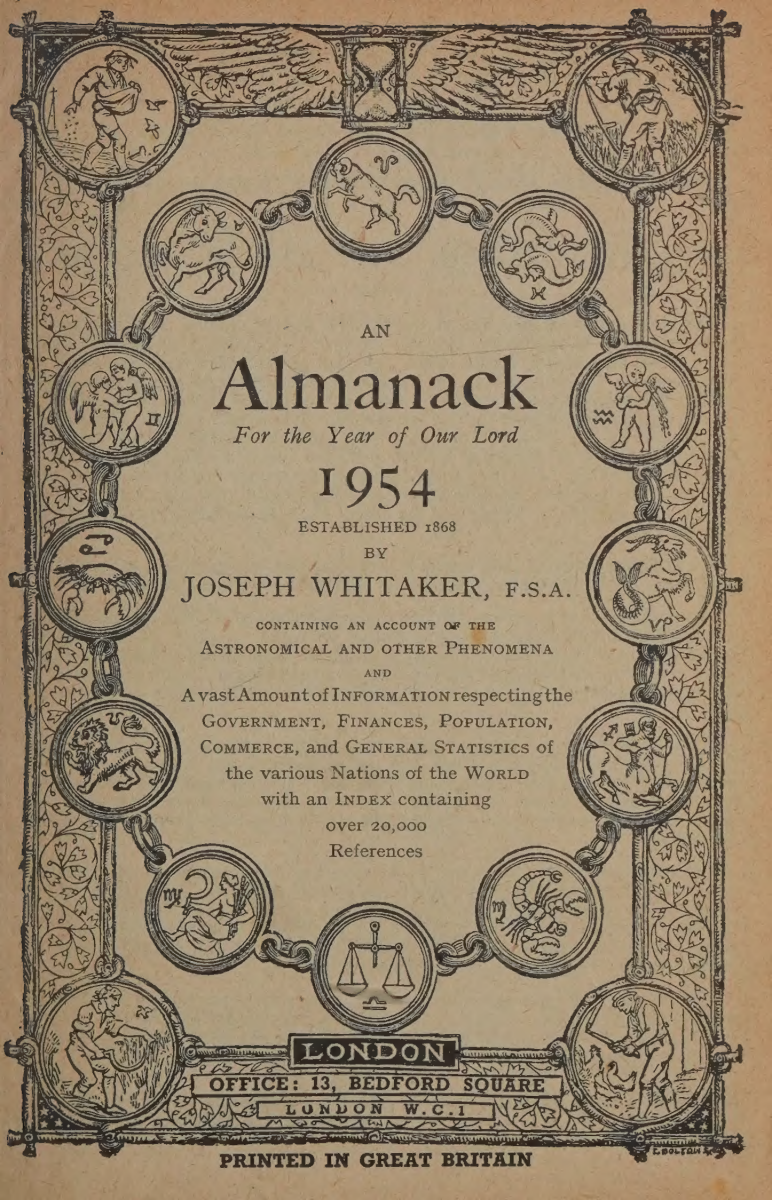

Behind the World's Great Tasks

Those who design the plant by which the world's great engineering projects become real insist on BTH electrical equipment—to generate current, to drive mills and presses, to control intricate operations and processes. They know that the unchallenged reputation for reliability of BTH products offers the safeguard they need against breakdown in service.

Note—"WHITAKER" for 1954 is published in three editions:—

**Library Edition, Leather Binding with 16 Coloured Maps,
1,190 pages - 30s. net**

**Complete Edition, Red and Green Cloth Cover,
1,190 pages - 15s. net**

Shorter Edition, Orange Paper Cover, 694 pages - 7s. 6d. net

PREFACE TO THE 86TH ANNUAL VOLUME

(1954)

The most important new feature in the 86th annual volume of "WHITAKER" is the section of illustrations. For the first time in the history of the Almanack, some of the outstanding events of the past year are recorded in sixteen pages of photographs. This innovation was thought to be particularly appropriate in the edition which chronicles the Coronation Year of Queen Elizabeth II, with the Coronation itself and its attendant ceremonies. It is hoped that the inclusion of illustrations in "WHITAKER" may not only prove of current interest, but may enhance the value of successive editions in future years as a record of the events which they portray. For their kind co-operation in enabling him to obtain and reproduce photographs, the Editor is especially grateful to the Joint Committee of the Royal Geographical Society and the Alpine Club, Messrs. Hodder & Stoughton and *The Times*.

The addition of illustrations brings the total number of pages to 1,190 and makes the present book the largest edition of the Almanack yet to be published.

The pages devoted to annual summaries, augmented last year by the inclusion of a section on Broadcasting, have been further increased. A diary of the principal events in British Music and Opera has been added, with special reference this year to the music at the Coronation Service, and an article has been included on some of the most important Art and other Exhibitions during the twelve months under review.

It has been found possible to restore much of the information about the great London Teaching Hospitals, which had not appeared in the Almanack since the War, and also to provide particulars about the National Health Service and the benefits obtainable under it. New tables showing the rates levied by English and Welsh Counties supplement the figures which have long been given for Cities and Boroughs.

The article on the United States of America has been entirely recast and much new material incorporated, particularly on American labour and trades unions, state and local government, and air transport. Other items of interest in the Overseas Sections include the provision of the latest details available about the newly constituted Federation of Rhodesia and Nyasaland, considerable expansion of the article on Ceylon, and a new article on Saarland.

The Editor would once again thank the very many correspondents whose help he so gladly acknowledges. In doing so, he would mention particularly the Staffs of Her Majesty's Embassies and Legations and of Colonial Secretariats, who, often amid grave preoccupations, have been very ready to furnish information.

SERVING ALL FORCES

For over thirty years it has been the task of the British Legion to care for those who once served and now suffer—men and women of all ranks and services, their families and dependants.

To-day there are Legion clinics and rehabilitation centres, factories and industries for the disabled, convalescent homes, residential homes for the aged and incapacitated. The country-wide network of local Legion Service Committees provides constant, day-to-day assistance for hundreds of thousands of people yearly.

In recent years the cost of maintaining these manifold commitments has risen steeply; yet after two world wars the demands they must meet are still insistent. The money derived from the annual Poppy Day Appeal—upon which the success of this vast and varied welfare activity so largely depends—is no longer by itself sufficient to cover expenditure. To maintain British Legion benevolent activities at the necessary level individual generosity in the form of donations and legacies is at all times urgently needed.

REED'S SCHOOL

(FOUNDED 1813)

Boys : Cobham, Surrey

Girls : Dogmersfield Park, Hants

- ★ Concerned solely with the education of fatherless boys and girls who have an aptitude for Grammar School work.
- ★ Provides full boarding school facilities.
- ★ Recognised by the Ministry of Education.
- ★ Foundationers are granted considerable reductions (even up to full fees).

Inquiries about the work of the school are always welcome.

PHILIP HORTON, *Secretary*

The FACULTY of SECRETARIES LIMITED (BY GUARANTEE)

Founded in 1930 the Faculty provides a central organisation for Secretaries and Administrative Officers of Public Bodies and Local Government Authorities, and is well represented both at home and abroad including South Africa where there is a large membership.

The examinations have been widely recognised by the Ministry of Labour and by Public and Municipal Undertakings.

Fellows and Associates use the Qualifying letters F.F.C.S., and A.F.C.S., and the distinctive title of "Corporate Secretary".

The official journal is "The Corporate Secretary" published each quarter.

Regulations as to admission to membership, examination syllabus, etc. can be obtained from:

THE REGISTRAR, DEPT. W., G.P.O. BOX 9, GUILDFORD

OCCURRENCES DURING PRINTING

The Royal Family and Court

Oct. 5.—A second son born to the Earl and Countess of Harewood.

Oct. 6.—Lord Adam Gordon appointed Comptroller of the Household of Queen Elizabeth the Queen Mother.

Oct. 12.—It was announced that the Duke of Edinburgh would visit Canada from July 29 to Aug. 17, 1954 to see the British Empire Games in Vancouver and to visit the North-West Territories, including areas within the Arctic Circle.

Oct. 14.—The Queen, with the Duke of Edinburgh and their children, returned to London from Balmoral.

Oct. 17.—The Queen unveiled the memorial at Cooper's Hill, Runnymede to 20,000 Commonwealth airmen of the World War who have no known grave.

Oct. 19.—It was announced that Sir Alan Lascelles, Private Secretary to the Queen, would resign at the end of the year and be succeeded by Sir Michael Adeane.

Politics

Oct. 5.—Mr. Eden resumed his duties as Foreign Secretary after his illness.

Oct. 10.—At the conclusion of the Conservative Party Conference at Margate, the Prime Minister, speaking for the first time since his illness, addressed a large meeting.

Oct. 13.—Mr. W. J. Field, Labour M.P. for North Paddington, announced that he would apply for the Chiltern Hundreds (by-election pending).

Oct. 14.—Mr. Butler, speaking at the annual Mansion House dinner to bankers and merchants of City of London, said that in the first half of 1953 the United Kingdom had a payments surplus on current account of £80,000,000.

Municipal

Sept. 29.—Sir Noel Bowater, Bt., Alderman of Castle Baynard Ward, elected Lord Mayor of London for 1953-54.

Home

Oct. 6.—Award announced of posthumous George Cross to Radio Officer David Broadfoot, of the ferry ship *Princess Victoria*, which sank off the Irish coast in January.

Ecclesiastical

Oct. 1.—The Rev. Canon R. R. Williams, Principal of St. John's College, Durham, nominated Bishop of Leicester.

Oct. 7.—The Rev. Canon K. V. Ramsey, Rector of Emmanuel, Didsbury, appointed Suffragan Bishop of Hulme.

Aviation

Oct. 4.—Lieut. Comdr. J. B. Verdin (U.S.A.) in a Douglas Skyray jet, set up a new air speed record of 753.4 m.p.h. in California.

Oct. 9.—Air Race from London to Christchurch, New Zealand, won by Flt. Lt. R. L. F. Burton in an English Electric Canberra PR3. His time was 23 hours 52 minutes. The transport section of the race was won by the K.L.M. (Royal Dutch Airlines) Douglas Liftmaster.

Oct. 14.—A Convair 240 two-engined aircraft belonging to the Sabena Company crashed shortly after leaving the Frankfurt airport for Brussels. All 40 passengers (including Sir George and Lady Franckenstein) and the four members of the crew were killed.

Labour

Oct. 1-6.—Strike among dockers at Birkenhead, later spreading to Liverpool and involving over 6,000 men.

Oct. 7.—Engineering employers rejected claim of Confederation of Shipbuilding and Engineering Unions for a 15 per cent. increase for 2,500,000 employees.

Oct. 12.—Award of 1s. 6d. per day increased pay to dockworkers announced.

Commonwealth

Oct. 8.—It was announced that in the most successful action yet taken against a single gang in Kenya, 45 terrorists had been killed.

Oct. 12.—Mr. Dudley Senanayake, Prime Minister of Ceylon, resigned owing to ill health, and was succeeded by Sir John Kotelawala.

Oct. 15.—A British atomic weapon was successfully exploded at the Woomera range in Australia.

British Guiana

Oct. 6.—Colonial Office announced that the intrigues of Communists and their associates, some in Ministerial posts, threatened the welfare and good administration of British Guiana and that in consequence naval and military forces had been sent to Georgetown to preserve peace and order.

Oct. 7.—The cruiser *Superb* and two frigates arrived at Georgetown with 500 men of the Royal Welch Fusiliers.

Oct. 9.—H. M. Government decided on suspension of British Guiana Constitution, and the Governor withdrew the portfolios of the party Ministers.

Oct. 11.—The British Guiana People's Progressive Party called for a general strike.

Oct. 13.—Police and troops raided 40 houses in Georgetown, including those of leaders of the People's Progressive Party.

U.S.A.

Oct. 8.—Mr. James P. Mitchell, Assistant Secretary of the Army, appointed Secretary of Labour.

Oct. 14.—In by-election for the House of Representatives in ninth Congressional district of Wisconsin, the Democratic candidate gained a seat from the Republicans which had never previously been held by the Democrats.

Oct. 16.—Twenty-seven men killed and 40 injured in explosion followed by fire on the United States aircraft-carrier *Leyte* in dry dock at Boston.

Foreign and International

Oct. 1.—Ibrahim Abdel Hadi, former Prime Minister of Egypt, sentenced to death on a charge of treason. The sentence was later commuted to life imprisonment.

Oct. 12.—The U.S.A. and Greece signed an agreement under the North Atlantic Treaty whereby American forces would have the use of Greek military bases.

Oct. 15.—French and Viet Nameese forces launched a large-scale offensive south-west of the Tonkinese delta in Indo-China.

Out of 500 Chinese anti-Communist prisoners in Korea interviewed at the first day's "explanations" by Communists, only 10 chose to be repatriated.

Sir Winston Churchill formally accepted the offer of the 1953 Nobel Prize for Literature.

Oct. 16.—Mr. Eden, Mr. Dulles and M. Bidault met in London to discuss problems of common interest.

British Ambassador at Tel Aviv instructed to convey the Government's "sense of horror" at Israeli attack on Jordan border villages, in which over 40 persons were killed.

Foreign Office published text of Note to Chinese Communist Government demanding £20,000 compensation for the attack made on Royal Naval motor launch on Sept. 9.

One thousand anti-Communist North Korean prisoners refused to be interviewed by the explanation teams.

Oct. 18.—British, U.S. and French Governments proposed to the Russians a conference of Foreign Ministers of the four Powers at Lugano on Nov. 9 to discuss Germany and Austria.

Oct. 19.—United Nations Security Council met to discuss the situation in the Middle East arising from the raids across the Jordan frontier.

Trieste

Oct. 8.—The British and United States Governments announced the abolition of Allied Military Government in Trieste and the withdrawal of their troops from the Free Territory. Zone A would be administered by the Italians.

Oct. 9.—Yugoslav Government delivered a Note of protest to the British and American representatives.

Oct. 11.—Marshal Tito declared that if Italian troops set foot in Zone A, Yugoslav forces would also move in.

Oct. 12.—Yugoslavia proposed to the British, United States and Italian Governments a four-power conference to examine the situation. The U.S.S.R., in a Note protesting against the Anglo-American action, called it a grave violation of the Italian Peace Treaty.

Oct. 13.—Mr. Vyshinsky asked for a meeting of the Security Council to consider proposals for making Trieste an independent territory.

Oct. 17.—The Italian Prime Minister, Signor Pella, said that his Government would be compelled to resign if the Western allies revoked their decision to hand over the administration of Trieste and Zone A to Italy.

Obituary

Oct. 2.—Arthur Claud Spencer Chichester, 4th Baron Templemore, P.C., K.C.V.O., D.S.O., O.B.E., aged 73. Sir Herbert Dunnico, former Labour M.P. and Deputy Speaker, aged 77. Arthur Paul Boissier, former Headmaster of Harrow, aged 71. Oct. 3.—Sir Arnold Bax, K.C.V.O., Master of the Queen's Music, aged 69. Vice-Admiral Gordon Campbell, P.C., D.S.O., "Q" Boat commander in First World War and later M.P., aged 67. Oct. 8.—Joseph Montague Kenworthy, 10th Baron Strabolgi, ex-Liberal and Labour M.P., aged 67. George Richard James Hennessy, O.B.E., 1st Baron Windlesham, former Conservative Whip, aged 76. Kathleen Ferrier, C.B.E., leading British contralto, aged 41. Oct. 9.—Hastings William Sackville Russell, 12th Duke of Bedford, aged 64 (accidentally shot). Oct. 10.—Lieut.-Col. Sir Cecil Bingham Levita, K.C.V.O., C.B.E., former Chairman of L.C.C., aged 86. Oct. 14.—Sir George Franckenstein, G.C.V.O., former Austrian Ambassador to Great Britain and naturalized Englishman since 1938 (killed in air crash). Oct. 16.—Rt. Hon. Sir Humphrey Francis O'Leary, Chief Justice of New Zealand, aged 67. Oct. 19.—Sir Arthur Middleton, Chairman of the L.C.C., aged 61.

PHENOMENA

January 2. Earth at Perihelion, i.e. at least distance (91,300,000 miles) from the Sun.

2d 21h. Mars in conjunction with Saturn. Mars 1° 3 S.

5. Annular Eclipse of the Sun. See page 148.

11. Uranus in opposition.

14. Mercury in superior conjunction with the Sun.

16d 1h. Jupiter in conjunction with the Moon. Jupiter 4° S.

18-19. Total Eclipse of the Moon. See page 148.

27d 13h. Saturn in conjunction with the Moon. Saturn 8° N.

28d 15h. Mars in conjunction with the Moon. Mars 6° N.

30. Venus in superior conjunction with the Sun.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
Dec. 1 24	Dec. 16 23	
Jan. 1 25	Jan. 16 21	
Feb. 1 20	Feb. 15 19	

Draco (below the Pole),
Ursa Minor (below the Pole),
Camelopardus, Perseus, Auriga, Taurus,
Orion, Eridanus and Lepus.

PHASES OF THE MOON

	d h m
● New Moon.....	5 02 21
☾ First Quarter.....	12 00 22
○ Full Moon.....	19 02 37
☾ Last Quarter.....	27 03 28

	d h m
Perigee (229,760 miles) ..	10 10
Apogee (251,450 ") ..	25 12

Mean Longitude of Ascending
Node on January 1, 1954.

MONTHLY NOTES

January 1. New Year's Day.

— Bank Holiday in Scotland. Dog licences renewable.

— County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Dec. 25 last.

6. *Old Christmas Day. Dividends on Consols, etc. due.

7. Christmas Fire Insurances must be paid.

* See note, page 96.

** Centenary.

Mean semi-diameter in arc 16'.3; in time 1m 10s.

* In the sense Apparent minus Mean. Throughout January subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at superior conjunction on the 14th and will not be visible this month.

VENUS is also too close to the Sun to be seen this month.

MARS is a morning star in Libra, and grows brighter (mag. +1.6 to +1.2) during the month. The planet passes 2° south of Saturn on January 2.

JUPITER came to opposition last month (Dec. 13) and is now an evening star moving retrograde in Taurus. It is a conspicuous object (mag. -2.2) north of the brilliant stars of Orion, and east of

Aldebaran. Phenomena of Jupiter's four great satellites are given on p. 152.

SATURN is a morning star, moving direct on the borders of Virgo and Libra, and is brighter (mag. +0.8) than Mars. The two planets are close together at the beginning of the month.

URANUS is in opposition on January 11. It is visible in a field-glass as a sixth magnitude star about 2° east of the star δ Geminorum; in a small telescope the planet has a recognisable disc of diameter 4".

There will be a total eclipse of the Moon on the night of the 18th. The eclipse begins after midnight, and the total phase lasts for about half an hour (see p. 148).

Mean semi-diameter in arc 16'.2; in time 1m 07s.

* In the sense Apparent minus Mean. Throughout February subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY reaches eastern elongation on February 13, and may be seen as an evening star low in the south-west just after sunset, particularly during the period February 9-16.

VENUS is still too close to the Sun to be seen this month.

MARS moves from Libra into Scorpio and passes 5° north of Antares on the 25th. This will afford an opportunity of comparing the colour of Mars (mag. +1.2 to +0.8) with that of "the rival of Mars", whose magnitude is +1.2.

JUPITER reaches a stationary point in Taurus on the 10th, and then moves direct. Although rather less bright (mag. -2.0) it is still the most brilliant object in the evening sky.

SATURN is a morning star in Libra and now rises before midnight. The planet reaches a stationary point on February 18, and then begins its westerly movement. Saturn's largest satellite, Titan, may be seen in a small telescope, especially at the times of elongation. Eastern elongations of Titan occur on Feb. 4 and 20, and western elongations on Feb. 12 and 28.

PHENOMENA

March 1. Mercury in inferior conjunction with the Sun.

11^d 13^h. Jupiter in conjunction with the Moon. Jupiter 3° S.

21^d 4^h. Sun enters sign Aries (Equinox).

23^d 2^h. Saturn in conjunction with the Moon. Saturn 8° N.

26^d 15^h. Mars in conjunction with the Moon. Mars. 3° N.

28. Mercury at greatest Western elongation (28°).

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
Feb. 1 24	Feb. 15 23	
Mar. 1 22	Mar. 16 21	
April 1 20	April 15 19	

Cepheus (below the Pole), Camelopardus, Lynx, Gemini, Cancer, Leo, Canis Minor, Hydra, Monoceros, Canis Major and Puppis (Argo).

PHASES OF THE MOON

	d h m
● New Moon.	5 03 11
☾ First Quarter.	11 17 51
○ Full Moon.	19 12 42
☾ Last Quarter.	27 16 14

	d h
Perigee (223,440 miles)...	6 10
Apogee (252,410 ")...	21 18

Mean Longitude of Ascending Node on March 1, 292°.

MONTHLY NOTES

March 1. Auditors of Boroughs, Eng. and W., to be elected.

3. Lent begins (ends midnight April 17).

8. Last day for sending list of persons employed in factories.

17. Bank Holiday in Northern Ireland.

25. Lady Day. Quarter Day. Accounts of Local Government Authorities, Eng. and W., to be made up to 31st. Quarter Sessions to be held 21 days before or after this date.

—. Greek Independence Day (1821).

31. Financial Year 1953-54 ends.

** Centenary

Mean semi-diameter in arc 16'.1; in time 1m 05s.

* In the sense Apparent minus Mean. Throughout March subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is in conjunction on March 1, and for most of the month is too close to the Sun to be visible.

VENUS begins to appear this month as an evening star, low in the west at sunset.

MARS grows rapidly brighter (mag. +0.8 to +0.2) as the earth overtakes it, and moves into Ophiuchus during the month. The planet is now a conspicuous object in the morning sky some degrees to the east of Antares.

JUPITER is moving direct in Taurus and is visible until well after midnight in the western sky.

SATURN is approaching opposition and growing brighter (mag. +0.5). It is now visible before

midnight. Titan is at eastern elongation on March 8 and 24, and at western elongation on March 16.

ASTRONOMERS ROYAL

John Flamsteed	1675-1719
Edmund Halley	1720-1742
James Bradley	1742-1762
Nathaniel Bliss	1762-1764
Nevil Maskelyne	1765-1811
John Pond (d. 1836)	1811-1835
Sir George Biddell Airy (d. 1892)	1835-1881
Sir William Henry Mahoney Christie (d. 1922)	1881-1910
Sir Frank Watson Dyson (d. 1939)	1910-1933
Sir Harold Spencer Jones	1933-

PHENOMENA

April 4^d 18^h. Venus in conjunction with the Moon. Venus 6° S.

8^d 3^h. Jupiter in conjunction with the Moon. Jupiter 3° S.

15. Neptune in opposition.

19^d 5^h. Saturn in conjunction with the Moon. Saturn 8° N.

23^d 17^h. Mars in conjunction with the Moon. Mars 1° N.

26. Saturn in opposition.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
Mar. 1 24	Mar. 16 23	
April 1 23	April 15 21	
May 1 20	May 16 19	

Cepheus (below the Pole), Cassiopeia (below the Pole), Ursa Major, Leo Minor, Leo, Sextans, Hydra and Crater.

PHASES OF THE MOON

d h m

- New Moon 3 12 25
- ☾ First Quarter 10 05 05
- Full Moon 18 05 48
- ☾ Last Quarter 26 04 57

d h

- Perigee (221,870 miles) ... 3 20
- Apogee (252,570 ") ... 17 20
- Mean Longitude of Ascending Node on April 1, 290°.

According to the Summer Time Act, 1925, Summer Time 1954 should begin at 2 A.M. on April 11 and should end on October 3 at 2 A.M., but other dates may be fixed by Order in Council.

MONTHLY NOTES

April 1. All Fools' Day.

— Refreshment House Licences to be renewed.

5. Income Tax Year (1953-54) ends. 6. Old Lady Day.

8. Lady Day Fire Insurances must be paid.

15. County Sheriffs (Eng. and W.) begin term of office.

16. Good Friday. Banks and Stock Exchange closed.

17. Lent ends at midnight.

18. First day of Jewish Passover.

19. Bank and General Holiday, England, Wales and N. Ireland.

22. Israel State Day.

Mean semi-diameter in arc 16'.0; in time 1m 05s.

* In the sense Apparent minus Mean. From April 1-16 apply as in March (see page 101) and for the remainder of the month as in May (see page 109).

MORNING AND EVENING STARS

MERCURY remains too close to the Sun to be seen*

VENUS is a brilliant evening star, setting more than an hour after the Sun.

MARS enters Sagittarius at the beginning of April. It continues to grow brighter, but is well south of the equator, rising in the south-east in the early hours of the morning.

JUPITER is still visible as a brilliant evening star (mag. -1.6) in Taurus, but now sets before midnight.

SATURN is at opposition on the 26th in the eastern part of the constellation Virgo. The planet is brighter (mag. +0.4) than it has been for some years, owing to the increased angle of tilt of the rings. Titan is at western elongation on April 1 and 17, and at eastern elongation on April 9 and 25.

NEPTUNE is at opposition on the 15th, but is only of the 8th magnitude. Its position is then 4° north-east of *Spica*, and it may be seen in a small telescope as a disc of diameter 2".

THE SPIRAL STRUCTURE OF THE GALAXY. Several independent proofs of the spiral structure of our Galaxy have been developed during 1952. The area so far investigated covers part of the Milky Way from Monoceros northwards through Taurus to Cygnus, and there seems no doubt that this region consists of two spiral arms, the nearer of which comes close to the Sun, while the other arm is some 5,000 light-years distant.

The main proof depends on improved measures of the distances of certain very hot stars (spectral types O and B) which are known to excite luminosity in galactic nebulae. The distances fall into

Mean semi-diameter in arc 15'.8; in time 1m 07^s.

* In the sense Apparent *minus* Mean. Throughout May add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at superior conjunction on May 8, but may be glimpsed at the end of the month as an evening star. The planet may be found 2° north of Jupiter on the evening of May 31.

VENUS is a conspicuous object in the evening sky (mag. -3.4), passing north of Aldebaran on the 7th, and setting more than 2 hours after the Sun at the end of the month. Venus passes 1½° north of Jupiter on the 23rd.

MARS reaches a stationary point in Sagittarius

on the 23rd. By the end of the month it is brighter than Jupiter, and rises in the south-east before midnight.

JUPITER is now approaching conjunction with the Sun, but is still visible for about an hour after sunset. At the end of the month it moves from Taurus into Gemini. (Mag. -1.5)

SATURN is now visible all night, and is conspicuous in a rather barren part of the sky to the east of Spica. Titan may be seen at western elongation on May 2 and 18, and at eastern elongation on May 10 and 26.

Mean semi-diameter in arc 15'.8; in time 1^m 09^s.

* In the sense Apparent *minus* Mean. From June 1-14 apply as in May (see page 109) and for the remainder of the month as in July (see page 117).

MORNING AND EVENING STARS

MERCURY is at greatest elongation as an evening star on June 9. It is somewhat difficult to see on summer evenings, but may be looked for in the period June 5 to 12 after sunset in the western sky.

VENUS is still a brilliant evening star (mag -3.4) and passes south of Castor and Pollux during the month.

MARS is visible all night, being at opposition on the 24th. It is a brilliant object (mag. -2.3 on June 24), its orange colour making it outstanding even among the bright stars of Sagittarius. The

planet is, however, far south of the equator, and reaches an altitude of only 20° in southern England.

JUPITER is not visible, being in conjunction with the Sun on the 30th.

SATURN is an evening star (mag. +0.5 to 0.7) and is beginning to fade as its distance from the earth increases.

An important event this month is the total eclipse of the Sun on June 30, the line of totality passing north of the British Isles and across southern Norway and Sweden. The eclipse is visible in this country as a partial eclipse, beginning shortly after 11 o'clock. (See p. 148).

PHENOMENA

July 3d 15h. Venus in conjunction with the Moon. Venus 5° N.

3. Earth at Aphelion, i.e. at greatest distance (94,500,000 miles) from the Sun.

6. Mercury in inferior conjunction with the Sun.

9d 18h. Saturn in conjunction with the Moon. Saturn 8° N.

10d 17h. Mercury in conjunction with Jupiter. Mercury 5° S.

14d 0h. Mars in conjunction with the Moon. Mars 3° S.

15—16. Partial Eclipse of the Moon. (See page 148).

16. Uranus in conjunction with the Sun.

27. Mercury at greatest western elongation (20°).

28d 0h. Mercury in conjunction with Jupiter. Mercury 1° 9 S.

28d 8h. Jupiter in conjunction with the Moon. Jupiter 0°.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
June 1 24	June 15 23	
July 1 22	July 16 21	
Aug. 1 20	Aug. 16 19	

Ursa Minor, Draco, Corona, Hercules, Lyra, Serpens, Ophiuchus, Libra, Scorpio and Sagittarius.

PHASES OF THE MOON

	d h
Apogee (251,260 miles)...	9 08
Perigee (229,640 ..)...	23 19

Mean Longitude of Ascending Node on July 1, 285°.

See note on Summer Time, page 104

MONTHLY NOTES

- July 1. Special Sessions for Licences to deal in Game to be held
 3. Dog Days begin (end Aug. 15). [this month.
 5. Dividends due. Tynwald Day, Isle of Man.
 6. *Old Midsummer Day.
 8. Midsummer Fire Insurances to be paid.
 12. Bank and General Holiday, Northern Ireland.
 15. Latest date for receiving corrections for next year's
 "WHITAKER."
 21. Belgian Independence Day (1831).
 31. Gun and Game Licences expire.

* See note, p. 96.

** Centenary

Mean semi-diameter in arc 15'.8; in time 1^m 08^s.

* In the sense Apparent minus Mean. Throughout July subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at greatest elongation on the 27th, and may possibly be seen in the dawn at the end of the month. It passes about 2° south of the brighter Jupiter on the morning of the 28th.

VENUS passes 1° north of *Regulus* on the 12th. The planet is now a little brighter (mag. -3.6) but it is moving rapidly south and sets less than 2h after the Sun.

MARS is an evening star and reaches a stationary point on the borders of *Sagittarius* and *Ophiuchus* on the 29th. Owing to the eccentricity of the orbit of Mars, the closest approach to the earth takes place on July 2, which is 8 days after opposition, and at this time the planet will be 40 million

miles from the Earth. This is the closest approach since 1939 (although the 1956 opposition will be even more favourable) and the apparent diameter of the planet will be 22".

JUPITER is still close to the Sun, but may perhaps be seen as a morning star in the north-east before sunrise at the end of the month.

SATURN sets before midnight, and reaches a stationary point in *Virgo* on July 7. Western elongations of Titan occur on July 5 and 21, and eastern elongations on July 13 and 29.

There is a partial eclipse of the Moon on the night of July 15th, when rather less than half of the Moon's disc will be darkened by the earth's shadow at midnight. (See p. 148).

Mean semi-diameter in arc 15'.8; in time 1m 05s.

* In the sense Apparent minus Mean. Throughout August subtract from mean time to get apparent time, or add to apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY may be visible as a morning star during the first few days of August, but is too close to the Sun during the remainder of the month.

VENUS now moves south of the equator, and on the evening of the 30th will be seen in the west at sunset very close to the first magnitude star *Spica*.

MARS is now moving direct in Sagittarius and sets before midnight in our latitudes. The increasing distance of the Earth from Mars causes the brightness of the planet to decrease (mag. -1.7 to -1.0) but it is still a brilliant object in the evening sky.

JUPITER is a morning star in Gemini (mag. -1.5) and may be seen before sunrise below and to the west of *Castor* and *Pollux*. The planet rises on the 25th close to the 26-day-old Moon.

SATURN is still visible as an evening star, although it has now faded to magnitude +0.9.

The Perseid meteor shower is usually well seen during the first half of this month, and reaches a maximum about Aug. 12. There will be some interference to evening observations from moonlight, but this will be less troublesome after midnight, when the number of meteors visible is always greatest.

PHENOMENA

September 1: 15h. Venus in conjunction with the Moon. Venus 3° N.

21 14h. Saturn in conjunction with the Moon. Saturn 7° N.

6. Venus at greatest eastern elongation (46°).

71 10h. Mars in conjunction with the Moon. Mars 3° S.

161 35. Venus in conjunction with Saturn. Venus 6° 1 S.

210 16h. Jupiter in conjunction with the Moon. Jupiter 1° N.

233 14h. Sun enters sign Libra (*Equinox*).

304 2h. Saturn in conjunction with the Moon. Saturn 7° N.

304 22h. Venus in conjunction with the Moon. Venus 1° S.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
Aug. 1 24	Aug. 16 23	
Sept. 1 22	Sept. 15 21	
Oct. 1 20	Oct. 16 19	

Draco, Cepheus, Lyra, Cygnus, Vulpecula, Sagitta, Delphinus, Equuleus, Aquila, Aquarius and Capricornus.

PHASES OF THE MOON

	d h m
First Quarter.....	5 12 28
Full Moon.....	12 20 19
Last Quarter.....	19 11 11
New Moon.....	27 00 50

	d h
Apogee (251,660 miles)...	2 22

Apogee (252,290 ")...	30 14
Mean Longitude of Ascending Node on September 1, 282°.	

See notes on *Summer time*, page 128

MONTHLY NOTES

September 1. Partridge shooting begins. Salmon close-time begins. Lists of jurors to be affixed to church doors for the first three Sundays.

8. Malta's National Day (1965).

12. Harvest Moon.

28. Jewish New Year (A.M. 5715).

—, Sheriffs of London to be sworn in.

29. Michaelmas. Quarter day. Lord Mayor of London elected.

—, County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Sept. 29.

Mean semi-diameter in arc 15'.9; in time 1m 04s.

* In the sense Apparent *minus* Mean. Except on September 1 (when the rule is reversed) add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

Continued from page 105

MERCURY is too close to the Sun to be seen this month.

VENUS reaches greatest elongation as an evening star on the 6th, but it is now well south of the Sun, and very low in the west at sunset. Venus will be in conjunction with Saturn on the 16th, but the two planets will be 6° apart.

MARS is still very low in Sagittarius, and is now fading rapidly (mag. -1.0 to -0.4). It is, however, much brighter than any of the surrounding stars.

JUPITER is growing brighter (mag. -1.6) and rises before midnight at the end of the month.

SATURN may still be seen for a short time after sunset. The direct movement of the planet has now carried it once again to the borders of Libra and Virgo.

two distinct groups and plainly show the presence of these two portions of the spiral. Other lines of research are based on the fact that such a spiral must be in rotation. Radio measurements on a wavelength of 21 cm (a characteristic radiation due to hydrogen) enable the radial velocities of the excited hydrogen sources to be determined. Similar measurements in visual light have also been made, and in both cases the presence of two distinct arms, with velocities of a different order, has been demonstrated. Finally, the spectral absorption lines shown by some stars, and due to interstellar gases, have been shown to be single in the stars of the nearer arm, but double in the outer arm, from which light has to cross two lanes of absorbing gases. Thus the stars of our Galaxy can no longer be regarded as distributed at random, but as forming part of the pattern of a spiral nebula.

PHENOMENA

October 5^d 24^h. Mars in conjunction with the Moon. Mars 4° S.

6. Mercury at greatest eastern elongation (26°).

9^d 11^h. Mercury in conjunction with Saturn. Mercury 5° 6 S.

11. Venus at greatest brilliancy.

19^d 4^h. Jupiter in conjunction with the Moon. Jupiter 2° N.

19. Neptune in conjunction with the Sun.

24^d 11^h. Mercury in conjunction with Saturn. Mercury 4° 7 S.

28^d 23^h. Venus in conjunction with the Moon. Venus 3° S.

29. Mercury in inferior conjunction with the Sun.

CONSTELLATIONS

The following constellations are near the meridian at

	d	h		d	h
Sept.	1	24	Sept.	15	23
Oct.	1	22	Oct.	16	21
Nov.	1	20	Nov.	15	19

Ursa Major (below the Pole), Cepheus, Cassiopeia, Cygnus, Lacerta, Andromeda, Pegasus, Capricornus, Aquarius, and Piscis Austrinus.

PHASES OF THE MOON

	d	h	m
☾ First Quarter	5	05	31
○ Full Moon	12	05	10
☾ Last Quarter	18	20	30
● New Moon	26	17	47
	d	h	
Perigee (222,470 miles)...	13	02	
Apogee (252,660 ..)...	27	23	
Mean Longitude of Ascending Node on October 1, 280°.			

According to the Summer Time Act, 1925, Summer Time 1954 should begin at 2 A.M. on April 11 and should end on October 3 at 2 A.M., but other dates may be fixed by Order in Council.

MONTHLY NOTES

October 2. Pheasant shooting begins.

7. Yom Kippur (Jewish Day of Atonement).

11. *Old Michaelmas Day.

12. Columbus Day, U.S.A.

— Hunter's Moon.

14. Michaelmas Fire Insurances must be paid.

29. Turkish National Holiday.

* See note, p. 96.

** Centenary

Mean semi-diameter in arc 16'.1; in time 1m 05s.

* In the sense Apparent minus Mean. Throughout October add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at greatest elongation on the 6th, but is too far south of the Sun to be visible.

VENUS is at greatest brilliancy on Oct. 11, but is very low in the south-west, and sets shortly after the Sun.

MARS is now moving north, and enters Capricorn at the end of the month. The rapid northerly movement has the effect of prolonging the appear-

ance of the planet, which sets at about the same time each evening for several months.

JUPITER is a brilliant morning star (mag. -1.8) and may be seen in the east just before midnight. It is moving direct below the bright stars *Castor* and *Pollux*, and enters Cancer at the beginning of October. On the 8th, Jupiter passes less than $\frac{1}{2}^{\circ}$ south of Uranus, and the two planets may be seen in the same field in a small telescope.

SATURN is approaching conjunction and is too close to the Sun to be seen.

Mean semi-diameter in arc 16'.2; in time 10m 08s.

★ In the sense Apparent *minus* Mean. Throughout November add to mean time to get apparent time, or subtract from apparent time to get mean time.

MORNING AND EVENING STARS

MERCURY is at greatest elongation on the 15th and may be seen as a morning star in the south-east before sunrise about the dates Nov. 12 to 19.

VENUS is in conjunction with the Sun on the 15th and is not visible during the month.

MARS moves into Aquarius at the end of the month, and although fading rapidly (mag. 0.0 to +0.5) it is still the brightest object in the western evening sky.

JUPITER rises in the early evening and reaches a stationary point in Cancer on the 17th. It is now a brilliant object of magnitude -2.0. Some of the more interesting phenomena of Jupiter's four great satellites are easily visible in a small telescope, and are listed on p. 152.

SATURN is not visible this month, being in conjunction with the Sun on Nov. 5.

THE SIZE OF THE UNIVERSE

Our knowledge of the distances of the external galaxies rests largely on measurements of the absolute magnitudes of Cepheid variables (see p. 154) which are revealed on photographs of these nebulae. Some recent work with the 200-inch telescope at Mt. Palomar has shown that it is necessary to revise the scale on which these measurements are based. It has been found, for instance, that there are two classes of Cepheids, those which are found in the globular clusters (with periods of about half a day) following a different law from the normal Cepheids of longer period. The revision which is now to be made is such that our previous estimates of distances derived in this way must be doubled. Thus M 31, the Great Nebula in Andromeda, is now believed to be at a distance of 1½ million light-years, and since its size must also be doubled it may even be slightly larger than our own Galaxy.

PHENOMENA

December 2d 16h. Mars in conjunction with the Moon. Mars 6° S.

12d 22h. Jupiter in conjunction with the Moon. Jupiter 3° N.

16d 0h. Venus in conjunction with Saturn. Venus 0° 7' N.

21. Venus at greatest brilliancy.

21d 15h. Saturn in conjunction with the Moon. Saturn 6° N.

21d 20h. Venus in conjunction with the Moon. Venus 7° N.

22d 9h. Sun enters sign Capricornus (Solstice).

25. Annular Eclipse of the Sun. (see page 148).

25. Mercury in superior conjunction with the Sun.

31d 12h. Mars in conjunction with the Moon. Mars 6° S.

CONSTELLATIONS

The following constellations are near the meridian at

	d h	d h
Nov. 1 24	Nov. 15 3	
Dec. 1 22	Dec. 16 21	
Jan. 1 20	Jan. 16 19	

Ursa Major (below the Pole), Ursa Minor (below the Pole), Cassiopeia, Andromeda, Perseus, Triangulum, Aries, Taurus, Cetus and Eridanus.

Mean Longitude of Ascending Node on December 1, 277°.

MONTHLY NOTES

December 9. Grouse and Black Game Shooting ends.

15. Last day for renewing solicitors' certificates. Notices to owners and occupiers affected by private Bills in Parliament must be delivered.

16. Dingaan's Day, Union of S. Africa, and Swaziland.

21. Common Council Elections.

25. Quarter Day.

—. County Quarter Sessions, Eng. and W., to be held within the period of 21 days immediately preceding or following Dec. 25.

26 Boxing Day. Bank and General Holiday, Eng. and W., N. Ireland.

31. Various licences expire.

Mean semi-diameter in arc 16'.3; in time 1m 11s.

* In the sense Apparent *minus* Mean. From December 1-25 apply as in November (see page 133) and for the remainder of the month as in January (see page 93).

MORNING AND EVENING STARS

MERCURY is too far south and too close to the Sun to be visible.

VENUS may be seen as a morning star in the south-east before sunrise. On the 16th, it will be less than a degree north of Saturn, while it reaches its greatest brilliancy on Dec. 21.

MARS is still visible as an evening star in Aquarius, but is now much fainter (mag. +0.5 to +0.9). The next opposition, which will be a particularly favourable one, occurs in September 1956.

JUPITER now rises in the early evening and is visible all night. It will have been noticed that there is no opposition of Jupiter in 1954, the mean interval between successive oppositions being 398 days, and the last one having occurred in 1953 December 13. By the end of this month, the magnitude of Jupiter will have reached -2.2.

SATURN is now visible before sunrise as a morning star in Libra (mag. +0.8). The third magnitude star just south of Saturn is a Librae. The next opposition of Saturn occurs in May 1955.

Introduction to Astronomical Section

GENERAL

The astronomical data are given in a form suitable for those who practise naked-eye astronomy or use small telescopes. No attempt has been made to replace the *Nautical Almanac* for professional astronomers. Positions of the heavenly bodies are given only to the degree of accuracy required by amateur astronomers for setting telescopes, or for plotting on celestial globes or star atlases. Where intermediate positions are required, linear interpolation may be employed.

All data are, unless otherwise stated, for 0h G.M.T., or the midnight at the beginning of the day named. No allowance is made for Summer Time, the dates of which are seldom known at the time of going to press.

Definitions of the terms used cannot be given in an ephemeris of this nature. They must be sought in astronomical literature and text-books. Probably the best source for the amateur is Norton's *Star Atlas* (Gall and Inglis, 11th edition, 1950; 17s. 6d.), which contains an excellent introduction to observational astronomy, and the finest series of star maps yet produced for showing stars visible to the naked eye. Certain more extended ephemerides are available in the British Astronomical Association Handbook, an annual very popular among amateur astronomers. (Secretary: 303 Bath Road, Hounslow, Middlesex.)

A special feature has been made of the times when the various heavenly bodies are visible in the British Isles. Since two columns, calculated for latitudes 52° and 56° , are devoted to risings and settings, the range 50° to 58° is covered by interpolation and extrapolation. The times given in these columns are G.M.Ts. for the meridian of Greenwich. An observer west of this meridian must add his longitude (in time) and vice versa. Allowance must also be made for Summer Time or Double Summer Time if in force.

In accordance with the usual convention in astronomy, + and - indicate respectively north and south latitudes or declinations.

PAGE I OF EACH MONTH

The Zodiacal signs through which the Sun is passing during each month are illustrated. The date of transition from one sign to the next, to the nearest hour, is also given.

THE FASTS AND FESTIVALS in black-letter type are those so given in the Prayer Book. The line immediately to the right of the Day of Week is shown heavy when the Law Courts are sitting in London.

Under the heading PHENOMENA will be found particulars of the more important conjunctions of the Sun, Moon and planets with each other, and also the dates of eclipses and other astronomical phenomena of special interest.

THE CONSTELLATIONS listed each month are those that are near the meridian at the beginning of the month at 22h local mean time. Allowance must be made for Summer Time if necessary. The fact that any star crosses the meridian 4m earlier each night or 2h earlier each month may be used,

in conjunction with the lists given each month, to find what constellations are favourably placed at any moment. The table preceding the list of constellations may be extended indefinitely at the rate just quoted.

The principal PHASES OF THE MOON are the G.M.Ts. when the difference between the longitude of the Moon and that of the Sun is 0° , 90° , 180° or 270° . The times of perigee and apogee are those when the Moon is nearest to, and farthest from the Earth, respectively. The nodes or points of intersection of the Moon's orbit and the ecliptic make a complete retrograde circuit of the ecliptic in about 19 years. From a knowledge of the longitude of the ascending node and the inclination, whose value does not vary much from 5° , the path of the Moon among the stars may be plotted on a celestial globe or star atlas.

The MONTHLY NOTES are self-explanatory.

PAGE II OF EACH MONTH

The right ascension given is that of the true Sun. The right ascension of the mean Sun is obtained by applying the equation of time, with the sign given, to the right ascension of the true Sun, or, more easily, by applying 12h to the column Sidereal Time. The direction in which the equation of time has to be applied in different problems is a frequent source of confusion and error. The footnote given each month indicates when the numerical quantities given are to be added and when they are to be subtracted.

The Sidereal Time at 0h and the Transit of the First Point of Aries (which is really the mean time when the sidereal time is 0h) are used for converting mean time to sidereal time and vice versa, as illustrated on pages 143-144.

The time SUN SOUTHS is the G.M.T. of transit of the Sun at Greenwich, or the L.M.T. of transit in any longitude. It is independent of latitude. The G.M.T. of transit in any longitude is obtained by adding the longitude to the time given if west, and vice versa.

The legal importance of SUNRISE and SUNSET is that the Road Transport Lighting Act, 1927, defines Lighting-up Time for vehicles as being from one hour after sunset to one hour before sunrise while Summer Time would normally be in force (April 21 to October 2 inclusive in 1954), and half an hour after sunset to half an hour before sunrise throughout the remainder of the year. In all laws and regulations "sunset" refers to the local sunset, i.e. the time at which the Sun sets at the place in question. This common-sense interpretation has been upheld by legal tribunals. Thus the necessity for providing for different latitudes and longitudes, as already described, is evident.

The times of SUNRISE and SUNSET are those when the Sun's upper limb, as affected by refraction, is on the true horizon of an observer at sea-level. Assuming the mean refraction to be $34'$, and the Sun's semi-diameter to be $16'$, the time given is that when the true zenith distance of the Sun's centre is $90^{\circ} + 34' + 16'$ or $90^{\circ} 50'$, or, in

other words, when the depression of the Sun's centre below the true horizon is $50'$. The upper limb is then $34'$ below the true horizon, but is brought there by refraction. It is true, of course, that an observer on a ship might see the Sun for a minute or so longer, because of the dip of the horizon, while another viewing the sunset over hills or mountains would record an earlier time. Nevertheless, the moment when the true zenith distance of the Sun's centre is $90^\circ 50'$ is a precise time dependent only on the latitude and longitude of the place, and independent of its altitude above sea-level, the contour of its horizon, the vagaries of refraction or the small seasonal change in the Sun's semi-diameter; this moment is suitable in every way as a definition of sunset (or sunrise) for all statutory purposes.

It is well known that light continues to reach us for some time after sunset, and the interval between sunset and darkness is called twilight. Astronomically speaking, twilight is considered to begin and end when the Sun's centre is 18° below the horizon, as no light from the Sun can then reach the observer. As thus defined twilight may last several hours; in high latitudes at the solstices the depression of 18° is not reached, and twilight lasts from sunset to sunrise.

The need for some sub-division of twilight was met some years ago by dividing the gathering darkness into four steps.

(1) *Sunset*, defined as above.

(2) *Civil twilight*, when the Sun's centre is 6° below the horizon. This marks the time when operations requiring daylight must cease. In England it varies from about 30 to 50 minutes after sunset.

(3) *Nautical twilight*, when the Sun's centre is 12° below the horizon. This marks the time when it is, to all intents and purposes, completely dark.

(4) *Astronomical twilight*, when the Sun's centre is 18° below the horizon. This marks theoretical perfect darkness. It is not of practical importance, especially if nautical twilight is tabulated.

These four steps are now tabulated each year in the *Nautical Almanac*. Lighting-up time is a crude (very) attempt to approximate to civil twilight over the British Isles.

Under the heading MORNING AND EVENING STARS will be found notes describing the position and visibility of the planets; these are intended to guide naked-eye observers, or those using small telescopes.

PAGE III OF EACH MONTH

The Moon moves so rapidly among the stars that its position is given only to the degree of accuracy that permits linear interpolation. The right ascension and declination are geocentric, i.e. for an imaginary observer at the centre of the Earth. To an observer on the surface of the Earth the position is always different, as the altitude is always

less by the amount of the horizontal parallax, i.e. nearly $1''$.

The lunar terminator is the line separating the bright from the dark part of the Moon's disc. Apart from irregularities of the lunar surface, the terminator is elliptical, because it is a circle seen in projection. It becomes the full circle forming the limb, or edge, of the Moon at New and Full Moon. The tabulated selenographic longitude of the terminator is measured from the mean centre of the visible disc, which may differ from the visible centre by as much as $8''$, because of libration. A positive sign indicates westerly longitude, or to the right hand, and applies between New Moon and First Quarter or from Full Moon to Last Quarter. A minus sign indicates easterly longitude and applies from First Quarter to Full Moon and from Last Quarter to New Moon. When the Moon is passing from New to Full the line is called the morning terminator because the Sun is rising on the region of the Moon on which it falls; from Full to New it is the evening terminator. As the terminator changes at New or Full Moon, its longitude changes abruptly from -90° to $+90^\circ$. Interpolation between two such values may be performed by taking the complement of either of them to 180° , and changing the sign. Thus the value -83° may be treated as $+97^\circ$, or the value $+85^\circ$ as -95° .

The position angle of the terminator is the position angle of the northern cusp; it is subject to very rapid changes at New and Full Moon. The column PHASE shows the percentage of the area of the Moon's disc illuminated; this is also the illuminated percentage of the diameter at right angles to the line of cusps. The terminator is a semi-ellipse whose major axis is the line of cusps, and whose semi-axis minor is determined by the tabulated percentage; from New Moon to Full Moon the east limb is dark, and vice versa.

A knowledge of the light to be expected from the Moon is of value, especially in war time, as prominent objects and water areas can be easily seen in strong moonlight. Thus the age of the Moon, and its times of local rising and setting (which may vary even more than in the case of the Sun) need to be known. In summer the Full Moon never attains a great height, whereas in winter "the Moon rides high".

The times given as moonrise and moonset are those when the upper limb of the Moon is on the horizon of an observer at sea-level. The Sun's horizontal parallax is about $9''$, and is negligible when considering sunrise and sunset, but that of the Moon averages about $57'$. Hence the computed time represents the moment when the true zenith distance of the Moon is $90^\circ 50'$ (as for the Sun) minus the horizontal parallax. The time required for the Sun or Moon to rise or set is about four minutes.

The tables have been constructed for the meridian of Greenwich, and for latitudes 52° and 56° . They give Greenwich Mean Time (G.M.T.) throughout the year; if Summer Time (B.S.T.) is in force, one hour must be added to get the time shown by civil clocks, or two hours if Double Summer Time is in

force. To obtain the G.M.T. of the phenomenon as seen from any other latitude and longitude, first interpolate or extrapolate for latitude by the usual rules of proportion. To the time thus found the longitude (expressed in time) is to be *added* if west (as it usually is in Great Britain) or *subtracted* if east. If the longitude is expressed in degrees and minutes of arc, it must be converted to time at the rate of $1^\circ = 4^m$ and $15' = 1^m$.

The column MOON SOUTHS gives the G.M.T. of transit of the Moon over the meridian of Greenwich. It is independent of latitude, but must be corrected for longitude. For places in the British Isles it suffices to add the longitude if west, and vice versa. For more remote places a further correction is necessary because of the rapid movement of the Moon relative to the stars. The entire correction is conveniently determined by first finding the west longitude λ of the place. If the place is in west longitude, λ is the ordinary west longitude; if the place is in east longitude λ is the complement to 24^h (or 360°) of the longitude, and will be greater than 12^h (or 180°). The correction then consists of two positive portions, namely λ and the fraction $\lambda/24$ (or $\lambda^\circ/360$) multiplied by the difference between consecutive transits. Thus for Sydney, N.S.W., the longitude is $10^h 05^m$ east, so $\lambda = 13^h 55^m$ and the fraction $\lambda/24$ is 0.58. The transit on the local date 1954 Jan. 10 is found as follows:

	d	h	m
G.M.T. of transit at Greenwich..... Jan. 9	15	54	54
λ		23	55
$0.58 \times (16^h 43^m - 15^h 54^m)$			28
G.M.T. of transit at Sydney.....	20	06	17
Corr. to N.S.W. Standard Time.....		20	00
Local standard time of transit	20	16	17

It is evident, of course, that for any given place the quantities λ and the correction to local standard time may be combined permanently, being here $23^h 55^m$.

Positions of Mercury are given for every third day, and those of Venus and Mars for every fifth day; they may be interpolated linearly. The column PHASE shows the illuminated percentage of the disc. In the case of the inner planets this approaches 100 at superior conjunction and 0 at inferior conjunction. When the phase is less than 50 the planet is crescent-shaped or horned; for greater phases it is gibbous. In the case of the exterior planet Mars, the phase approaches 100 at conjunction and opposition, and is a minimum at the quadratures.

A departure has been made from the former practice of giving the times of rising and setting of the planets, as they cannot be seen when on the horizon. As a new standard of reference by which the visibility may be gauged, the time when the planet has an apparent altitude of 5° has been tabulated. The phenomenon tabulated is the one that occurs between sunset and sunrise; unimportant exceptions to this rule may occur because changes are not made during a month, except in

the case of Mercury. The times given may be interpolated for latitude and corrected for longitude as in the case of the Sun and Moon.

The G.M.T. when the planet souths at Greenwich is also given; it follows columns relating to times when the planet is in the east and precedes those relating to times when the planet is in the west. By this arrangement the times given for any date are consecutive, but it has sometimes been necessary to extend the hours beyond 24; thus Jan. 22d 26h is the same as January 22d 02h. The times of transit are to be corrected to local meridians in the usual way, as already described.

PAGE IV OF EACH MONTH

The G.M.Ts. of Sunrise and Sunset may be used not only for these phenomena, but also for Lighting-up Times, which are from one hour after sunset to one hour before sunrise from April 11 to October 2 inclusive, and from half an hour after sunset to half an hour before sunrise throughout the rest of the year.

The particulars for the four outer planets resemble those for the planets on Page III of each month, except that, under Uranus and Neptune, times when the planet is 10° -high instead of 5° high are given; this is because of the inferior brightness of these planets. The polar diameter of Jupiter is about $1''$ less than the equatorial diameter, while that of Saturn is about $2''$ less. The diameters given for the rings of Saturn are those of the major axis (in the plane of the planet's equator) and the minor axis respectively. The former has a small seasonal change due to the slightly varying distance of the Earth from Saturn, but the latter varies from zero when the Earth passes through the ring plane every 15 years to its maximum opening half-way between these periods. The rings were completely closed in September, 1950, and now they will slowly widen until they reach their next maximum opening in 1958.

TIME

Greenwich Mean Time

Time is measured by the rotation of the Earth, and a solar day is the duration of a complete rotation of our sphere with respect to the Sun; it is 4^m longer than a rotation with respect to the stars, because of the revolution of the Earth round the Sun. The length of the solar day varies for two reasons, namely the ellipticity of the Earth's orbit and the fact that the plane of the equator does not coincide with the plane of the ecliptic. Mean time clocks are adjusted to an average or mean solar day which is of uniform length and is divided into 24 equal hours. The length of the mean solar day is constant, although that of the apparent day, or the interval from one transit of the Sun across the meridian to the next, varies for the reasons given above.

The mean solar day may be regarded as the period of rotation about the earth of a fictitious body called the Mean Sun, whose motion is uniform; and the zero of measurement is the instant when the Mean Sun is on the meridian. At this

instant it is mean noon for all places on that meridian, and Mean Time, measured in this way for some standard meridian, is usually chosen as the standard time for a whole country. It is the use of the meridian of Greenwich which gives rise to the expression Greenwich Mean Time (G.M.T.), which is taken as a standard. For astronomical purposes, G.M.T. is used, the day beginning at midnight, and a 24-hour system being adopted. Thus Greenwich p.m. times, in civil reckoning, must be increased by 12 hours to give G.M.T.

Apparent Solar Time

The time shown by a sundial is called apparent solar time. It differs from mean solar time by the equation of time, which is the total effect of the two causes mentioned that make the length of a solar day non-uniform. The equation of time reaches its maximum values in February (-14^m) and early November ($+16^m$); it has a zero value on four dates during the year, and it is only on these dates (approximately April 15, June 15, September 1 and December 25) that a sundial shows mean time.

Sidereal Time

A sidereal day is the duration of a complete rotation of the Earth with reference to the First Point of Aries. As that point has a slow retrograde motion ($50''$ a year), known as precession, the length of the sidereal day, or $23^h 56^m 04^s.091$ of mean time, is $0^s.008$ less than the true period of rotation. The zero for sidereal time is when the First Point of Aries is on the meridian. In observatory practice sidereal time is found by comparing the observed time of transit of a star, as recorded by a sidereal clock, with the known true time of transit, namely the star's apparent right ascension. Any discrepancy, when adjusted for certain instrumental corrections, is the error of the sidereal clock. From this corrected sidereal time, the error of a mean time clock is found by comparison and computation as described below.

To convert standard mean time to local sidereal time, if many conversions are to be done for any one place, we may form once and for all the constant P , defined as

$$P = \text{longitude of standard meridian} + \text{acceleration corresponding to this longitude} - \text{local longitude}$$

where the acceleration of sidereal on mean time is taken from the table on page 145. West longitudes are considered to be positive, but, to avoid any subtractions, negative values of P may be replaced by their complement to 24^h . Then

$$\text{L.S.T.} = \text{sidereal time at oh G.M.T. (page II of each month)} + P + \text{standard mean time} + \text{acceleration corresponding to this time.}$$

Example.—Required the L.S.T. at Melbourne (Long. = $-9^h 39^m 54^s$) at 1954 February 26^d 12^h 34^m 56^s Standard Time (10^h fast on G.M.T.).

	h	m	s
Long. of standard meridian.....	-10	00	00
Acceleration (same sign).....	-	1	39
Sum	-10	01	39
Local long. with reversed sign....	+ 9	39	54
P.....	-	21	45
Complement to 24 ^h	23	38	15

For the given mean time

	h	m	s
Sidereal time (page 97).....	10	21	14
P, as found above.....	23	38	15
Standard mean time.....	12	34	56
Acceleration from page 147.....	1	58	
(always positive).....			6
Sum = L.S.T.....	22	36	29

One line may be saved by making a special table in which P is combined permanently with the acceleration for integral hours. Such a table for Melbourne would have the entry $23^h 40^m 13^s$ (= $23^h 38^m 15^s + 1^m 58^s$) for the argument 12^h.

To convert local sidereal time to standard mean time we may first form the constant Q from

$$Q = \text{local longitude} - \text{retardation corresponding to this longitude} - \text{longitude of standard meridian.}$$

For Melbourne

	h	m	s
Local longitude.....	- 9	39	54
Retardation from page 147.....	+ 1	28	
(opposite sign).....	+		7
Long. of standard meridian, with reversed sign.....	+10	00	00
Sum = Q.....	+	21	41

We then have

$$\text{Standard mean time} = \text{preceding transit of First Point of Aries (page II of each month)} + Q + \text{L.S.T.} - \text{retardation corresponding to L.S.T.}$$

To reverse the above example, we first note that the L.S.T. is greater than the complement to 24^h of the transit of Aries, so that the transit required is that on Feb. 25.

	d	h	m	s
Transit of Aries (page 97).....	25	13	40	28
Q, as found above.....			21	41
L.S.T.....		22	36	29
Sum.....		26	12	38
Retardation from page 147.....			- 3	36
(always negative).....			-	6
Sum = standard mean time.....		26	12	34

An alternative method is:

$$\text{Standard mean time} = (\text{L.S.T.} - \text{sidereal time at oh G.M.T., as tabulated}) - \text{retardation corresponding to this difference} + Q.$$

In the example	h m s
L.S.T.	22 36 29
Sidereal time at oh.	10 21 14
Difference.	12 15 15
Retardation from page 147.	— 1 58
(always negative)	— 2
Sum.	12 13 15
Q, here positive.	21 41
Sum = standard mean time.	12 34 56

Owing to the omission of decimals of a second from the times given on the monthly pages, the answers obtained by these two methods may differ by one second.

Rhythmic Time Signals

For the purpose of comparing the time shown by a distant clock with that of the Greenwich standard, signals of the rhythmic or Vernier clock type are broadcast from the Post Office Wireless Station at Rugby each day at 10^h and 18^h. The zero signal coincides exactly with a beat of the standard clock, and those that follow are at intervals of 60/61 seconds. The comparison is made by noting the coincidence of a beat of the distant clock beating seconds, with a signal. If a tick of the clock coincides with the zero signal, it is clear that the clocks differ by an integral number of seconds. If, however, coincidence does not come at the zero signal, but at the *n*th signal, the difference of the clocks in seconds is that integral number with *n*/61 added.

Variable Rotation of the Earth

The accuracy of clocks and of time signals is essentially dependent on the uniform rotation of the earth, but it has been known for many years that the speed of the earth's rotation is diminishing. This was first disclosed by a comparison of records of ancient eclipses with the times of these events as computed from modern theory. This slow change (amounting to about one-thousandth of a second in a century) is believed to be due to tidal friction in narrow seas.

The greater accuracy of modern crystal clocks has shown that there are seasonal variations in the earth's rate of rotation, together with small but irregular fluctuations, some of which may occur quite suddenly. The seasonal variation, which causes the earth to be slow in spring and fast in autumn, may be due to the seasonal movements of masses of air and water over the earth's surface. The variation is very small, and may cause an error in time-keeping of 60 milliseconds in the course of the year.

SUMMER TIME IN GREAT BRITAIN

In 1916 an Act ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. The practice was stabilized (until the war) by the *Summer Time*

Act, 1922 to 1925, which enacted that "For the purposes of this Act, the period of summer time shall be taken to be the period beginning at two o'clock, Greenwich Mean Time, in the morning of the day next following the third Saturday in April, or, if that day is Easter Day, the day next following the second Saturday in April, and ending at two o'clock, Greenwich Mean Time, in the morning of the day next following the first Saturday in October."

During the war, the duration of Summer Time was extended, and in some years Double Summer Time was in force. The dates of the actual duration since its inception are:

1916 May 21—Oct. 1	1935 Apr. 14—Oct. 6
1917 Apr. 8—Sept. 17	1936 Apr. 19—Oct. 4
1918 Mar. 24—Sept. 30	1937 Apr. 18—Oct. 3
1919 Mar. 30—Sept. 29	1938 Apr. 10—Oct. 2
1920 Mar. 28—Oct. 25	1939 Apr. 16—Nov. 19
1921 Apr. 3—Oct. 3	1940 Feb. 25—Dec. 31
1922 Mar. 26—Oct. 8	1941 Jan. 1—Dec. 31
1923 Apr. 22—Sept. 16	1942 Jan. 1—Dec. 31
1924 Apr. 13—Sept. 21	1943 Jan. 1—Dec. 31
1925 Apr. 19—Oct. 4	1944 Jan. 1—Dec. 31
1926 Apr. 18—Oct. 3	1945 Jan. 1—Oct. 7
1927 Apr. 10—Oct. 2	1946 Apr. 14—Oct. 6
1928 Apr. 22—Oct. 7	1947 Mar. 16—Nov. 2
1929 Apr. 21—Oct. 6	1948 Mar. 14—Oct. 31
1930 Apr. 13—Oct. 5	1949 Apr. 3—Oct. 30
1931 Apr. 19—Oct. 4	1950 Apr. 16—Oct. 22
1932 Apr. 17—Oct. 2	1951 Apr. 15—Oct. 21
1933 Apr. 9—Oct. 8	1952 Apr. 20—Oct. 26
1934 Apr. 22—Oct. 7	1953 Apr. 19—Oct. 4

DOUBLE SUMMER TIME

1941 May 4—Aug. 10	1944 Apr. 2—Sept. 17
1942 Apr. 5—Aug. 9	1945 Apr. 2—July 15
1943 Apr. 4—Aug. 15	1947 Apr. 13—Aug. 10

SUMMER TIME ABROAD

Variations of the Standard time are used and the dates of adoption are decided annually. In some countries the variations are called Winter Time †.

British Commonwealth:—	Foreign Countries:—	Israel
Bermuda	Albania	Japan
British Honduras†	Brazil	Madiera
	Chile	French
Canada (except Yukon)	China	Morocco
	Czechoslovakia	Nicaragua
Channel Islands	Formosa	Poland
Gold Coast†	Honduras	Portugal
Hong Kong	Hungary	Tripolitania
Trinidad Is.	Iceland	Turkey
	Irish Republic	U.S.A.

Some of the astronomical information in this ALMANACK has been taken from the *Nautical Almanac*, and is published here by arrangement with, and with the permission of, the Controller of H.M. Stationery Office.

IN the year 1880 it was enacted by statute that the word "time", when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.* Other nations similarly used the time of their own capital, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used.

A classified list of places where zone systems have been adopted is given below. In the United States and Canada five standard times are used, these large territories being divided into zones approximately $7\frac{1}{2}^{\circ}$ on either side of five central meridians. For U.S.S.R., hourly zones from 3 hours to 13 hours fast have been adopted, these being of 15° width from $52^{\circ}30'$ to $172^{\circ}30'$.

Fast on Greenwich Time.

12 hrs. F...Fiji, Gilbert and Ellice Is., New Z., Marshall Is.

11½ " F...Nortolk Is., Nauru Is.

11 " F...New Caledonia, New Hebrides, Santa Cruz and Solomon Is., Truk,

10 " F...Sakhalin north of 50° N., Victoria, N.S.W. (except Broken Hill Area), Queensland, Tasmania, British New Guinea, Admiralty Is., Caroline Is. (east of 148° E.), Guam, Australian Capital Territory.

9½ " F...South Australia, Northern Territory of Australia, N.S.W. (Broken Hill Area), Dutch New Guinea.

9 " F...Manchuria, Japan, Korea, Kei, Aru, Schouten Is., Sakhalin south of 50° N., Kuril Is., Formosa, Pescadores Is., Caroline Is. (west of 148° E.), Marianas Is. (except Guam).

8½ " F...Molucca Is.

8 " F...Port Arthur, East China, Hong Kong, Philippine Is., Labuan, Macao, Timor, West Australia, Celebes, Sarawak, Indo China, N. Borneo.

7½ " F...Malay Peninsula, Singapore, Indonesian Borneo and Java.

7 " F...China (on the Yangtze Kiang from Chungking to Shasze), Hainan I., Pakhoi, S. Sumatra, Christmas I. (Indian Ocean), Thailand (Siam).

6½ " F...Burma, Andaman and Nicobar Is., Cocos Is., N. Sumatra.

6 " F...Pakistan (East).

5½ " F...India, Portuguese India, Ceylon, Laccadive Is.

5 " F...Chagos Archipelago.

4½ " F...Pakistan (West).

4 " F...Mauritius, Seychelles, Réunion, "C man, U.S.S.R., 40° E. to $52^{\circ}30'$ E.

3½ " F...Iran (Persia).

3 " F...U.S.S.R. west of 40° E., Iraq, Eritrea, Aden, Socotra I., Somaliland, Comoro Is., Madagascar, Uganda, Kenya, Tanganyika, Zanzibar.

2 " F...Turkey, Greece, Bulgaria, Roumania, Estonia, Latvia, Finland, Egypt, Israel, Jordan, Syria, Cyprus, Rhodesia, Union of South Africa, and Protectorates, Mozambique, Sudan, Belgian Congo (East), Cyrenaica, Lebanon.

E. European.

1 hrs. F...Sweden, Norway, Denmark, Netherlands, Belgium, Germany, France, Luxemburg, Spain, Gibraltar, Monaco, Balearic Is., Spanish Morocco, Poland, Lithuania, Austria, Hungary, Switzerland, Italy, Czechoslovakia, Yugoslavia, Albania, Tunisia, Nigeria, Malta, Sicily, French Equatorial Africa, Cameroons, Belgian Congo (West), Angola; Spitzbergen, Tripolitania.

Greenwich...Great Britain, Ireland, Faroë, Channel Is., Portugal, Algeria, French Morocco, Mauritania, Sierra Leone, Ivory Coast, Gold Coast, Togoland, Dahomey, Principe I., French Guinea, Senegal, St. Helena, Gambia, Canary Is.

Slow on Greenwich Time.

1 hr. S...Iceland, Madeira, Portuguese Guinea.

2 hrs. S...Azores, Cape Verde Is., Fernando Noronha I., Scoresby Sound.

3 " S...Greenland (excluding Scoresby Sound and Thule), Eastern Brazil, Uruguay, Argentina.

3½ " S...Newfoundland, Labrador, Dutch Guiana.

3½ " S...British Guiana.

4 " S...Canada east of 68° W., Greenland (Thule Area), Porto Rico, Lesser Antilles, Central Brazil, Falkland Is., Paraguay, Bermuda, Bolivia, French Guiana, Chile.

Atlantic formerly Maritime or Inter-Colonial.

4½ hrs. S...Venezuela, Curaçao I.

5 " S...Canada from 68° W. to 85° W. (north) or 90° W. (south), Eastern States of U.S.A., Jamaica, Bahama Is., Cuba, Haiti, Peru, Panama, W. Brazil, Colombia, Cayman Is., Ecuador.

6 hrs. S...Central parts of U.S.A., Canada from 85° W. (north) or 90° W. (south) to 102° W., Costa Rica, Salvador, Honduras, part of Mexico, Guatemala, Nicaragua.

7 hrs. S...Canada from 102° W. to 120° W., Mountain States of U.S.A., part of Mexico.

8 hrs. S...Canada west of 120° W., Alaska (south-east coast), Western States of U.S.A.

9 hrs. S...Alaska (east), Yukon.

10 " S...Alaska (central), Low Archipelago, Marquesas, Austral and Society Is., Hawaii.

11 " S...Aleutian Is., Alaska (west coast), Samoa, Fanning I., Christmas Is. (Pacific Ocean), Midway Is.

In the Tonga Islands the time 12h. 20m. fast and in Chatham Is. 12h. 15m. fast on Greenwich is used, as the Date line is to the East of them.

THE DATE OR CALENDAR LINE

The line where the change of date occurs is a modification of the 180th meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. It is indicated by joining up the following nine points:

Lat.	Long.	Lat.	Long.	Lat.	Long.
60° N.	180°	$15\frac{1}{2}^{\circ}$ N.	$172\frac{1}{2}^{\circ}$ W.	$52\frac{1}{2}^{\circ}$ N.	170° E.
$51\frac{1}{2}^{\circ}$ S.	180°	5° S.	180°	65° N.	166° W.
$45\frac{1}{2}^{\circ}$ S.	$172\frac{1}{2}^{\circ}$ W.	48° N.	180°	70° N.	180°

* Summer Time is the "legal" time during the period in which its use is ordained.

SUNRISE AND SUNSET TABLE

Dec.	Latitude and Declination of Opposite Signs						Latitude and Declination of Same Signs							
	50°	45°	40°	30°	20°	10°	0°	10°	20°	30°	40°	45°	50°

The local mean time of sunrise or sunset (as defined on page 140) may be found by determining the appropriate hour angle from the table above and subtracting it from or adding it to the time of "Sun Souths" given in the ephemeris for each month. The resulting local mean time may be converted into the standard time of the country by taking the difference between the longitude of the standard meridian of the country and that of the place, and adding it to the local mean time if the place is west of the standard meridian, and subtracting it if the place is east of the standard meridian.

Example.—Required the N.Z. Mean Time (12^h fast on G.M.T.) of sunset on May 24

at Auckland. The latitude is 36° 50' south (or minus) and the longitude 173° 39' east. Taking the declination as +20°·6, we find

This table gives the correction to be applied to an observed altitude of *Polaris* (first corrected for dip, refraction and instrumental error) to give the latitude. It is correct within 1' throughout the year for all latitudes up to 60°.

Example.—On July 4 at 23^h 17^m G.M.T. in longitude 2^h 34^m west, the altitude of *Polaris*

(corrected for dip, etc.) is found to be 41° 56'.

The local sidereal time is found by the method given on page 141 to be 15^h 33^m. Hence

Observed altitude 41° 56'
Correction from table.. +52

Latitude 42° 48'

8	1	19	20	3	17	45	3	39	8	1	19	2	52	14	00
9	1	29	21	3	27	51	4	44	9	1	28	3	12	20	42
						57	4	49				3	34	32	20
10	1	39	22	3	37	60	5	00	10	1	38	4	00	62	17
11	1	48	23	3	47				11	1	48	4	30	90	00
12	1	58	24	3	57				12	1	58				

The length of a sidereal day in mean time is 23^h 56^m 04^s.09. Hence 1^h M.T. = 1^h + 9^s.86 S.T. and 1^h S.T. = 1^h - 9^s.83 M.T.

To convert an interval of mean time to the corresponding interval of sidereal time, enter the acceleration table with the given mean time (taking the hours and the minutes and seconds separately) and add the acceleration obtained to the given mean time. To convert an interval of sidereal time to the corresponding interval of mean time, take out the retardation for the given sidereal time and subtract.

The columns for the minutes and seconds of the argument use in the form known as Critical Tables. To are these tables, find in the appropriate left-hand column the two entries between which the given number of minutes and seconds lies; the quantity in the right-hand column between these two entries is the

required acceleration or retardation. Thus the acceleration for 11^m 26^s (which lies between the entries 9^m 07^s and 15^m 13^s) is 2^s. If the given number of minutes and seconds is a tabular entry, the required acceleration or retardation is the entry in the right-hand column above the given tabular entry; e.g. the retardation for 45^m 46^s is 7^s.

Example.—Convert 14^h 27^m 35^s from S.T. to M.T.

h m s
Given S.T. 14 27 35
Retardation for 14^h 2 18
Retardation for 27^m 35^s.. 5

Corresponding M.T. 14 25 12

For further explanation, see pages 143-144.

The refraction table is also in the form of a critical table.

CELESTIAL PHENOMENA FOR OBSERVATION IN 1954

ECLIPSES

In the year 1954 there will be five eclipses, three of the Sun, and two of the Moon.

I. An annular eclipse of the Sun on January 5, visible only in the Antarctic. In New Zealand a small partial eclipse will be visible from about 2^h to 4^h G.M.T.

II. A total eclipse of the Moon on January 18-19. The eclipse begins at 50 minutes after midnight, and will be total from 2^h 17^m until 2^h 47^m; it will be visible from this country, and generally throughout Europe, Africa, the Atlantic, North and South America.

III. A total eclipse of the Sun on June 30, the path of totality crossing Lake Superior, the southern tip of Greenland, southern Norway and Sweden, and passing through Kiev to the southern Caspian Sea and ending in northern India. This is the most readily accessible eclipse for many years. The island of Unst in the Shetlands lies just within the southern limit of the eclipse track, but generally in this country a large partial eclipse will be seen, beginning at Greenwich at 12^h 16^m. At greatest phase (12^h 34^m G.M.T.) about three-fourths of the Sun will be obscured by the Moon. In southern Sweden the maximum duration of totality is about 2½ mins.

IV. A partial eclipse of the Moon on July 15-16, visible in this country and in Europe and Africa generally. The eclipse begins at 51 mins. before midnight, and at maximum phase, at 20 mins. after midnight, about two-fifths of the Moon will be covered by the earth's shadow.

V. An annular eclipse of the Sun on Dec. 25, visible in the extreme south of South Africa (Port Elizabeth), the southern Indian Ocean, and parts of the East Indies. In South Africa generally, and in Australia, a partial eclipse will be seen.

OCULTATIONS OF STARS

In 1954 there are no less than ten predictions of occultations of planets by the Moon, but unfortunately none of these is visible in this country. The occultation of Jupiter on Aug. 25 should be seen in Australia, while that of Mars on April 23 under less favourable conditions may be seen from parts of New Zealand.

The bright star *Antares* continues to be occulted during the year, and two of these phenomena may be seen in this country on Jan. 2 and Feb. 26. No other stars brighter than magnitude 3.2 are occulted during the year, but some of the stars in the Pleiades cluster again figure in the lists of occultations on the nights of Jan. 14 and Feb. 10-11.

The list on the opposite page includes all the occultations visible under favourable conditions in the British Isles. Disappearances of stars down to magnitude 6.5 are normally included, and reappearances to fifth magnitude only. No occultation is included unless the star is at least 10° above the horizon and the Sun sufficiently far below the horizon to permit the star to be seen with the naked eye or in a small telescope.

The column Phase shows whether a disappearance (D) or reappearance (R) is to be observed. Times and position angles (*P*), reckoned from the north point in the direction north, east, south, west, are given for Greenwich (Lat. 51° 29', Long. 0°) and Edinburgh (Lat. 55° 56', Long. 3° 11' west). The coefficients *a* and *b* are the variations in the G.M.T. for each degree of longitude (positive to the west) and latitude (positive to the north) respectively: they enable approximate times (to within about 1^m generally) to be found for any point in the British Isles. If the point of observation is $\Delta\lambda$ degrees west and $\Delta\phi$ degrees north, the approximate time is found by adding $a\Delta\lambda + b\Delta\phi$ to the given G.M.T.

As an illustration the reappearance of *Antares* on Jan. 2 at Liverpool will be found from both Greenwich and Edinburgh.

	Greenwich	Edinburgh
Longitude.....	0°0	+3°2
Long. of Liverpool.....	+3°0	+3°0
$\Delta\lambda$	+3°0	-0°2
Latitude.....	51°5	55°9
Lat. of Liverpool.....	53°4	53°4
$\Delta\phi$	+1°9	-2°5
	<i>b m</i>	<i>b m</i>
G.M.T.....	10 26.6	10 19.7
$a\Delta\lambda$	-4.8	+0.3
$b\Delta\phi$	-1.1	-1.0
G.M.T. at Liverpool.....	10 20.7	10 21.0

If the occultation is given for one station but not the other, the reason for the suppression is given by the following code.

No occn. = star not occulted.

Low = star's altitude less than 10°.

Sun = Sun not sufficiently below the horizon.

Graze = occultation is of very short duration.

It will be noticed that in some cases the coefficients *a* and *b* are not given: this is because the occultation is so short that prediction for other places by means of these coefficients would not be reliable.

The positions of heavenly bodies on the celestial sphere are defined by two co-ordinates, right ascension and declination, which are analogous to longitude and latitude on the surface of the Earth. If we imagine the plane of the terrestrial equator extended indefinitely, it will cut the celestial sphere in a great circle known as the celestial equator. Similarly the plane of the Earth's orbit, when extended, cuts in the great circle called the ecliptic. The two intersections of these circles are known as the First Point of Aries and the First Point of Libra. If from any star a perpendicular be drawn to the celestial equator, the length of this perpendicular is the Star's declination. The arc, measured eastwards along the equator from the First Point of Aries to the foot of this perpendicular, is the right ascension. An alternative definition of right ascension is that it is the angle at the celestial pole (where the Earth's axis, if prolonged, would meet the sphere) between the great circles to the First Point of Aries and to the star.

The plane of the Earth's equator has a slow movement, so that our reference system for right ascension and declination is not fixed. The consequent alteration in these quantities from year to year is called precession. In right ascension it is an increase of about 3^s a year for equatorial stars, and larger or smaller amounts for stars near the pole. In declination it varies between +20" and -20" according to the right ascension of the star.

A star or other body crosses the meridian when the sidereal time is equal to its right ascension. The altitude is then a maximum, and may be deduced by remembering that the altitude of the elevated pole is numerically equal to the latitude, while that of the equator at its intersection with the meridian is equal to the co-latitude, or complement of the latitude.

Thus in London (Lat. $51^{\circ} 30'$) the meridian altitude of *Sirius* is found thus:

Altitude of equator.....	38	30
Declination south.....	16	39

Difference..... 21 51

The altitude of *Capella* (Dec. $+45^{\circ} 57'$) at lower transit is:

Altitude of pole.....	51	30
Polar distance of Star...	44	03

Difference..... 7 27

The brightness of a heavenly body is denoted by its magnitude. Omitting the exceptionally bright stars *Sirius* and *Canopus*, the twenty brightest stars are of the first magnitude, while the faintest stars visible to the naked eye are of the sixth magnitude. The magnitude scale is a precise one, as a difference of five magnitudes represents a ratio of 100 to 1 in brightness. Typical second magnitude stars are *Polaris* and the stars in the Belt of Orion. The scale is most easily fixed in memory by comparing the stars with Norton's *Star Atlas* (see page 140). The stars *Sirius* and *Canopus* and the planets Venus and Jupiter are so bright that their magnitudes are expressed by negative numbers. A small telescope will show stars down to the ninth or tenth magnitude, while stars as faint as the twentieth magnitude may be photographed by long exposures with the largest telescopes.

* α Herculis, mag. 3.1 to 3.9.

δ Cephei, mag. 3.7 to 4.4, Spectrum F₅ to G₀.

Jupiter's satellites transit across the disc from east to west, and pass behind the disc from west to east. The shadows that they cast also transit across the disc. With the exception at times of Satellite IV, the satellites also pass through the shadow of the planet, i.e. they are eclipsed. Just before opposition the satellite disappears in the shadow to the west of the planet, and reappears from occultation on the east limb. Immediately after opposition the satellite is occulted at the west limb, and reappears from eclipse to the east of the planet.

At times approximately two to four months before and after opposition, both phases of eclipses of Satellite III may be seen. When Satellite IV is eclipsed, both phases may be seen.

The list of phenomena given includes most of the eclipses and some of the shadow transits visible in the British Isles under favourable conditions.

Ec. = Eclipse
Sh. = Shadow transit
Oc. = Occultation
Tr. = Transit of the Satellite.
c. = commences
f. = finishes

The Stellar System

The celestial bodies, consisting of the Sun, Moon, planets and fixed stars, have the appearance of being attached to the inner surface of a sphere. The apparent daily rotation of this sphere, which carries the celestial bodies round us from east to west across the sky, is due to the rotation of the Earth with ourselves upon it from west to east. The fixed stars that constitute the great majority of the celestial bodies remain, as far as the naked eye can judge, absolutely fixed in their positions relative to one another. The Sun, Moon and planets, on the other hand, can easily be watched as the weeks go by, moving against the background of the fixed stars. This difference is simply a distance effect, for the Sun, Moon and planets, together with our own Earth, are all members of the same system, the so-called solar system, the dimensions of which are minute in comparison with the distances of the fixed stars. In fact, the nearest star is more than 6000 times as far away as the most distant planet, Pluto, and about 250,000 times as far away as the Sun.

Most of the stars are travelling through space at several miles a second; yet they are so remote that to the naked eye their present configurations are practically the same as they were 5000 years ago. The Sun is an ordinary star with a real brightness somewhat below the average; yet it shines 10,000 million times more brightly than *Sirius*, the brightest star, a million million times more brightly than the faintest naked-eye stars, and a million million million times more brightly than the faintest stars within reach of our large telescopes. Similarly, though the planets Venus, Mars, and Jupiter are the brightest objects in the night sky, they are really such small bodies that from even the nearest star they would be quite invisible in our largest telescopes. It is convenient to express astronomical distances in terms of the time that light takes to accomplish the journey. Light travels at the rate of 186,000 miles a second; it takes $1\frac{1}{2}$ seconds to reach us from the Moon, our nearest neighbour in space; just over 8 minutes to reach us from the Sun; about $5\frac{1}{2}$ hours from the planet Pluto; four years from the nearest star; and about 500 million years from the most distant bodies yet photographed. We therefore talk about a star as being so many "light years" distant.

The total number of stars in the sky visible to the naked eye is about 4500, not all of which can be seen at any one time, or from any one latitude. About 1000 million stars can be photographed with the largest telescopes and it is estimated that the total number of stars in our stellar system is about 50,000 million.

THE STRUCTURE OF THE UNIVERSE

The stars are classed according to their apparent brightness in magnitudes. A few of the brightest stars are brighter than the first magnitude. The faintest naked-eye stars are about the sixth magnitude, which is exactly 100 times fainter than the first. With the largest telescopes we can photograph stars of about the 21st magnitude, which is

100 million times fainter than the first. All stars of the ninth magnitude or brighter have been catalogued and their magnitudes accurately measured. For fainter stars the number brighter than any given magnitude has been determined from measurements and counts in sample areas. If the universe consisted of stars distributed uniformly through an endless space, the number of stars brighter than any particular magnitude should be four times as great as the number brighter than the next lower (brighter) magnitude. It is actually found, however, that this ratio diminishes continuously as the stars become fainter, and falls to about 2 in the neighbourhood of the 16th magnitude. This must mean either that the universe of stars is of limited extent and that there are few or no stars beyond a certain distance, or that there is some sort of obscuring mist scattered through space which prevents our seeing the more distant stars.

Although the brighter stars are scattered more or less at random, the fainter naked-eye stars obviously tend to congregate in the vicinity of the Milky Way. The rate at which the stars appear to thin out is most rapid in directions at right angles to the Milky Way. This must mean that the stellar system extends to much greater distances in the direction of the Milky Way than at right angles to it. It is now known that the stellar system is shaped rather like a watch, its diameter being much greater than its thickness, while its central parts are thicker than its outer parts. The diameter is about 100,000 light years, and the thickness about 5000 light years in the outer parts, increasing to about 15,000 towards the centre. Though we in the solar system are situated well within the stellar system, we are placed somewhat eccentrically, being about 35,000 light years from its centre and 15,000 from its edge. The explanation of the appearance of the Milky Way is now clear: when looking in its direction, we are looking through a very deep stratum of stars, whereas in other directions the stratum is comparatively shallow. When we examine the Milky Way with the telescope, or photographically, we find its pale light broken up into countless stars, which in places appear so closely packed as to form an almost continuous background of light.

The flattened stellar system, also known as the galaxy or galactic system, contains the vast majority of observable stars. Besides individual stars it contains aggregations: the great star clouds, into which even with the naked eye the Milky Way is seen to be broken up; and the so-called open clusters, many of which can be seen with a good field-glass. Another class of object found in the galaxy is the diffuse nebula; these are irregularly-shaped, and sometimes very extensive, patches of hazy light composed of glowing gas. In close association with these are the dark diffuse nebulae, which appear like dark lanes or holes in the Milky Way, but in reality are vast clouds of very fine dust, blotting out the stars that lie beyond them. Though the bright nebulae, of which that in Orion is the most beautiful, require to be seen with a telescope,

the more extensive of the dark nebulae are readily seen with the naked eye as rifts or discontinuities in the Milky Way. The objects already described tend to congregate towards the Milky Way, but there is another class of object, which appears to avoid the immediate neighbourhood of the Milky Way. These are the globular clusters scattered in a more or less spherical distribution. The complete stellar system is thus conveniently likened to a currant bun, which after being split in two and buttered, has been put together again. The buttered layer represents the galaxy proper, containing the majority of the stars, the open clusters and the diffuse nebulae; while the currants scattered indiscriminately throughout the bun represent the globular clusters and the minority of individual stars. There is a general obscuring haze, much more widespread and rarefied than that composing the dark nebulae, and closely confined to the galactic plane. This has the effect of hiding very distant objects lying in, or close to, the direction of the Milky Way, while leaving practically undimmed equally distant objects lying well away from the Milky Way. This is why the globular clusters appear to avoid the vicinity of the Milky Way, for those that should appear closest are blotted out by the absorbing medium.

The brighter stars form a cluster to which our own Sun belongs. This local cluster is somewhat flattened in shape, with a diameter of about 2000 light years and a thickness of about 700. It is possible that it is essentially similar to the star clouds and clusters seen in the Milky Way.

We come finally to the extra-galactic nebulae—far outside the galaxy. Like the globular clusters, and for the same reason, they appear to avoid the galactic plane. Like the diffuse nebulae they have a hazy appearance in the telescope, but unlike them many are seen on photographs to have a curious spiral structure. Analysis of their light reveals the spectrum of starlight and not that of a glowing gas as in the case of the diffuse nebulae. The theory that they are stellar systems too remote for individual stars to be distinguished is borne out by the detection, in a few of the nearest, of the brightest of their component stars. Not all have a spiral form; some have an elliptical outline and others are quite irregular in shape. Recent observations substantiate the vague suggestion made about 150 years ago by William Herschel that they are "island universes"—systems essentially similar to, and independent of, our own stellar system. The two nearest are the Magellanic clouds, easily visible to the naked eye in the southern hemisphere, at distances of a little under 100,000 light years. The Andromeda Nebula, the nearest in the northern hemisphere, and faintly visible to the naked eye, is about 900,000 light years away. The faintest and most distant that can be photographed are about 500 million light years away. It is estimated that within that distance there are no fewer than 100 million such systems.

STELLAR SPECTRA

The bright stars and many of the fainter have been examined spectroscopically, and it is found

that their spectra can be arranged in a sequence of types, denoted by the letters, O, B, A, F, G, K, M, N, which merge imperceptibly one into the next. The sequence is closely correlated with colour and with surface temperatures. O and B stars, exemplified by the bright white Orion stars, are the hottest and have spectra characteristic of helium and hydrogen. A and F stars, like *Vega* and *Sirius*, are also white stars, characterized by very strong hydrogen lines. Stars from F to K, which include our Sun and *Capella*, show increasing numbers of metallic lines and are yellow in colour. Finally the M and N stars, like *Betelgeuse* and *Aniars*, are the coolest, orange or red in colour, and give complex molecular spectra. The redder stars fall into two groups—large, rarefied stars of great luminosity called "giants", and small dense stars of small luminosity called "dwarfs". Certain details in the spectra enable us not only to distinguish between the two groups, but also to give a reliable estimate of a star's "absolute magnitude" or the magnitude it would have if placed at a certain standard distance; this and its apparent magnitude immediately give us its distance.

THE SIZE OF THE STARS

Although no telescope can reveal the true disc of a star, there is an ingenious instrument, the interferometer, which enables us to measure the apparent diameters of a few stars. If we also know the distance of the star, its diameter immediately follows. The two largest stars measured in this way are a *Herculis* and *Betelgeuse*, with diameters 400 and 300 times that of the Sun respectively.

DISTANCES OF THE STARS

The first determination of a star's distance was made in 1836. The direct or trigonometric method consists in measuring the minute difference of direction of the star as seen from opposite sides of the Earth's orbit—which nowadays is always done photographically. The distances of a few thousand stars have been found in this way, but the method has very little accuracy for distances greater than about 100 light years. The distances of 4000 stars, found by the spectroscopic method already noted, have been published by Mount Wilson Observatory. This method will carry one, for the brightest stars, to a distance of several thousand light years. The statistical distance of a group of stars can be determined from their mean parallax motion (see *Stellar Motions*). The distances of double stars in orbital motion round one another can be found on the assumption that together they are twice as massive as the Sun.

The absolute magnitude of a "Cepheid" variable star, whose period of light fluctuations is extremely regular, is closely correlated with the period of variation. Hence a knowledge of the absolute magnitude and a measurement of the apparent magnitude give us at once the distance. Thus many extremely luminous Cepheids have given us the distances of the globular clusters or spiral nebulae in which they are situated.

STELLAR MOTIONS

The so-called fixed stars are very slowly changing their positions relative to one another. The apparent movement of each star, known as its proper motion, is due partly to the star's peculiar motion, namely its actual movement through space, and partly to the movement of our own Sun through space, which causes an apparent motion in the opposite direction, called the star's parallax motion. The parallax motion can be used for determining the average distance of a group. The velocities

of stars directly towards or away from the Earth, i.e. their so-called radial velocities, can be found by measuring their spectral lines, the lines being shifted towards the blue end of the spectrum in an approaching star, and vice versa. From proper motions and radial velocities we find that the solar system is travelling at about 12 miles a second, approximately in the direction of the bright star *Vega*. The Sun and the nearer stars with it, forming the local cluster, tend to move together but the stellar system as a whole is rotating about the centre of the galaxy.

TIMES OF MINIMA OF ALGOL (β PERSEI) in 1954

Jan.	Feb.	Mar.	April	July	Aug.	Sept.	Oct.	Nov.	Dec.
d h	d h	d h	d h	d h	d h	d h	d h	d h	d h

29 00		27 08	27 21	28 15	29 04	26 20	28 09	28 22	27 14
31 28		30 05	30 18	31 12		29 17	31 06		30 11

These are approximate times of the middle of the period of diminished light.

NEW STARS OR NOVÆ

A nova is a star which in a few days brightens up many thousands of times, generally by 10 to 15 magnitudes, and then begins to fade, at first rapidly and then more slowly, returning to its original brightness about a year later. Sometimes at greatest brightness novæ are easily visible to the naked eye, and occasionally, as with Nova Aquilæ in 1918, they may temporarily outshine all other stars in the sky. With the routine use of photography, the discovery of faint novæ has become much more frequent, usually several being discovered each year. The cause of the brightening is a sudden and very rapid expansion of the star; though the reason for the expansion is not known, it is thought that it may be a normal event in the evolutionary development of every star. The absolute magnitude of a nova at maximum brightness appears to be fairly constant; the appearance of novæ in some of the nearer spiral nebulae have given a valuable check on the distances of these extragalactic systems. In a super-nova, which represents a celestial explosion on a still vaster scale, the absolute magnitude at maximum brightness is some hundred million times that of the Sun. Hence super-novæ in the most distant systems are becoming of the greatest value in gauging the distances of the remoter parts of the universe.

DOUBLE AND BINARY STARS

A considerable number of stars that appear as single to the naked eye are found to be double in

the telescope; in many of these the two bodies are in orbital motion round one another—two suns, in fact, revolving round their common centre of gravity. The periods of these so-called binary stars range from about six years up to several hundred years. Some binaries are so close together that they appear single even in the largest telescope, their binary character being revealed only by the spectroscope. When their orbits are nearly edge-wise to the Earth, their motions must be periodically directed towards and away from the Earth, so that their spectral lines, previously superimposed, separate and appear double. Spectroscopic binaries are much closer than visual binaries and have periods ranging from less than a day to a few years. If the orbits of a spectroscopic binary are almost exactly edge-wise to the Earth, the two components will periodically eclipse one another, so that the combined light of the two stars will fluctuate. The best known of the so-called eclipsing binaries is *Algol*, or β Persei, a star normally of the second magnitude. At perfectly regular intervals of slightly less than 2^d 21^h it fades to about one-third of its normal brightness, taking 4½ hours to reach its minimum, and, after a brief interval, another 4½ hours to regain its full light. The times at which the minima of this star can be conveniently observed are given in the accompanying table. Studies of the three different types of binary stars have given us accurate information in certain cases of their masses, densities and sizes.

NEBULÆ AND CLUSTERS

Object	Constellation	R.A.	Dec.	Description
		h m	°	
47 Tucanæ	Tucana	0 22	-72.4	and finest globular cluster, 42' diam., lucid
Messier 31	Andromeda	0 40	+41.0	Great Spiral Nebula, 2° × ½°, lucid
Nub. Minor	Tucana	0 50	-73.9	Lesser Magellanic Cloud, 10 sq. deg., lucid
M 33	Triangulum	1 31	+30.4	Spiral nebula, 1° × ½°
H VI 33, 34	Perseus	2 16	+56.9	Double cluster, each 36' diam., lucid
Pleiades	Taurus	3 45	+23.9	Open cluster, 1½° × 1°, lucid
Hyades	Taurus	4 26	+15.8	Open cluster, 3° across, lucid
Nub. Major	Dor.-Mensa	5 25	-69.3	Greater Magellanic Cloud, lucid
M1	Taurus	5 32	+22.0	"Crab" nebula, 3' × 1'
M42	Orion	5 33	-5.4	"Great" nebula, lucid, round θ Orionis
30 Dor.	Dorado	5 39	-69.1	"Looped" nebula and cluster
M37	Auriga	5 47	+32.5	Nearly globular cluster, 20' diam.
M35	Gemini	6 06	+24.4	Loose cluster, 40' diam., just lucid
H IV 45	Gemini	7 26	+21.0	Planetary nebula. Bright nucleus
M 44	Cancer	8 37	+20.2	"Praesepe" or "Beehive" cluster, 1° sq.
Dun. 297	Carina	10 01	-59.9	Loose cluster, 30' diam., lucid
θ Carinæ	Carina	10 42	-64.2	Open cluster, 70' diam., lucid
Dun. 309	Carina	10 43	-59.4	Great nebula, 80' diam., round η Argus
Dun. 323	Carina	11 04	-58.4	Loose cluster, 60' oval, with 6th mag. star
κ Crucis	Crux	12 51	-60.1	Loose cluster, 10' diam., just lucid
ω Centauri	Centaurus	13 24	-47.1	Finest globular cluster, 45' diam., lucid
M51	Can. Ven.	13 28	+47.4	Bright double spiral nebula
M3	Can. Ven.	13 40	+28.6	Globular cluster, 18' diam., lucid
M5	Serpens	15 16	+2.3	Globular cluster, 15' diam., lucid
M13	Hercules	16 40	+36.6	3rd finest globular cluster, 15' diam., lucid
Dun. 520	Scorpio	16 52	-39.4	Loose cluster, 10' diam., lucid
M92	Hercules	17 16	+43.3	Globular cluster, 8' diam., just lucid
Dun. 366	Ara	17 37	-53.6	Globular cluster, 18' diam., lucid
M6	Scorpio	17 37	-32.2	Loose cluster, 25' diam., lucid
M7	Scorpio	17 47	-34.8	Bright open cluster
M23	Ophiuchus	17 54	-19.0	Loose cluster, 25' diam.
M20	Sagittarius	17 59	-23.0	"Trifid" nebula, 20' diam.
H IV 37	Draco	17 59	+66.0	Helical planetary nebula
M8	Sagittarius	18 01	-24.4	Nebula like Trifid, 25' diam., lucid
M22	Sagittarius	18 30	-24.0	Globular cluster, 16' diam.
M11	Scutum	18 48	-6.3	Compact cluster, 10' diam., just lucid
M57	Lyra	18 52	+33.0	"Ring" nebula, 1' diam.
Dun. 295	Pavo	19 06	-60.1	Globular cluster, 18' diam., lucid
M27	Vulpecula	19 57	+22.6	"Dumb Bell" nebula, planetary, 5' diam.
M15	Pegasus	21 28	+12.0	Globular cluster, 6' diam.
M2	Aquarius	21 31	-1.1	Globular cluster, 8' diam.
H IV 18	Andromeda	23 23	+42.2	Small bright planetary nebula

M=Messier. H=Sir W. Herschel. Dun.=Dunlop (Paramatta 1828). Lucid=visible to unaided eye.

VARIABLE STARS

We have already referred to the Cepheid variables, which are generally believed to be pulsating stars, alternately expanding and contracting. Another type is the long-period variable, in which the periods are generally about one year and are not perfectly regular. A good example is Mira Ceti with a period of about 330 days, fluctuating between naked eye brightness and tenth magnitude. Finally there are variable stars in which the periods and fluctuations are entirely irregular.

STAR CLUSTERS AND NEBULÆ

We have already referred to the various types of star clusters and nebulae; the open clusters of

irregular shape, which abound in the Milky Way; and the globular clusters which lie on either side of the Milky Way; the diffuse nebulae, both bright and dark, which are composed partly of glowing gas and partly of fine dust, and which also congregate towards the Milky Way; and finally the scattered extra-galactic nebulae, often of spiral shape, lying far outside our own stellar system. There is one other type, the planetary nebulae which, like the diffuse nebulae, are gaseous and situated within the stellar system. They have a roughly spherical form and appear as discs or rings of pale light. Most of them have an extremely dense and intensely hot star near their centre.

The Solar System

The Sun is one of the millions of stars that make up the Universe. The energy that it radiates in the form of light and heat is believed to be maintained by nuclear reactions among the atoms in its interior. It is surrounded by an immense number of comparatively cold planets and comets, together with smaller particles that give rise to meteors and the zodiacal light.

The planets are solid bodies revolving about the Sun in elliptical orbits with the Sun at one focus, and at distances related to the periodic times in accordance with Kepler's third law: the squares of the periodic times vary as the cubes of the semi-major axes. All revolve in the same direction, the orbits being only slightly inclined to the plane of the ecliptic in which the Earth moves round the Sun. As seen from the Earth, therefore, the planets are always near the ecliptic, moving in general from west to east round the sky. Once in every such revolution the planet appears to become stationary and then retrograde, forming a looped path which is a consequence of the Earth's own orbital movement.

The nine major planets, of which the earth is one, are of special interest, the five that are visible to the naked eye having been known from the earliest times. Six have satellites or moons revolving round them. These, like the planets themselves, are not self-luminous, but shine by the reflected light of the Sun. Notes on these bodies are given in the following pages. The thousands of minor planets that are also known, although of less interest to the observer, afford many problems to the mathematical astronomer. Comets are also members of the solar system; their orbits are inclined at all angles to the ecliptic, and are generally highly eccentric, reaching out to immense distances in space. The light of a comet is not due entirely to reflected sunlight, but partly to fluorescence caused by selective absorption of solar radiation. The return of a comet of short period may be predicted with some accuracy, but most comets appear quite unexpectedly. Meteoric dust appears to have a common origin with the comets, since some meteor showers have been shown to follow the orbits of certain comets.

THE SUN

The gaseous surface of the Sun, seen in a telescope under the best observing conditions, presents a mottled appearance called "granulation." On this so-called "photosphere" black spots appear sporadically within limited zones. Associated with the genesis of sunspots are bright streaks called "faculae" (best seen when the spots are near the edge of the Sun's disc) which outlive the dark spots themselves. Sunspots are thought to be columnar vortices, which have a deep-seated origin far below the photosphere. The strong magnetic field in every sunspot implies it is a vast tornado in which electrified particles are rapidly whirled. Compared with its immediate surroundings a sunspot is a cool and dark patch of solar gases—in reality its temperature is over 4000° absolute and it is as

bright as the brightest terrestrial source of light. Spots vary in size according to their stage of development. The actual area of the smallest is about 1 million square miles; that of the largest group of spots is over 4000 million square miles. The biggest spot ever recorded (1947 April) covered 7000 million square miles at maximum. One of area 500 million square miles (less than 1/2000 part of the Sun's hemisphere) is just visible without a telescope as a speck. (A deeply tinted glass should *always* be used.) The variation in number, though apparently haphazard, conforms to a well-defined cycle completed in about 11 years, during which sunspots progressively change their place of origin. The spots of a new cycle are centred in solar latitude 25°, at maximum they are most thickly clustered about latitude 13°, while near minimum they are chiefly in equatorial zones. The new cycle spots then begin to appear in the higher latitudes, giving a temporary overlap, and the whole cycle is repeated. The dates of sunspot maxima and minima are given below. It will be seen that there are large variations from the average length of the solar cycle, namely 11.2 years.

Maxima		Minima	
1805.2	1883.9	1810.6	1889.5
1816.4	1894.1	1823.3	1901.7
1829.9	1907.0	1833.9	1913.6
1837.2	1917.6	1843.5	1923.6
1848.1	1928.4	1856.0	1933.8
1860.1	1937.4	1867.2	1944.2
1870.6	1947.5	1878.9	1954

The sunspot maximum of 1937-38 was the highest since 1870, but is exceeded by that of 1947-48.

Within the 11-year cycle, the prominences (see below) show a fluctuation in their activity, and the form of the solar corona changes in a marked way. There are also some terrestrial phenomena that vary in like phase and point to a relation between the Sun and the Earth.

The Sun rotates on its axis in about 27 days with respect to the Earth; this is equivalent to a true solar rotation of about 25 days. It does not rotate as a solid body; different latitudes have different rotation periods. Values derived from sunspot observations are: at latitude 0°, 26.9 days; at 15°, 27.3 days; at 30°, 28.3 days; and at 45°, 30 days.

The Sun's photosphere visible in ordinary light is surrounded by an envelope of glowing gases containing hydrogen in great abundance. This higher atmosphere of great tenuity (called the "chromosphere") can be explored by spectroscopic instruments enabling the solar disc to be photographed or examined in the light emitted from one element alone, e.g. hydrogen or ionized calcium. A total solar eclipse also affords the opportunity of seeing the "corona"—the Sun's outermost envelope—as well as the chromosphere. In the clear air of high-altitude stations, the inner corona can now be observed without an eclipse by means of the Lyot coronagraph.

From the chromosphere, which is in a general state of turbulence, rise the flame-like "prominences,"

ELEMENTS OF THE SOLAR SYSTEM

Orb	Mean Distance from Sun		Sidereal Period	Synodic Period	Inclination of Orbit to Ecliptic	Diameter	Mass compared with Earth	Period of Rotation on Axis
	Radius of Earth's Orbit	Millions of Miles

some more or less stable for days or even weeks, and others highly eruptive and lasting only for hours or even minutes. Bright chromospheric eruptions (solar flares), characterized by brilliant hydrogen and calcium clouds, appearing suddenly over sunspots and dying out usually within an hour, show a close association with sudden fade-outs on short-wave long distance radio communication, implying that the solar agency from the solar flare travels with the speed of light. Radio research has revealed that an intense solar flare is also normally accompanied by a burst of solar radiation observable on radio wavelengths around 5 metres. The greatest of these brilliant flares appear also to be the precursors of magnetic storms occurring about one day later.

The corona in its entirety can be seen only during a total eclipse of the Sun, but the inner corona is now being successfully recorded without an eclipse. Although the general shape of the corona undergoes a cyclical change within the 11-year cycle, individual prominences are sometimes associated with specific coronal structures which may end in long streamers extending for a few million miles into space. The light of the corona—only one millionth that of the Sun's surface—is largely due to radiation from the iron atom in highly ionized states, implying a temperature of one million degrees within the inner corona.

When the Moon passes between the Sun and the Earth the Sun is eclipsed. Solar eclipses are total when seen from places on which the shadow of the Moon falls, and partial in localities that are outside, but not far from, this path of totality. Taking the whole Earth into account, there are more solar eclipses than lunar in the proportion of four to three; for any given station the ratio is reversed.

MERCURY

Mercury is the smallest planet and the nearest to the Sun. Because it moves in an orbit between the Sun and the Earth, it is never far west or east of the Sun. If east, it appears as an evening star; if west,

as a morning star. The extremes of these apparent excursions are known as Greatest Elongations; their times and extent, measured by the angular distance from the Sun, are given on the first page of each month under the heading PHENOMENA. The great ellipticity of the orbit of Mercury causes the amount of these elongations to vary from 18° to 28°. The planet is best placed for naked eye observation some days before eastern elongation on spring evenings, or after western elongation on autumn mornings, though in England at these times its actual distance from the Sun is near its minimum. In the southern hemisphere the conditions are, of course, reversed.

In a telescope, Mercury shows phases to the Earth like the Moon, resembling her at first quarter when at eastern elongation, and at last quarter when at western elongation. The planet is exceedingly difficult to observe telescopically and is best scrutinized with large apertures in full daylight. A recent map of the surface, made by Antoniadi, confirms in its essential features one made last century by Schiaparelli; these observers agree that Mercury always turns the same face to the Sun. The question of whether Mercury has an atmosphere cannot be regarded as settled. The veiling of some of the surface features, recorded by Antoniadi, seems to indicate obscuration by some form of dust-clouds or haze; but this explanation is at variance with theory, which predicts that a body as small as Mercury must, like the Moon, have long since lost any atmosphere it ever possessed.

VENUS

Venus, next from the Sun, has a diameter only two or three hundred miles less than that of the Earth. Her apparent movement with regard to the Sun is similar to that of Mercury, but, owing to the greater size of her orbit, her elongations extend as far as 47°. Venus is the brightest planet and is several times brighter than any star; she can often be seen in full daylight with the naked eye.

Apart from the beauty of her phases, Venus is a

disappointing object in the telescope, her extensive atmosphere being so highly reflective, probably owing to cloud, that her true surface can never be observed. Vague dusky shadings may be seen or imagined, but conspicuous markings are both rare and evanescent. The rotation period of Venus is still unknown. Spectroscopic evidence sets a lower limit of about 20 days, but all that can be said about an upper limit is that it is unlikely to be as much as 225 days, the period of revolution around the Sun, as an appreciable amount of heat has been found to be radiated by the dark side of the planet. The spectrum of the atmosphere above the reflecting layer reveals a considerable amount of carbon dioxide, but no oxygen; such might also be the conditions on the Earth, were it not for the constant absorption of carbon dioxide by vegetation and its replacement by oxygen. A remarkable feature of the upper atmosphere is the absence of all trace of water vapour.

MARS

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury. Oppositions occur at intervals of about 2 years 2 months, but owing to the eccentricity of the orbit the opposition distance varies between 35 and 63 million miles. The most favourable approaches unfortunately take place when the planet is low in the sky for northern observers; but when, as in 1941, one occurs in the early autumn, the distance may be less than 40 million miles and the planet just north of the equator. It is only within two or three months of opposition that Mars is near enough for his surface to be successfully studied with a telescope; even at these times only the coarser details are likely to be recognized with instruments of less than 6 inches' aperture.

Except for Mercury, Mars is the only planet whose true surface we are able to see. This

exhibits many well-defined markings, most of which are permanent, and from these the rotation period has been well determined; it is about 41½ minutes longer than that of the Earth. The axis of rotation is inclined at about 24° to the plane of the orbit. There are white spots at the poles which are deposited during the winter of each hemisphere and melt or evaporate during the summer. It is most probable that these consist of thick deposits of hoar frost, for that at the south pole has been known to disappear completely. Other substances, such as solid carbon dioxide, have been suggested, but frost or snow seems more probable. The major portion of the surface is of a featureless orange hue, which gives rise to the ruddy appearance of Mars. But there abound large areas, often with sharp boundaries, of a blue-grey colour. The latter were once thought to be seas; but it is now known that there are no large sheets of open water, and some regard areas of vegetation as their most likely interpretation, especially as they undergo changes of tint. It has been claimed that these changes follow the Martian seasons; but as 15 or 17 years must elapse between the times when we can study Mars under similar conditions, it cannot yet be confirmed that there are any changes of a truly seasonal character apart from the waxing and waning of the polar caps.

The question of the so-called Martian "canals" is very controversial. Most skilled observers would probably deny the very existence of these excessively thin linear markings, attributing them to optical or physiological effects. To speculate on their being the work of intelligent beings is therefore, to say the least, premature.

Mars has an atmosphere believed to be considerably less dense than our own. The spectroscope has been unable to establish that it contains either oxygen or water vapour, which can therefore be present only in minute proportions. Recently,

however, about the same amount of carbon dioxide has been detected as is found in our own atmosphere.

Mars has two faint satellites, Phobos and Deimos, which were discovered by Asaph Hall in 1877.

THE MINOR PLANETS

Moving in orbits, which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. It is estimated that at least 50,000 come within reach of present instruments. Scores of them are now found every year by photographing the sky. Their orbits are calculated as observations accrue, and when the results are reliable enough the new planets are given permanent numbers, and usually also names, by a central authority—now at the Cincinnati Observatory, U.S.A. At present there are nearly 1600 on the permanent list, and several dozen are likely to be added each year; and always there are many still under investigation. All are faint—none have ever been seen by an unaided eye except, just possibly, Vesta.

These celestial bodies are probably little more than masses of rock flying round the Sun. The first four, found early in the 19th century, are also the largest: Ceres, 421 miles in diameter, Pallas 280, Juno 150 and Vesta 241 (miles).

The periodic times of the revolutions about the Sun vary considerably around an average of 4½ years, but interesting groups and gaps occur among the values for these times owing to disturbances of the orbits caused by the attraction on these bodies of the massive planet Jupiter. Although some of the orbits are nearly circular, others are very elongated ovals (ellipses); and though the inclinations of their planes to the ecliptic are mostly less than 20°, several exceed 30°, including Pallas 35°. The highest known, 43°, is that of Hidalgo. This planet has also the longest period, 14 years, and travels out as far as Saturn's orbit. On the other hand Icarus, discovered in 1949, comes within the orbit of Mercury, and three others Apollo, Adonis and Hermes, within that of Venus. Another, Eros, is of importance because in some circumstances it can be within 13 or 14 million miles of the Earth. This happened in 1931, when carefully planned photographic recording of the planet and the surrounding stars, enabled measures of its distance to be made, and hence a new value of the distance of the Sun from the Earth (the solar parallax) to be deduced. Much closer, however, was Hermes, when discovered in 1937, flashing past the Earth only about 400,000 miles away—less than twice the distance of the Moon.

JUPITER

Jupiter, the largest planet, has a volume over 1300 times that of the Earth, but a density only one-quarter of ours. Its oblate shape is so marked, owing to its great size and rapid rotation, as to be obvious in quite small telescopes.

Jupiter has four principal satellites—the first celestial objects discovered by the telescope, by Galileo. A fifth, very much smaller and fainter, and nearer to Jupiter, was discovered visually by

Barnard in 1892. Since then seven others have been found photographically, but all are minute objects. The two inner major satellites are about the size of our Moon, while the two outer are about as large as Mercury.

The characteristic surface features of Jupiter are bright zones separated by dusky belts, running practically parallel to the planet's equator. With telescopes of moderate size some of these may be resolved into finer detail, consisting of spots, wisps, streaks, etc., but the general banded appearance still remains. When the period of rotation is determined by timing objects such as these as they cross the planet's central meridian, it is found that spots within about 10° of the equator indicate a period of approximately 9h 50m, while most of those in higher latitudes give periods between 9h 55m and 9h 56m, the transition from the shorter to the longer being usually quite abrupt. It has therefore been found convenient to adopt two different systems of longitude reckoning, System I being applicable to the equatorial regions and System II to most of the rest of the surface. When the rotation periods are examined in greater detail, it is found that the surface may be divided into many zones, each having a particular period characteristic of its latitude, but that the distribution in latitude of the various periods is quite haphazard. This differs from the Sun, whose rotation is also fastest at the equator, for whereas a definite formula connects the periods of solar spots with their latitude, no such law can be found for Jupiter. Actually the fastest moving spots are confined to a narrow strip in latitude about +25°; the last outbreak of such spots occurred in 1939. It is evident that we do not see solid surface, but are viewing a vast expanse of clouds and vapours, in which the recognizable features have rapid drifts in longitude; motions in latitude are small and rare.

Few Jovian markings have any degree of permanence, having generally lost their individuality after a few months. Two objects, however, form notable exceptions. The well-known "Bay" or "Hollow" in the South Equatorial Belt, which is so closely associated with the Great Red Spot, made famous in 1878–80 by its darkness and colour, is known to have existed from 1831 and the Red Spot itself may be identical with a similar object first depicted in the 17th century and followed for many years. The physical nature of the Red Spot is a mystery; its long duration suggests some connection with the solid surface, but the non-uniformity of its period of rotation seems to rule out this explanation. The other feature displaying considerable permanence is known as the South Tropical Disturbance, which has the same latitude as the Red Spot. Its rotation period is somewhat shorter than that of the latter; since its first detection in 1901 it has overtaken and passed the Red Spot eight times. For a few years before 1940, this disturbance had become faint and difficult to see, but its two ends still sometimes exhibited their characteristic appearance; since then it is doubtful whether either end has been identified with certainty.

The spectroscope shows that Jupiter's atmosphere

contains ammonia and considerable quantities of methane (marsh gas). The main constituents are unknown, but it is probable that hydrogen and helium abound and that the light clouds of the surface are due to minute droplets or crystals of ammonia, the surface temperature having been found by measurement to be of the order -120°C ., which is not far from the calculated value. It has been suggested that this atmosphere is very deep; but if so, the pressure at depths below 50 miles or so must be such as to give it the properties of a liquid rather than a gas. A recent theory is that it may be dense enough to support in flotation a light solid body at some depth below the surface, and that what we see as the Red Spot may be a manifestation in the atmosphere above it of thermal changes in such a solid.

SATURN

This planet is unique because of its encircling ring system, which makes it a very beautiful object in even a small telescope. There are two bright rings and an inner dusky one, which is transparent enough for the body of the planet to be seen through it. The dark line separating the two outer rings is known as Cassini's division in honour of its discoverer. The rings lie almost exactly in one plane, which is inclined at 27° to the planet's orbit and is sensibly that of its equator. It has been proved theoretically that the rings consist of a vast swarm of small individual particles, each pursuing its own orbit like a satellite around Saturn; this has been confirmed observationally by the spectroscope. This makes even more remarkable the extreme thinness of the rings, which is illustrated every 15 years, when the plane of the rings passes through the Earth; they then become invisible even in the greatest telescopes. Thus they cannot present when edgewise a width of more than a very few miles.

Saturn has nine satellites, of which the largest, Titan, is easily seen with a small telescope. The seven innermost satellites revolve nearly in the plane of the rings. When the rings are seen edgewise, these inner satellites may transit the planet or be eclipsed in the same manner as those of Jupiter. The faint outermost satellite, Phœbe, has a retrograde motion.

From the few spots that have been observed on Saturn's surface, the rotation period at the equator is about $10^{\text{h}} 15^{\text{m}}$, in higher latitudes $10^{\text{h}} 38^{\text{m}}$ has been found in the northern hemisphere and $10^{\text{h}} 37^{\text{m}}$ in the southern. There is thus some analogy with Jupiter, but we are ignorant of the behaviour of intermediate zones.

The density of Saturn is less than three-quarters that of water; the oblateness is even more marked than is Jupiter's, the equatorial diameter exceeding the polar by about one part in nine. The general appearance of the disc is banded, but the dusky belts are fewer and wider than those on Jupiter and present less contrast with the brighter zones. The atmosphere is known to contain methane and ammonia.

URANUS

This planet was discovered by William Herschel at Bath in 1781, and so has completed only two revolutions since its discovery. It is only just visible to the naked eye, but in a telescope is distinguishable by its disc, which is quite obvious, though less than $4''$ in diameter, and by the different quality of its light. The two outer and brighter of its four main satellites were found by Herschel in 1787; the two inner by Lassell in 1851. Their movement is retrograde in a plane inclined 82° to the plane of the ecliptic. A fifth satellite was discovered by Kuiper in 1948. A period of rotation of $10\frac{1}{2}$ hours has been determined spectroscopically; the direction is the same as that of the satellites.

NEPTUNE

This planet is a telescopic object of about the 8th magnitude, presenting a disc of well over $2''$ in diameter. In 1946 the various learned bodies commemorated the centenary of the discovery of this planet as the result of mathematical deduction. The calculations of John Couch Adams of Cambridge, and of Le Verrier of Paris indicated the position of an unknown planet that was responsible for irregularities in the motion of Uranus. The planet was found near the indicated place by Galle of the Berlin Observatory. Neptune has one satellite, discovered soon afterwards by Lassell, which moves in a retrograde direction like those of Uranus, while another was discovered by Kuiper in 1949. A rotation period of $15\frac{1}{2}$ hours, inferred spectroscopically, is now generally adopted for the planet.

PLUTO

The outermost planet of the solar system was discovered photographically at the Lowell Observatory in March 1930, as a result of a systematic search for a trans-Neptunian planet. The existence of such a planet had been suggested many years before, and, although the predicted elements of the orbit differ in some respects from the true facts, yet these predictions were undoubtedly responsible for the ultimate discovery. The planet was called Pluto, and would appear to be small, with a mass possibly much less than that of the Earth. It would also appear to be a poor reflector of the Sun's light, since it shines only as a star of the 14th-15th magnitude. Its orbit is now sufficiently well defined to allow positions of the planet to be given in the almanacs.

THE MOON

The Moon is the Earth's satellite, and although its motion is highly complicated, it may be considered to revolve about the Earth in an elliptical orbit inclined about 5° to the plane of the ecliptic. Owing to perturbations, the ellipse is continually varying in shape, and the whole orbit twists round in space so that the nodes, or points where the orbit intersects the ecliptic, move in a retrograde direction, making one complete revolution in 18.6 years.

The Moon, whose diameter is 2160 miles, rotates in the same time that it revolves ($27^{\text{d}} 7^{\text{h}} 43^{\text{m}}$) so that the same face is always presented to the Earth. The tilt of its axis, and the variable speed

in the orbit, cause it to undergo an apparent swaying motion called libration, which enables us, in the long run, to see rather more than an exact half of the lunar surface. In a telescope this surface shows many objects of great beauty and interest, the rugged ranges of mountains, the craters and plains forming an impressive picture of jet-black shadows and bright highlights.

The revolution of the Moon about the Earth with reference to the Sun takes rather longer than a sidereal revolution, so that the phases of the Moon repeat themselves in a period that varies slightly about a mean of $29\frac{1}{2}$ days. Each month the Moon passes in front of all stars in its path. Such an *occultation* causes the light of the star to be extinguished instantly. This, together with the sharpness and intensity of the shadows on the Moon, indicates a complete lack of atmosphere. Eclipses occur at two "seasons" of the year, when the Moon is near one of its nodes and in line with the Earth and the Sun. A lunar eclipse takes place when the Full Moon passes through the Earth's shadow, and is visible over half the Earth at any one time. A solar eclipse takes place when the New Moon passes in front of the Sun, and is visible only from a rather small area of the Earth.

As a result of its eastward movement among the stars, the Moon rises later each day by a variable amount that depends on the inclination of its apparent path to the observer's horizon. When this angle is small, the Moon rises at much the same time for several days in succession. Although this occurs each month, it is most noticeable in high latitudes at the Full Moon nearest to the Autumnal Equinox. This is the Harvest Moon, although in this Almanack the name is always given to the Full Moon of September. The next Full Moon is called the Hunters' Moon.

A FEW OF THE CHIEF LUNAR FORMATIONS

Apennines.—An extensive mountain range somewhat similar to terrestrial features. Visible to naked eye when projecting into the dark part of the disc. Length, 460 miles; highest summit (Huyghens) reaches 18,000 feet.

Aristarchus.—A lunar crater in N.E. quadrant. The brightest object on the Moon. This crater is visible as a luminous spot when all the surrounding region is involved in shadow.

Mare Crisium.—A dark grey oval plain visible to naked eye near W.N.W. limb of Moon. Extends 280 miles N. to S. and 354 miles E. to W. Well seen five days after new or a few days after full.

Mare Serenitatis.—Lies N. of the Moon's centre, and extends over 428 miles. A nearly circular dark plain. Contains a crater, Linne, formerly suspected of change. This *mare* is visible to naked eye.

Tycho.—Towards S. limb. "The metropolitan crater of the Moon." A fine crater 54 miles in diameter and 16,600 feet deep. Central hill nearly a mile high. Tycho is the centre of a remarkable system of bright rays radiating from it that are very conspicuous at the time of full Moon.

THE AURORA BOREALIS (AND AUSTRALIS)

An aurora is the visible counterpart of a marked disturbance of the Earth's magnetic field (a "magnetic storm") apparently due to the action of a stream of electrified particles shot earthwards from localized regions of the Sun, such as that of a big sunspot. The glow of auroral patches, arches or streamers results from the action of this solar stream upon the constituent gases of the Earth's upper atmosphere. The usual height of the lower limit of the auroral luminescence is about 60 miles; upwards, it may extend to 300 miles or higher. Aurorae are very frequent in the so-called auroral zones (magnetic latitude about 67°); they are most frequent for the Earth as a whole near sunspot maximum. Although the solar origin of great displays (e.g. 1938 January 25 and 1949 January 24-26) can be traced to particular sunspots with solar flares, many lesser auroral displays cannot be thus associated. However, their solar origin is evidenced by their tendency to recur at intervals of 27 days, the time required for the Sun to turn once on its axis with respect to the Earth.

THE ZODIACAL LIGHT

This faint phenomenon of the late evening or early morning sky can be seen only when the air is sufficiently clear, the sky quite dark, and the ecliptic making a fairly steep angle with the horizon. It then appears as a cone of faint light stretching up from the position of the Sun (below the horizon) in the direction of the ecliptic, with its apex anything from 60° to 110° from the Sun. In our latitudes it is best seen after sunset in spring and before sunrise in the autumn, when it may appear brighter than the Galaxy in its brightest area. After the spring equinox and before the autumn equinox, the base is seen to extend greatly to the northwards, and even to form a faint segmental glow over the Sun's mid-night position when it is below the twilight limit. A much fainter glow, the Zodiacal Band, some 12° wide, coincides throughout with the ecliptic, with a brighter but still exceedingly faint oval patch a few degrees wide at the anti-solar point, called the Counterglow. These phenomena suggest the reflection of sunlight from a cloud of discrete minute particles surrounding the Sun and extending beyond the Earth's orbit.

METEORS

The scattered particles which move in streams about the Sun give rise to occasional showers of meteors, shooting-stars or fireballs—bodies that differ only in size. They are visible in varying numbers every night, being sometimes so abundant as to be quite spectacular. Often on a particular date or dates, meteors radiate from the same part of the heavens every year. This is because a stream of particles more or less dense, is moving in an orbit that intersects that of the Earth. There is reason to believe that some meteor swarms are associated with certain comets.

METEOR SHOWERS

Date	Radiant		Name
	R.A.	Dec.	
	°	°	
January 3.....	230	+52	Quadrantids
April 20-22.....	271	+33	Lyrids*
May 2-6.....	337	- 1	η Aquarids*
June 27-30.....	213	+53	Pons-Win- neckheids*
August 10-13.....	47	+58	Perseids
October 9.....	264	+55	Giacobinids*
October 18-23.....	96	+15	Orionids*
November 16-17...	152	+22	Leonids*
December 10-13..	113	+32	Geminids
December 22.....	205	+75	Bečvár's Stream*

* Not plentiful each year.

The real paths of a great number of meteors have been computed, and the average heights found to be about 70 miles at the beginning and about 48 miles at the end. The speeds vary from 10 to 45 miles per second. Fireballs, or very bright meteors, appear at all times of the year unexpectedly so that they are often imperfectly noted and computation of their flight is not practicable.

Above is a list of the nights when meteor showers may be expected, with the radiant points from which the meteors diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g. the Perseids, the apparition lasts beyond these limiting dates, and the position of the radiant, which changes from night to night, is given for the date of maximum.

RADIO ASTRONOMY

The early experiments by Jansky in 1932 showed that radio waves were received from outer space, and today the ability of the shorter waves (1 cm. to 10 m.) to penetrate our atmosphere has become of great value in astronomy.

In the years 1942-45 Army radar units discovered the intense radio emission from the Sun, and further work has shown that this consists of a nearly constant level of radiation, together with the outbursts of "noise" of very much greater intensity. Some of these outbursts are known to be associated with sunspots, others with solar flares, while certain sudden short bursts show no relation to visible features of the Sun's surface.

Radio waves are also received from the night sky, and improvements in technique have made it possible to locate the sources of this radiation. These are found to be of negligible area, so that the bodies responsible must be of stellar dimensions. More than 100 of the "radio-stars" are known, and the stronger emissions seem to be concentrated in the region of the Milky Way; but few of them coincide in position with any visible star. There seems little doubt that the universe contains as many dark radio-stars as it does luminous stars; and this view is supported by the recent discovery that the Great Nebula in Andromeda (which is itself a galaxy

similar to our own) also sends out radio-waves, of total intensity about the same as that of our own stellar system.

COMETS

A comet is distinguished from other bodies in the solar system by its appearance: a hazy luminous patch moving in the sky, more or less round and usually brighter in the centre, sometimes with a star-like nucleus there; and from it not infrequently extends a tail which may, in bright comets, reach a length of as much as 200 million miles—a fine spectacle. Each year several new comets are found, but most are very faint and a really bright one only appears, on the average, every few years. A fairly recent one of interest, designated 1948 I, blazed forth unexpectedly, close to the Sun, at the moment of total eclipse on November 1 that year, and, for those in the southern hemisphere, made a magnificent object before dawn in the middle of the month, with a tail 20° long stretching across the sky.

Although generally large in volume, a comet is small in mass, probably less than one-millionth that of the Earth even in the largest comets—the centre being composed mainly of an aggregation of pieces of matter mostly of sizes between that of pebbles and fine dust, but probably containing also a solid core a few miles in diameter. As a comet approaches the Sun, the solar radiations cause it to brighten rapidly and, near the Sun, these are powerful enough to repel some of the smallest particles in the comet, thus causing the formation of one or more tails. And as the comet recedes, the tail goes first since it always points away from the Sun. As the distance increases, the tail shrinks and the whole comet fades until invisible.

Most comets follow paths which are very elongated ovals (ellipses) and return to the Sun, if at all, only after hundreds or thousands of years. The arrival of such comets cannot therefore be predicted. A few dozen comets, however, mostly too faint ever to be seen with the unaided eye, follow paths in smaller ellipses which are sufficiently accurately known to enable predictions to be made of their returns. The most famous and brightest of these periodic comets is Halley's comet, the first for which a return was predicted, and whose spectacular appearances about every 75 years have been traced back over more than 2000 years—it is next due early in 1986. Two very faint comets are known which travel in nearly circular orbits and, on this account, come within reach for photographic observation every year: Schwassmann-Wachmann (2), designated 1925 II, and Oterma. The former is of special interest, not only because its orbit is the only known one lying wholly between Jupiter and Saturn, but on account of the unexpected outbursts in brightness it occasionally manifests.

Apart from these two "annuals" there are three comets for which returns in 1954 are predicted with confidence: Reinmuth (2), Pons-Brooks and Encke. All three will be badly placed for observation when near the Sun and brightest; and they are unlikely to be seen without the aid of telescopes of moderate or large size. Further information about them will be found in the British Astronomical Association's *Handbook* for 1953.

The Earth

The shape of the Earth is that of an oblate spheroid or solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles are circles. The length of the equatorial axis is about 7927 miles, and that of the polar axis 7900 miles. The mean density of the Earth is 5.5 times that of water, although that of the surface layer is less. The Earth and Moon revolve about their common centre of gravity in a lunar month; this centre in turn revolves round the Sun in a plane known as the ecliptic, that passes through the Sun's centre. The Earth's equator is inclined to this plane at an angle of $23\frac{1}{2}^{\circ}$. This tilt is the cause of the seasons. In mid-latitudes, and when the Sun is high above the Equator, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface; these effects combine to produce summer. In equatorial regions the noon altitude is large throughout the year, and there is little variation in the length of the day. In higher latitudes the noon altitude is lower, and the days in summer are appreciably longer than those in winter.

The average velocity of the Earth in its orbit is $18\frac{1}{2}$ miles a second. It makes a complete rotation on its axis in about $23^h 56^m$ of mean time, which is the sidereal day. Because of its annual revolution round the Sun, the rotation with respect to the Sun, or the solar day, is more than this by about four minutes (see p. 142). The extremity of the axis of rotation, or the North Pole of the Earth, is not rigidly fixed, but wanders over an area roughly 60 feet in diameter.

THE TIDES

The tides are caused by the attraction of the Moon for the waters of the Earth, while a similar but smaller effect is due to the Sun. Normally there are two high tides every day, about $12\frac{1}{2}$ hours apart. They thus occur about 50 minutes later than those of the previous day, corresponding to the $24^h 50^m$ interval between consecutive meridian passages of the Moon. The height of the tide varies considerably. The highest, called Spring Tides, always occur about the time of New or Full Moon, when the lunar and solar attractions act together. At Neap Tides, which occur about First and Last Quarter, the rise and fall is only about half as much as at Spring Tide.

The tidal flow of water across the Earth is greatly modified by the shape of the coastlines and other geographical conditions. The complicated motion of the Moon, its changing position north or south of the equator, and its varying distance from the Earth, all add small variations; it is thus impossible to predict tides theoretically. Tide-tables for any place are always constructed from an analysis of past observations of times and heights. It is found that the height can be expressed as the sum of a series of periodic terms, which can be carried forward.

High water does not necessarily occur at the same time as the meridian passage of the Moon, nor do springs and neaps necessarily occur on the same day as the phases stated. Thus at London Bridge the tide is high when the Moon is somewhat west of the meridian, while Spring Tides occur about $2\frac{1}{2}$ days after New or Full Moon.

The shape and depth of a channel or estuary very greatly modify the nature of the tides. At some places one of the daily tides becomes so small as to be negligible, while in other channels (e.g. Southampton Water) the high tides are doubled. The difference between high and low water, or range of the tide, may vary from a small amount, as in the land-locked Mediterranean, up to 40 feet in the Severn Estuary and 50 feet in the Bay of Fundy.

As the energy involved in this tidal flow is considerable, various schemes for harnessing tidal energy have been evolved. As a consequence of the friction caused by tidal flow, the Earth's period of rotation is diminishing by about a thousandth of a second per day every century. Although very small at present, this effect was greater in the past, and has played a considerable part in the history of the Earth-Moon system.

TERRESTRIAL MAGNETISM

In the earliest years of experimental science it was known that a light bar of iron rubbed with a piece of the commonly occurring iron ore magnetite, or lodestone, was subject to a directing force impelling it to take up a constant direction when freed from other restraint. Before the 12th century, voyagers were using this mysterious property to guide themselves, their method being to place a light magnetized needle on a reed floated on water. From this primitive device the Mariner's compass subsequently developed. The direction, though roughly north to south, was by no means accurately so. It was found by Columbus on his voyage across the Atlantic that whereas the needle pointed east of north at the outset, it pointed north-north-west at the end.

In 1576 Robert Norman, an English instrument maker, was impressed by the fact that a compass needle perfectly balanced before magnetization, was no longer in balance after being magnetized, but its north-seeking end was always lower. He devised an instrument to show that, in London, the needle would incline at about 72° to the horizontal if allowed to swing on an axis.

William Gilbert, physician to Queen Elizabeth I, gave the first approximately correct explanation of the then known facts. Magnetized needles behave

as if in proximity to a large magnetized sphere, which he conceived to be the Earth itself.

It was soon found that the direction of the force in a particular locality slowly changed. Henry Gellibrand, observing near Greenwich in 1634, found the direction to be about 4° east of north, whereas there was undoubted evidence that in 1580 it had been about 11° east in the same neighbourhood. In 1722, Graham, the clockmaker, found that the direction oscillates slowly through a small angle every day. The movement is eastwards till about 8 a.m., then rather quickly westwards till about a p.m., after which there is a gradual return eastwards. The amplitude may be as much as $15'$ in the summer.

The compass needle points along a magnetic line of force passing through the "magnetic poles." At these poles a magnetized needle supported on a horizontal axis will point vertically downwards, while its direction will be indefinite, since the horizontal directing force has vanished. The north magnetic pole was located by Sir James Ross in 1831 in Arctic Canada at 70° N., 97° W. The Norwegian explorer, Amundsen, in 1904, placed the position about 35 miles north-east of Ross's site. Recent (1946-7) investigations by Canadian surveying parties indicate that the present position is approximately 73° N., 100° W., and is not stable. From observations by members of Mawson's Australian Antarctic Expedition in 1912, the position of the south magnetic pole has been inferred as approximately 71° S., 151° E. The north magnetic pole is some 1200 miles from the geographical north pole, and is not strictly antipodal to the south magnetic pole; indeed, the line joining them passes the Earth's centre at a distance of about 700 miles.

There is also a "magnetic equator", at all points of which the vertical force is nil and a magnetized needle remains horizontal on its axis. This line runs between 5° and 10° north of the geographical equator in the eastern hemisphere, turns sharply south off the West African coast, and crosses South America through Brazil, Bolivia and Peru; it re-crosses the geographical equator in mid-Pacific.

It is evident that the compass needle will not, in general, indicate true north. For example, in Greenland it points 50° to the west, and in British Columbia 30° to the east. A line, running through places where the magnetic and true north coincide is known as an agonic line. One such passes from Hudson Bay through Ontario, Ohio, Carolina, the Bahamas, over South America to Monte Video and the South Atlantic; a second, from Sweden and the Baltic, across Poland to Rumania, Asia Minor, Egypt and Ethiopia, whence it passes south of Arabia, across northern India to China and eastern Russia, returning through the north-western Pacific Ocean to Siam, and thence through Sumatra to West Australia.

Reference has already been made to secular changes in the Earth's field. The following table indicates the changes in magnetic declination (or variation of the compass). Similar, though much smaller, changes have occurred in "dip" or magnetic inclination. Combination of the two

phenomena suggests that a whole cycle may perhaps occupy several hundred years; it is uncertain whether an exact repetition would then follow.

London		Greenwich	
1580	$11^\circ 15'$ E.	1820	$24^\circ 21'$ W.
1622	6 00 E.	1840	$23^\circ 20'$ W.
1657	0 00	1860	$21^\circ 14'$ W.
1692	6 00 W.	1880	$18^\circ 33'$ W.
1723	14 07 W.	1900	$16^\circ 29'$ W.
1773	$21^\circ 09'$ W.	1920	$14^\circ 09'$ W.
1805	$24^\circ 08'$ W.	1925	$13^\circ 10'$ W.

In order that up-to-date information on the variation of the compass may be available, many governments publish magnetic charts on which there are lines (called isogonals) passing through all places at which specified values of declination will be found at the date of the chart. The earliest world-chart of magnetic declination was published in 1701 by Edmund Halley, later Astronomer Royal. Charts of other magnetic elements, such as horizontal intensity, vertical intensity, and dip are also published.

Since the secular change in long periods is not predictable with sufficient accuracy in many parts of the world, information on the subject has to be obtained from fixed observatories. Magnetic Surveys both by sea and land must also be undertaken periodically.

In the British Isles, isogonal lines now run from north-east to south-west, making an angle of about 20° with the meridians. Though there are considerable local deviations due to mineralogical causes, a rough value of magnetic declination may be obtained by assuming that at 50° N. on the meridian of Greenwich, the value in 1951 is $8^\circ 47'$ west and allowing an increase of $15'$ for each degree of latitude northwards and one of $33'$ for each degree of longitude westwards. For example, at 53° N., 5° W., declination will be about $8^\circ 51' + 45' + 165'$, i.e. $12^\circ 21'$ west. The average annual change at the present time is about $8'$ decrease.

The phenomena of terrestrial magnetism have been the subject of continuous study at fixed observatories since early in the 19th century. The number of such observatories now approaches 100—widely scattered over the globe. In Great Britain three are maintained by the Government, namely at Abinger, Surrey (formerly at Greenwich), at Eskdalemuir in Dumfriesshire, Scotland, and at Lerwick, Shetland Islands. The mean values of the magnetic elements at Abinger are given below.

The phenomena of terrestrial magnetism are due primarily to a field of magnetic force emanating from within the Earth, the origin and behaviour of which is still not satisfactorily explained, and secondarily to magnetic fields imposed from without by the flow of streams of ions or electric currents in the highest regions of the atmosphere. It is undoubted that the latter effects are closely associated with the position of the Sun and with the state of activity of that body, for the diurnal oscillation of the needle everywhere follows local time,

and is also more than twice as great in summer as in winter in temperate latitudes. Again, it is considerably larger during years of increased solar activity (as indicated by the occurrence of many sunspots) than in the quiet years.

‡ In gauss

Magnetic Storms. Occasionally—sometimes with great suddenness—the Earth's field is subject for several hours to marked disturbance, indicated by continuous irregular movements of the recording magnets and accompanied in many instances by a widespread display of auroræ. In severe magnetic storms, induced earth-currents also develop which seriously interfere with telegraphic communication. The disturbances are generally ascribed to the passage of the Earth through vast streams of ions or electrified particles that have been expelled from the Sun during an explosive outburst at the solar surface. Such eruptions can be seen and photographed. Often a conspicuous spot has been apparent near the centre of the Sun's disc a day or two before; but the appearance of a spot is by no means always followed by the occurrence of a magnetic storm. There is a tendency for disturbances to recur after intervals of 27 or 28 days, corresponding closely to the apparent period of rotation of the Sun on its axis; this would be explained if the source of the disturbance were located on a particular area of the Sun's surface.

The Zodiac

The Zodiac is an imaginary belt in the heavens within which lie the apparent paths of the Sun, Moon and major planets. It is bounded by two parallels generally taken as lying 8° on either side of the ecliptic or path of the Sun in its annual course. The Zodiac is divided into twelve equal parts of 30° called Signs, which are not used by astronomers, but have some import in astrology, for which the division of the Zodiac was probably made originally. The Signs of the Zodiac take their names from certain of the constellations with which they once coincided. They are assumed to begin at the vernal equinox or intersection of the plane of the ecliptic with that of the equator. This point is still called the First Point of Aries, although the Sign of Aries now lies in the constellation of Pisces, some 30° to the west. This retrograding of the equinox by about 50" a year is due to precession; the signs no longer coincide with the constellations whose names they bear.

It is unknown when or by what race the stars were first grouped into constellations; but undoubtedly the twelve figures that lie in the Zodiac have been considered of special importance from very early times, for indications of them are found more often than any others on ancient monuments. The First Point of Aries must have coincided with this constellation rather more than 2000 years ago, or about the time of the Greek astronomer Hipparchus, who lived in the second century B.C., and may be considered the founder of accurate sidereal astronomy.

Much mystical erudition has been bestowed upon the Signs of the Zodiac, but we are on surer ground in noting that Mazzaroth (Job xxxviii, 32), which means to encircle or surround, was the Hebrew

name for the Zodiac. The latter word is evidently of Greek derivation.

A catalogue has been made (Grimaldi, 1905) of all, so far as is known, sculptured or incised representations on ancient monuments or tablets of the traditional constellation figures, either Zodiacal or otherwise, together with many modern pictures of the Zodiac. The first in the list is a roughly shaped, upright, black stone about 2½ feet high and 1½ feet broad in the Babylonian room of the British Museum on the front of which are lightly incised ten out of the twelve Signs and other constellation figures. This was found near Bagdad and its date is estimated to be about 1187–1175 B.C.

The hour when the Sun enters each Sign of the Zodiac, which varies year by year in accordance with the leap-year cycle, and slightly for other reasons, is given in the heading of page I of each month.

These times of entry in 1954 are shown in the Table below with the names of the signs and their symbols.

SIGNS OF THE ZODIAC

In 1954 the Sun enters—	d	h
♒ Aquarius, the Water Bearer.....	Jan. 20	14

Tidal Constants

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the appropriate Time of High Water at the Standard Port (as shown on pp. 169, 170, etc.) and adding thereto the quantities annexed. The time thus found will be Greenwich Time for British, Irish, French and Belgian Ports, and Amsterdam Time for Netherlands Ports. The rise of the tide at Springs and Neaps is given in the last two columns. An * denotes Range of Tide. During the period of SUMMER TIME one hour must be added to the times shown on pp. 169-180, before the system is applied.

The Standard Ports referred to in the heading are given in *italic*.

EXAMPLE.—Required times of high water at Stranraer on April 6, 1954:—

(a) Morning Tide.

Appropriate time of high

water at Greenock 13h. 40m. April 5

Add tide interval 11h. 53m.

Sum 25h. 33m.

Subtract 24h. 24h. 0m.

Time of high water at
Stranraer, April 6th . . . 1h. 33m. a.m.

(b) Afternoon Tide.

Appropriate time of high

water at Greenock 1h. 55m. April 6.

Add tide interval 11h. 53m.

Sum 13h. 48m.

Subtract 12h. 12h. 0m.

Time of high water at
Stranraer, April 6th . . . 1h. 48m. p.m.

Chronological Notes

TIME MEASURES

Kelvin (1883) estimated the age of the earth's crust at 20-40 million years. Study of radio-activity has since shown cooling to have been slower. Holmes and others gave 1,500-2,000 million years as the age of the oldest known rocks. Jeffreys suggests an age not exceeding 8,000 million years for the separate existence of the earth, which, probably with other related planets, separated from the sun after a star-collision. Very early rocks, almost without traces of fossils, are variously named in North America and Europe and account for a period down to about 500 million years ago.

PALÆOZOIC (Old Animal Life) PERIODS include:—

Cambrian, Ordovician and Silurian rocks, all named from Wales (Cambria, Ordovices, Silures, the two latter ancient Celtic peoples). These rocks account for about 200 million years and there then followed a major phase of mountain-building, called *Caledonian* because studied early in Scotland, characterised by N.E.-S.W. lines of hills and valleys in several areas.

Devonian, including the Old Red Sandstone.

Carboniferous, including Mountain Limestone, Millstone Grit and Coal Measures.

These rocks account for about 200 million years and then there followed a major phase of mountain-building called *Hercynian* because widespread in W. Germany and adjacent areas. In Britain there are E.-W. lines of hills and valleys, and some N.-S.

MESOZOIC (Middle Forms of Life) PERIODS include:—

Permian rocks, widespread in Perm district, U.S.S.R., *Triassic*, including New Red Sandstone. *Jurassic*, important in the Jura Mts. *Cretaceous*, including the Greensands and the Chalk of England. In the Mesozoic, modern large land groups of animals, reptiles, birds and mammals first appear, but almost no modern genera or species of animals are known.

CAINOZOIC or CENOZOIC (Recent forms of life) PERIODS include:—

Eocene. A few existing genera or species. *Oligocene*. A minority of existing forms. *Miocene*. Approach to a balance of existing and extinct forms. *Pliocene*. A majority of existing forms. *Pleistocene*. A very large majority of existing forms. *Holocene*. Existing forms only, save for a few exterminated by man. In the last 50 million years, from the Miocene through the Pliocene, the Alpine-Himalayan and the circum-Pacific phases of mountain building reached their climax.

During the Pleistocene period ice-sheets repeatedly locked up masses of water as land ice, its weight depressed the land, but the locking up of water lowered sea-level by 100-200 metres. Milankovitch has worked out variations of radiation theoretically receivable from the sun and has reached conclusions not very markedly different as to dates from those of Penck who studied sediments, and both can fit into Deperet's scheme based on study of river terraces. Milankovitch gives 600,000 years for the Pleistocene.

Phases of the Pleistocene:—

(a) Early Glaciations (probably a), Gunz glaciations of Penck's Alpine series. About 600 to 500 thousand years ago.

(b) An interglacial phase with high sea level, Milazzian terraces (of Deperet's series) around the Mediterranean. About 500,000 years ago.

(c) A second pair of Glaciations, the Mindel of Penck's series. About 500 to rather before 400 thousand years ago.

(d) A long interglacial phase with high sea level, but less high than during (b). Tyrrhenian terraces around the Mediterranean. From about 400 to about 200 thousand years ago.

(e) The penultimate series of glaciations (probably 3), the Riss of Penck's series. About 200 to 150 thousand years ago.

(f) An interglacial phase with fairly high sea level, less high than during (d). Monastirian terraces around the Mediterranean. From about 150 to about 120 thousand years ago.

(g) The ultimate series of glaciations (probably 3, preceded perhaps by a cool phase), the Wurm of Penck's series. From about 115 to rather more than 20 thousand years ago.

(h) The last glacial retreat merging into the Holocene period about 10,000 or 8,000 years ago.

MAN IN THE PLEISTOCENE

In the East African Miocene have been found by Hopwood and Leakey fragmentary remains of apes with possible human links in thigh bone characters.

In S. Africa at Taungs, Sterkfontein and Kromdraai have been found remains of *Australopithecus*, *Plesianthropus* and *Paranthropus*, possibly linked with early man in limb characters and some features of skull and teeth though the brains are small and rather ape-like. The cave deposits in which they occur are supposed to be late Pliocene or early Pleistocene. The late Dr. Broom inferred that *Australopithecus prometheus* made use of fire, i.e., was, at any rate, near-human.

Java and Peking finds began with Dubois' discovery (1892) of an imperfect skull cap, some teeth and a possibly related femur indicating the erect posture. Later finds by von Koenigswald and by Weidenreich (1937-42) have emphasised the human relationship of the Java specimens, and also give evidence of gigantism (the name *Meganthropus* has been used). The specimens are usually given a Middle Pleistocene age. Oppenorth (1932) discovered robust skulls and human Pleistocene bones on a terrace of the Solo river, Java. Twelve specimens from Chou Kou Tien near Peking studied by Black and Weidenreich and called *Sinanthropus* are broadly like the Java finds; the name *Pithecanthropus* had better be used for all.

A jaw from Mauer, Heidelberg, found 1902, and dated to the mid Pleistocene is very large but human in form. A skull cap from Neandertal near Düsseldorf, Germany, has been under discussion for 100 years. It and later found congeners belong to the onset of the 4th series of Glaciations (Penck's Wurm). The best preserved of these skulls is that of La Chapelle aux Saints (France) with very strong brow-ridges. Related skulls of rather earlier date from Steinheim, Ehringsdorf, Krapina and elsewhere are less specialized and more akin to modern man. Skulls from Sacco Pastore and Circeo in Italy are related to the Neandertal group.

Mt. Carmel, Palestine, has yielded to Professor Dorothy Garrod and Dr. McCown several mid- or late Pleistocene specimens apparently related both to modern types and to the Neandertal group.

A skull from Gallie, and a skull from Broken Hill, Rhodesia are related to the Neandertal group.

Recently Oakley has estimated the age of Pleistocene fossil bones from their fluorine content. The back part of a skull from Swanscombe, N. Kent, has in this way been dated to the mid Pleistocene. Its

discoverer, Marston, has won widespread support for his view linking it with modern types.

The Piltdown skull and jaw remain subjects of controversy. The skull is very like that of later mankind, the jaw is ape-like. The finds are now dated by Oakley's method as later Pleistocene, so the name *Boanthropus* is inappropriate.

With the last retreat of the ice sheets it seems that the Neanderthal group, and probably the Pithecanthropus group, became extinct. Well-known specimens of man of modern type with diversity of form have been found at Combe Capelle, Cromagnon, Chancelade and elsewhere in the later Pleistocene in France and others in Czechoslovakia.

HUMAN CULTURAL STAGES

Until about 7 or 8 thousand years ago men lived by hunting and collecting. In the middle of the Pleistocene they already made finely shaped hand axes (Abbevillean and Acheulian) from stone cores by chipping off flakes, using flint, chert, obsidian, rhyolite, quartzite, etc. in many regions, and these cultures spread from Africa to Spain, France and Britain during some interglacial periods. Apparently the men hunted and made pitfalls for animals as Leakey has shown at Olorgesailie in Kenya, while women and children collected. Fire was used very early. In the continental interior of Eurasia rough stone flakes were long used rather than shaped stone cores and apparently in cold periods at any rate this culture spread west to Britain. In the later part of the Riss-Wurm interglacial, stone flakes became finer especially in regions where contact was made with makers of core-tools, and in some groups both cores and flakes were used.

With the last retreat of the ice-sheets stone flakes became the dominant tools, with diverse types suited to scraping, boring, sawing, etc.—Aurignacian, followed in France by Solutrian, in which long leaf-like flakes were treated as cores and shaped very skillfully by pressing off flakes. The Magdalenian stage next following used flakes but specialised in implements of bone, horn and ivory. In some areas the Aurignacian grades into the Magdalenian and this seems to be largely the case in parts of Britain. All the above cultures are often grouped as Palaeolithic.

About 8 or 7 thousand years ago people in S.W. Asia began to cultivate cereals on river mud laid down by annual floods thus keeping the soil fertile and allowing durable settlement with concomitant advances in mud brick construction, pot-making, stone grinding, which had begun earlier and gave an improved control of shape, carpentering, weaving and other inventions. In all this development

the Nile valley was early concerned and its regular floods from summer rains in Abyssinia could be managed to give such an advantage that Egypt gained a unique primacy in early history. Domestication of animals was added very early to cultivation of crops, most probably as a source of milk, flesh, leather, sinews, etc. Neolithic Culture was thus characterised by stone axes shaped by grinding or rubbing, by cultivation, usually by domestic animals, often by durable settlements and a variety of arts and crafts.

Especially after the practice of castration of surplus male animals was introduced, domestic beasts were used for work, notably for pulling a modified hoe to scratch the drying surface of river-mud and so keep it from caking too hard. This is the early plough, valuable in lands where plant food in the soil is drawn up nearly to the surface as moisture rises and evaporates. Animals were also used as porters and tractors.

Heating stones in fires, probably for water-heating, led to the discovery of impure copper and the invention of bronze (standardised at about 10 per cent. tin and 90 per cent. copper) at the beginning of the Bronze Age in S.W. Asia and/or Egypt. By that time, about 5,000 years ago, cities and trade were developing and the basic arts were spreading to the Indus basin, the Mediterranean and the loess areas of Central Europe. Western Europe on the one hand and N. China on the other were affected somewhat later but more than 4,000 years ago; and China rapidly advanced to a high skill in pottery and bronze. Over 3,000 years ago in Anatolia the smelting of iron was developed, and it spread thence in the next centuries, beginning the Iron Age. Iron nails and tools made possible larger boats, houses, furniture and especially larger ploughs working deeper into the earth and so suited to cooler lands, where plant food was often deep in the soil because evaporation was not very strong and rain might occur at every season. So the farmer needed to bring up the deeper layers to the surface in north-west Europe. With the spread of iron, especially about 2,000 to 1,000 years ago, north-west Europe emerged from its former low status and went ahead, still more after houses were improved with more privacy, chimneys and beds.

The evolution of culture in the Americas is much discussed. Early drifts of hunters via Alaska may have occurred in the late Pleistocene. Probably a good deal of Neolithic culture (stone implements, pottery, etc.) spread by the same route to America about or after 5,000 years ago but did not take Asiatic cereals or domestic animals. America also received contributions to its life by maritime routes especially following the North Pacific currents.

TIME MEASUREMENT AND CALENDARS

MEASUREMENTS OF TIME

Measurements of Time.—These are based on the time taken by the earth to rotate on its axis (*Day*); by the moon to revolve round the earth (*Month*); and by the earth to revolve round the sun (*Year*). From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon (when the sun crosses the meridian), and these hours are designated A.M. (*ante meridiem*); and again from noon up to 12 at midnight, which hours are designated P.M. (*post meridiem*), except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered 0 to 23 from midnight to midnight.

Colloquially the 24 hours are divided into *day* and *night*, day being the time while the sun is above the horizon (including the four stages of twilight defined on p. 141). Day is subdivided further into *morning*, the early part of daytime, ending at noon; *afternoon* from noon to 6 p.m. and *evening*, which may be said to extend from 6 p.m. until mid-night. *Night*, the dark period between day and day, begins at the close of Astronomical Twilight (see p. 141) and extends beyond midnight to sunrise the next day.

The names of the *Days*—Sunday, Monday, Tuesday (*Tiw*—God of War), Wednesday (*Woden* or *Odin*), Thursday (*Thor*), Friday (*Frig*—wife of *Odin*), and Saturday are derived from Old English translations or adaptations of the Roman titles (*Sol*, *Luna*, *Mars*, *Mercurius*, *Jupiter*, *Venus* and *Saturnus*).

The *Week* is a period of 7 days.

The Month in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary from 28 (or 29) days to 31.

The Year.—The *Equinoctial or Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365.2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *bissextile* (see Roman Calendar) or *Leap Year* and consists of 366 days, one day being added to the month February, so that a date "leaps over" a day of the week. The last year of a century is not leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

The Historical Year.—Before the year 1752, two Calendar systems were in use in England. The Civil or Legal Year began on March 25, while the Historical Year began on January 1. Thus the Civil or Legal date 1658 March 24, was the same day as 1659 March 24 Historical; and a date in that portion of the year is written as: March 24 1658, the lower figure showing the Historical year.

The Masonic Year.—Two dates are quoted in warrants, dispensations, etc., issued by the United Grand Lodge of England, those for the current year being expressed as *Anno Domini 1954—Anno Lucis 5954*. This *Year of Light* is based on the Book of Genesis 1: 3, the 4000 year difference being derived from *Ussher's Notation*, published in 1654, which placed the Creation of the World in 4000 B.C.

Regnal Years.—These are the years of a sovereign's reign, and each begins on the anniversary of his or her accession: e.g. Regnal year 2 of the present Queen began on Feb. 6, 1953. The system is used for dating Acts of Parliament. The *Summer Time Act* of 1925, for example, is quoted as 15 and 16 Geo. V. ch. 64, because it became law in the session which extended over part of both of these regnal years. The regnal years of Edward VII began on January 22, which was the day of Queen Victoria's death in 1901, so that Acts passed in that reign are, in general, quoted with only one year number, but year 10 of the series ended on May 6, 1910, being the day on which King Edward died, and Acts of the Parliamentary Session 1910 are headed 10 Edw. VII. and 1 Geo. V.; Acts passed in 1936 were dated 1 Edw. VIII. and 1 Geo. VI.; Acts passed in 1952 were dated 16 Geo. VI. and 1 Elizabeth II.

New Year's Day.—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on the 25th March, and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1752. But in and since 1752 the civil year has begun with Jan. 1. Certain dividends are still paid by the Bank of England on dates based on Old Style. The Income Tax year begins on April 6 (the New Style equivalent of March 25, Old Style) in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in Scotland was changed from March 25 to Jan. 1 in 1600. On the Continent of Europe, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal,

and the Roman Catholic Netherlands in 1556, Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

The Longest Day.—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls on June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be the longest day there and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is 365½ days less about 11 minutes, and therefore, if a Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in Leap Year brings it back a day in the Calendar, and at the present time two of the four years in the Leap Year cycle have the longest day on June 21, two on June 22.

Because of the 11 minutes above mentioned the additional day in Leap Year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses, being about 18 hours too soon at the end of the hundred years.

To remedy this the last year of a century is in most cases not a Leap Year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a Leap Year.

The Shortest Day.—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. At the present time this is Dec. 22 in every year (Greenwich date), but later in the century in some years it will be Dec. 21. The difference due to locality also prevails in the same sense as for the longest day.

At Greenwich the Sun sets at its earliest by the clock about ten days before the shortest day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 23 or 24 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

Lord Mayor's Day.—The date Nov. 9 is in accordance with Act of Parliament (24 Geo. II. c. 48), A.D. 1752. The Lord Mayor was previously elected on the day of the Feast of St. Simon and St. Jude (Oct. 28), and from the time of Edward I, at least, was presented to the King or to the Barons

of the Exchequer on the following day, except that day be a Sunday.

The day of election was altered to Oct. 16 in 1346, and after some further changes was finally fixed for Michaelmas Day in 1546, as it now is, but the ceremonies of admittance and swearing-in of the Lord Mayor continued to take place on Oct. 28 and 29 respectively until 1751. In 1752, when Sept. 3 was reckoned as Sept. 14 at the reform of the Calendar, the Lord Mayor was continued in office until Nov. 8, the "New Style" equivalent of Oct. 28.

Dog Days.—The days about the heliacal rising of the Dog Star, noted from ancient times as the hottest and most unwholesome period of the year in the Northern Hemisphere. Their incidence has been variously calculated as depending on the Greater or Lesser Dog Star (Sirius or Procyon) and their duration has been reckoned as from 30 to 54 days. A generally accepted period is from July 3 to August 15.

Metonic (Lunar, or Minor) Cycle.—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly, equal in duration to 19 Solar Years, and, hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). The dates of Full Moon in a cycle of nineteen years were inscribed in figures of gold on public monuments in Athens, and the number showing the position of a year in the Cycle is called the *Golden Number* of that year.

Solar (or Major) Cycle.—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

Julian Period.—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indiction ($28 \times 19 \times 15$).

Roman Indiction.—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

Epact.—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

THE FOUR SEASONS

SPRING, the first season of the year, is defined astronomically to begin in the *Northern Hemisphere* at the Vernal Equinox when the Sun enters the sign Aries (i.e. about March 21) and crosses the Equator, thus causing day and night to be of equal length all over the world; and to terminate at the Summer Solstice. In *Great Britain*, Spring in popular parlance comprises the months of February, March and April; in *North America* the months of March, April and May. In the *Southern Hemisphere* Spring corresponds with Autumn in the Northern Hemisphere.

SUMMER, the second and warmest season, begins astronomically at the Summer Solstice when the Sun enters the sign Cancer (about June 21). The Sun then attains its greatest northern declination and appears to stand still, the times of sunrise and sunset and the consequent length of the day showing no variation for several days together, before and after the Longest Day (June 21 or 22). Summer terminates at the Autumnal Equinox. In popular parlance Summer in *Great Britain* includes the months of May, June and July, Midsummer Day

being June 24. In *North America* the season includes the months of June, July and August.

AUTUMN, the third season, begins astronomically at the Autumnal Equinox (i.e. about September 21) when the Sun enters the sign Libra, the beginning of which sign is at the intersection of the Equator and the Ecliptic, the point in the sky where the Sun crosses from N. to S. of the Equator and causes the length of day and night to be equal all over the world. In *Great Britain* it is popularly held to include the months of August, September and October. A warm period sometimes occurs round about St. Luke's Day (Oct. 18) and is known as "St. Luke's Summer." In *North America*, Autumn, or "The Fall," comprises September, October and November. Autumn ends at the Winter Solstice. In the *Southern Hemisphere* it corresponds with Spring of the Northern Hemisphere.

WINTER, the fourth and coldest season, begins astronomically at the Winter Solstice (i.e. about Dec. 21) when the Sun enters the sign Capricornus, and ends at the Vernal Equinox. In *Great Britain* the season is popularly held to comprise the months of November, December and January, midwinter being marked by the Shortest Day. A warm period sometimes occurs round about Martinmas (Nov. 11) and is known as "St. Martin's Summer." In *North America* the season includes the months of December, January and February. In the *Southern Hemisphere* it corresponds with Summer of the Northern Hemisphere.

THE ROMAN CALENDAR

Roman.—Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the years in Roman reckoning is followed by the letters A.U.C. (*Ab Urbe Condita*), so that the year A.D. 1954 is MMDCCVII (2907) A.U.C. The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months, beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered 22 intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after Feb. 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year 46 B.C. Julius Cæsar, who was then Pontifex Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore sought the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (45 B.C.) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year 46 B.C. was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days *before* the next coming point, the first and last being counted. These three points were (1) the Kalends; (2) the Nones; and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the Table on p. 185. The year containing 366 days was called *bissextilis annus*, as it had a doubled sixth day (*bissexstus dies*) before the March Kalends on Feb. 24—*ante diem sextum Kalendas Martias*, or VI Kal. Mart.

Present Days of the Month	March, May, July, October have thirty-one days	January, August, December have thirty-one days	April, June, September, November have thirty days	February has twenty- eight days, and in Leap Year twenty-nine

THE CHRISTIAN CALENDAR

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Annis Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, A.M. 3761 (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 826. The actual date of the birth of Christ is somewhat uncertain. Dec. 25, 4 B.C., is supported by several lines of argument.

Old and New Style.—In the Julian Calendar all the centennial years were Leap Years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nice, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a Leap Year (see p. 183). This change was adopted by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583, Poland 1586, Hungary 1587, the

German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700–1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Roumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Roumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The difference between the Old and New Styles was 12 days after 1752, 12 days after 1800, and has been 13 days since 1900. It should be added that the word *style* actually connotes the date of the beginning of the year. It happened that a change of the latter from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but is nevertheless expressive.

The *Domincal Letter* is one of the letters A–G which are used to denote the Sundays (Lord's Days) in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1–Feb. 29, the second for March 1–Dec. 31.

Epiphany.—The Feast of the Epiphany, commemorating the manifestation of the infant Jesus to the Gentiles, later became associated with the offering of gifts by the Magi. The day was of

1959.....	Feb. 11	March 29	May 7	May 17	xxvi	Nov. 29

NOTES CONCERNING TABLE OF MOVABLE FEASTS

Ash Wednesday (first Day in Lent) can fall at earliest on February 4 and at latest on March 10.

Easter Day can fall at earliest on March 22 and at latest on April 25.

Ascension Day can fall at earliest on April 30 and at latest on June 3.

Whit Sunday can fall at earliest on May 10 and at latest on June 13.

Rogation Sunday is the Sunday next before Holy Thursday (Ascension Day).

Trinity Sunday is the Sunday next after Holy Thursday.

Corpus Christi falls on the Thursday next after Trinity Sunday.

There are not less than xxii and not more than xxvii Sundays after Trinity.

Advent Sunday is the Sunday nearest to November 30.

PERPETUAL CALENDAR

OR TABLES FOR FINDING THE DAY OF THE WEEK FOR ANY DATE A.D.

(Copyright by A. F. L. Wilkinson)

TO USE THE CALENDAR:—Look up the Index Numbers corresponding to the Century, the Year (last two figures) and the Month, respectively, in the first three tables; add these three numbers together and add also the Day of the Month; in the fourth table, *opposite the sum obtained*, read the day of the Week.

NOTE.—In England the change from the Julian System or Old Style to the Gregorian System or New Style, was made in September, 1752, when the 11 days 3rd to 13th inclusive were omitted, and Wednesday Sept. 2 was immediately followed by Thursday Sept. 14. Other countries made the change at dates varying from 1582 to 1940. (See p. 185.)

If it is desired to look up a date after 1752 in Old Style, or before 1752 in New Style, it can be done by taking a date 700 years earlier in the first case or 400 years later in the second case; e.g. 1923 in Old Style is the same as 1223, and 1582 in New Style is the same as 1982.

exceptional importance from the time of the Nicene Council (A.D. 325) as the primate of Alexandria was charged at every Epiphany Feast with the announcement in a letter to the Churches of the date of the forthcoming Easter. The day was of considerable importance in Britain as it influenced dates, ecclesiastical and lay, e.g. *Plow Monday*, when work was resumed in the fields, falls upon the Monday in the first full week after the Epiphany.

Lent.—The Teutonic word *Lent*, which denotes the Fast preceding Easter, originally meant no more than the Spring season; but from Anglo-Saxon times, at least, it has been used as the equivalent of the more significant Latin term *Quadragesima*, meaning the "Forty Days" or, more literally, the fortieth day. As early as the fifth century some of the Fathers of the Church put forward the view that the forty days Fast is of Apostolic origin, but this is not supported or believed by modern scholars; and it appears to some that it dates from the early years of the fourth century. There is some suggestion that the Fast was kept originally for only forty hours. *Ash Wednesday* is the first day of Lent, which ends at midnight before Easter Day.

Sexagesima and Septuagesima.—It has been suggested that the unmeaning application of the names *Sexagesima* and *Septuagesima* to the second and third Sundays before Lent was made by analogy with the names *Quadragesima* and *Quinquagesima*. Another less likely conjecture is that *Septuagesima* means the seventieth day before the Octave of Easter. It is not certain whether the name *Quinquagesima* is due to the fact that the Sunday in question is the fiftieth day before Easter (reckoned inclusive) or was simply formed on the analogy of *Quadragesima* (*New English Dictionary*).

Palm Sunday commemorates the triumphal entry of Our Lord into Jerusalem and is celebrated in Britain (where palm is not available) by branches of willow gathered for use in the decoration of churches on that day.

Maundy Thursday, the day before Good Friday, the name itself being a corruption of *dies mandati* (day of the mandate) when Christ washed the feet of the disciples and gave them the mandate to love one another.

Easter-Day is the first Sunday after the full moon which happens upon, or next after, the 21st day of March; and if the full moon happens upon a Sunday, Easter-Day is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, which is known as the *Paschal Full Moon*.

A Fixed Easter.—As at present ordained, Easter falls on one of 35 days (March 22—April 25). On June 15, 1928, the House of Commons agreed to a motion for the third reading of the Bill that Easter-Day shall, in the Calendar year next but one after the commencement of the Act and in all subsequent years, be the first Sunday after the second Saturday in April. Easter would thus fall between April 9 and 15, both inclusive—that is, on the second or third Sunday in April. A clause in the

Bill provided that before it shall come into operation regard shall be had to any opinion expressed officially by the various Christian Churches. Although there has been some support, there is no present prospect of the adoption of a Fixed Easter.

Holy Days and Saints Days were the normal factors in early times for settling the dates of future and recurrent appointments, e.g. the *Quarter Days* in England and Wales are the Feast of the Nativity, the Feast of the Annunciation, the Feast of St. John the Baptist and the Feast of St. Michael and All the Holy Angels, while *Term Days* in Scotland are *Candlemas* (Feast of the Purification), *Whitsunday* (a fixed date), *Lammas* (Loaf Mass) and *Martinmas* (St. Martin's Day). *Law Sittings* in England and Wales commence on the Feast of St. Hilary and the term which begins on Old Michaelmas Day ends on the Feast of St. Thomas the Apostle.

The number of Saints commemorated in the Calendar of the Book of Common Prayer is 73, but (with the exception of All Saints' Day) "days" are appointed only for those whose names are mentioned in Scripture. *Red Letter Days* (see also p. 244) were Holy Days and Saints Days indicated in early ecclesiastical calendars by letters printed in red ink. The days to be distinguished in this way were finally approved at the Council of Nicaea, A.D. 325, and special services are set apart for them in the Book of Common Prayer.

Rogation Days.—These are the Monday, Tuesday and Wednesday preceding Ascension Day, "Holy Thursday", and in the fifth century were ordered by the Church to be observed as public Fasts with solemn processions and supplications. The processions were discontinued as religious observances at the Reformation, but survive in the ceremony known as "Beating the Parish Bounds."

Ember Days.—The Ember Days at the Four Seasons are the Wednesday, Friday and Saturday after (1) the First Sunday in Lent, (2) the Feast of Pentecost, (3) September 14, (4) December 13.

Whit Sunday.—It is generally said that this name is a variant of White Sunday, and was so called from the albs or white robes of the newly baptised. But other derivations have been suggested. An early writer says: "This day is called Wyte Sunday because the Holy Ghost brought Wyte and Wisdom unto Christ's disciples, and filled them full of ghostly wit."

Trinity Sunday.—The Festival in honour of the Trinity is observed on the Sunday following Whit Sunday, and subsequent Sundays are reckoned in the Church of England as "after Trinity"; in the Roman Catholic Church Sundays are reckoned "after Pentecost."

Thomas Becket, called by his contemporaries Thomas of London (born 1118; murdered Dec. 29, 1170), was consecrated Archbishop of Canterbury on the Sunday after Whit Sunday and his first act was to ordain that the day of his consecration should be held as a new festival in honour of the Holy Trinity. The observance thus originated spread from Canterbury throughout the whole of Christendom.

Advent Sunday is the Sunday nearest to St. Andrew's Day, Nov. 30, which allows three Sundays between Advent and Christmas Day in all cases. The Sunday preceding Advent is the 27th after Trinity if Easter falls on one of the days, March 22–26 inclusive. It is the 22nd after Trinity when Easter Day is on April 24 or 25. If the date of Easter were determined as proposed (see *Fixed Easter*), there would generally be 24 Sundays after Trinity, the number being 25 only in the years when Easter fell on April 9. As the rubric ordains that the Epistle and Gospel for the

25th Sunday after Trinity shall always be read upon the Sunday next before Advent, it follows that those offices appointed for the 24th Sunday would be little used. With a Fixed Easter there would never be a sixth Sunday after Epiphany. There would be a fifth Sunday when Easter Day fell on April 15 or on April 14, the year being a leap year.

Thistle Sunday (Scotland) is the first Sunday after St. Andrew's Day.

THE JEWISH CALENDAR

Origin.—The story in the Book of Genesis that the Flood began on the seventeenth day of the second month; that after the end of 150 days the waters were abated; and that on the seventeenth day of the seventh month the Ark rested on Mount Ararat, indicates a calendar of some kind and that the writers recognized 30 days as the length of a lunation. There is other mention of months by their ordinal numbers in the Book of Genesis and in establishing the rite of the Passover Moses spoke of *Abib* as the month when the Israelites came out from Egypt and *Abib* was to be the first month of the year. In the First Book of Kings three months are mentioned by name, Zif the second month, Ethanim the seventh and Bul the eighth, but these are not names now in use. After the Dispersion, Jewish communities were left in considerable doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used to-day, which, it is said by some, was done in A.D. 358 by Rabbi Hillel II., a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the tropical year as found by Hipparchus (Cir. 120 B.C.) which differ little from those adopted at the present day. The year 5714 (1953-54 A.D.) is the 14th year of the 30rst Metonic (Minor or Lunar

Cycle of 19 years and the 2nd year of the 205th Solar (or Major) Cycle of 28 years since the Era of the Creation, which the Jews hold to have occurred at the time of the Autumnal Equinox in the year known in the Christian Calendar as 3760 B.C. (954 of the Julian Period) and the epoch or starting point of Jewish Chronology corresponds to Oct. 7, 3761 B.C. At the beginning of each Solar Cycle the *Tekufah* of Nisan (the vernal equinox) returns to the same day and to the same hour.

The hour is divided into 1080 *minims* and the month between one new Moon and the next is reckoned as 29 days, 12 hours, 793 *minims*. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days, in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year (which commences on the first day of month Tishri), or as the penultimate month of the Ecclesiastical (which commences on the first day of month Iyar), the years when this happens being called Embolismic. Of the 19 years that form a Metonic cycle, 7 are embolismic; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of a day or two, for reasons depending on circumstances such as those to be immediately stated. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which therefore controls the dates of fasts and festivals in

JEWISH FASTS AND FESTIVALS

Tishri	1 Rosh Hoshanah (New Year).	Sivan 6 and 7 Shavuot (Pentecost or Feast of Weeks).
"	2 " " (2nd day).	
"	3 *Fast of Gedaliah.	Tammuz 17 *Fast of Tammuz.
"	10 Yom Kippur (Day of Atonement)	
"	15-21 Succoth (Feast of Tabernacles)-	Ab 9 *Fast of Ab.
"	21 Hoshana Rabba.	
"	22 Solemn Assembly	
"	23 Rejoicing of the Law.	
Kislev	25 Dedication of the Temple	
Tebet	10 Fast of Tebet.	
Adar	13 §Fast of Esther	
"	14 Purim.	
"	15 Shushan Purim.	
Nisan	15-22 Passover.	

A.M. 5714 (known as 714 in the short system) is an Embolismic Deficient year of 13 months, 55 Sabbaths and 383 days.

A.M. 5715 (715) is a Common Regular year of 12 months, 50 Sabbaths and 354 days.

A.M. 5716 (716) is a Common Abundant year of 12 months, 50 Sabbaths and 355 days.

NOTES.—* If these dates fall on the Sabbath the Fast is kept on the following day.

§ This fast is observed on Adar 11 (or Ve-Adar 11 in Embolismic years) if Adar 13 falls on a Sabbath.

the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types: Common Deficient (353 days), Common Regular (354 days), Common Abundant (355 days), Embolismic Deficient (383 days), Embolismic Regular (384 days), or Embolismic Abundant (385 days).

The Regular year has an alternation of 30 and 29 days. In an Abundant year, whether Common or Embolismic, Marcheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 29 instead of 30. The additional month in Embolismic years which is called Adar I., and precedes the month called Adar in Common years and Adar II., or Ve-Adar, in Embolismic, always has 30 days, but neither this, nor the other variations mentioned, is allowed to change the number of days in the other months which still follow the alternation of the normal twelve. In Embolismic years the month intercalated precedes Adar and usurps its name, but the usual Adar festivals are kept in Ve-Adar.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrin. Some minor but important points may be mentioned. (a) The time used is that of the meridian of Jerusalem, which is *2h. 21m.* in advance of Greenwich time; (b) the Jewish day begins at Sunset, which for computations of the Calendar is assumed to begin at 6 p.m. by time of Jerusalem; (c) in a month that follows one of 30 days, the day preceding its first day is also observed as the day of New Moon, the reason for this being somewhat obscure.

THE MOSLEM CALENDAR

The basic date of the Moslem Calendar is the *Hejira*, or Flight of Muhammad from Mecca to Medina, the corresponding date of which is A.D. 622, July 16, in the Gregorian Calendar. Hejira years are used principally in Persia, Turkey, Arabia, Egypt, in certain parts of India and in Malaya. The system was adopted about A.D. 632, commencing from the first day of the month preceding the Hejira. The years are purely lunar and consist of 12 months containing in alternate sequence 30 or 29 days, with the intercalation of one day at the end of the 12th month at stated intervals in each cycle of 30 years, the object of the intercalation being to reconcile the date of the first of the month with the date of the actual New Moon. Some adherents still take the date of the evening of the first visibility of the crescent as that of the first of the month. In each cycle of 30 years 19 are common and contain 354 days and 11 are intercalary (355 days), the latter being called *kabishah*.

The mean length of the Hejira year is 354 days, 8 hours, 48 minutes and the period of mean lunation is 29 days, 12 hours, 44 minutes.

To ascertain if a Hejira year is common or *kabishah* divide it by 30; the quotient gives the number of completed cycles and the remainder shows the place of the year in the current cycle.

If the remainder is 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 or 29 the year is *kabishah* and consists of 355 days.

Hejira year 1373, with remainder 23, is a common year and consists of 354 days. A.H. 1374 gives a quotient of 45 and a remainder of 24, thus making it *kabishah* (355 days). A.H. 1375 is a common year.

HEJIRA YEARS 1373 AND 1374

Name and Length of Month	A.H. 1373	A.H. 1374
Muharram (30)...	1953 Sept. 10	1954 Aug. 30
Saphar (29).....	Oct. 10	Sept. 29
Rabia I (30).....	Nov. 8	Oct. 28
Rabia II (29).....	Dec. 8	Nov. 27
Jomada I (30).....	1954 Jan. 6	Dec. 26
Jomada II (29)...	Feb. 5	1955 Jan. 25
Rajab (30).....	Mar. 6	Feb. 23
Shaaban (29).....	April 5	Mar. 25
Ramadan (30)....	May 4	April 23
Shawwal (29)....	June 3	May 23
Dulkaada (30)....	July 2	June 21
Dulheggia (29 or 30).....	Aug. 1	July 21

NOTE.—A.H. 1375 (common year of 354 days) begins on 1955, August 20.

OTHER EPOCHS AND CALENDARS

China.—Until the year A.D. 1911 a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled by the Academia Sinica at Nanking, but the old Lunar Calendar is still in use to some extent in China. The old Chinese Calendar, with a cycle of 60 years, is still in use in Tibet.

Ethiopia.—In the Coptic Calendar, which is used by part of the population of Egypt and Abyssinia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap-year, and in these years there are 6 complementary days. The Intercalary year of the Coptic Calendar immediately precedes the Leap-year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, Aug. 29 (Julian date).

Greece.—Ancient Greek chronology was reckoned in *Olympiads*, cycles of 4 years corresponding with the periodic Olympic Games held on the plain of Olympia in Elis once in 4 years, the intervening years being the first, second, etc., of the Olympiad which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.

India.—In addition to the Moslem reckoning there are six eras used in India. The principal astronomical system was the *Kaliyuga Era*, which appears to have been adopted in the fourth century A.D. It began on Feb. 18, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on Feb. 23, 57 B.C. The year A.D. 1954 is, therefore, the year 2011 of the Vikrama Era. In Southern India, the *Saka Era*, with its epoch of March 3, A.D. 78, was probably founded by Kanishka (whose sway was widely extended), and is in general use. The year A.D. 1954 is 1876 of the

Saka Era. In the Hills, the *Saptarshi* Era dates from the moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Iran.—The chronology of Iran (Persia) is the Era of Hejira, which began on A.D. 622, July 16. The *Zoroastrian Calendar* was used in pre-Moslem days and is still employed by Zoroastrians in Iran and India (Parsees) with era beginning A.D. 632, June 16.

Japan.—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by Western nations, the years, months and weeks being of the same length and beginning on the same days as those of the Western Calendar. The numeration of the years is different, for Japanese chronology is

based on a system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence, the method being not unlike the British system of Regnal years, but differing from it in the particular that each year of a period closes on Dec. 31. The Japanese scheme begins about A.D. 650 and the three latest epochs are defined by the reigns of Emperors whose actual names are not necessarily used:—

Epoch Meiji from 1868 Oct. 13 to 1912 July 31

.. Taishō .. 1912 Aug. 1 to 1925 Dec. 25

Shōwa .. 1926 Dec. 26

Hence the year Shōwa 29 begins 1954 Jan. 1. The months are not named. They are known as First Month, Second Month, etc., first month being the equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kayōbi (Fire-day), Suiryōbi (Water-day), Mokuyōbi (Wood-day), Kinyōbi (Metal-day), Doyōbi (Earth-day).

TEMPERATURE AND RAINFALL RECORDS

GENERAL: The maximum shade temperature of the air on record is 135° F. at Azizia (Uzzizia) in Tripoli on Sept. 13, 1922; the extreme lowest recorded temperature is -94° F. (126° below freezing point) at Vershoiansk, Siberia, on Jan. 3, 1885. In the upper air temperatures as low as -133° F. have been recorded—e.g. over Agra (India), at a height of 16½ kilometres (54,000 feet).

The wettest place in the world is generally allowed to be Cherrapunji in Assam, where different stations have given averages of 424 and 499 inches per year, of which 90 per cent. fell in the six months April to September.

U.K.: The maximum shade temperature recorded in the air at 4 feet above the ground is 100° F. at Greenwich Observatory (Aug. 9, 1911).

The lowest shade temperatures are -17° F. at Braemar (Feb. 21, 1895) and -16° F. at Kelso (Dec. 3, 1879).

The greatest rainfall recorded in a day was at Bruton, Somerset, 9.56 inches in the 24 hours commencing 9 a.m. (June 28, 1917). Annual

totals exceeding 240 inches were recorded at The Stye, Borrowdale, in 1872, 1923 and 1928; at Ben Nevis Observatory in 1898 and at Llyn Llydaw, Snowdon, in 1909. The smallest annual total is 9.29 inches at Margate in 1921.

The maximum wind-velocity on record occurred on the top of Costa Hill, Orkney, on January 31, 1953, in a gust of 125 miles per hour.

SUNSHINE RECORDS IN UNITED KINGDOM, 1952

Of the 320 stations reporting the number of hours of bright sunshine in the *Monthly Weather Reports* published by the Meteorological Office the following gave the largest values in 1952, the recorded sunshine being given in hours:—Shanklin 1992, Jersey 1979, Chichester 1926, Eastbourne 1919, Worthing 1917, Margate 1913, Sandown 1912, Ventnor 1908, Guernsey 1899. 1952 gave rather more than the average in most districts but was not as sunny as 1949. The largest values in hours for stations in 1952 in Scotland were recorded at Leuchars 1661 and Prestwick 1609.

Entries of Maximum Temperature cover day period 9-21 h.; Minimum Temperature night period 21-9 h. and are entered to day of reading; Rainfall the 24 hours commencing at 9 h. on day of entry; Sunshine the 24 hours 0-24 h.; Pressure and Wind are recorded at 9 h. Wind is recorded in degrees, E = 90°, S = 180°, W = 270° and N = 360°. Pressure is corrected and reduced to M.S.L. Rainfall 1000 mm. = 39.37 in. Averages refer to the following standard periods:—Temperature, Pressure and Sunshine 1921-1950; Rainfall, 1881-1915.

THE CORONATION SERVICE

The Duke of Edinburgh kneeling on the steps of the Throne to do homage to the Queen during the Coronation Service.

THE CORONATION PROCESSION

[The Times]

The Queen leaves Westminster Abbey to enter the state coach for the Procession back to Buckingham Palace.

CORONATION DAY

Crowds in the gaily-decorated Mall after the Coronation Procession had passed.

THE NAVAL REVIEW

Her Majesty reviewed the fleet at Spithead on June 15, 1953. This is the scene as H.M.S. *Surprise*, with the Queen on board, entered the review lines at Spithead. On the right is the aircraft-carrier *Eagle*, and on the left the French cruiser *Montcalm*. [The Times]

THE ROYAL AIR FORCE REVIEW

The Queen making her Coronation review of the Royal Air Force at Odiham, Hampshire, on July 15, when 320 aircraft were drawn up in four parallel lines. A fly-past of 641 planes took place later. [The Times]

HER LATE MAJESTY QUEEN MARY

Her Majesty Queen Mary died on March 24. Queen Mary is here seen at an exhibition of the Royal School of Needlework, in whose work she was greatly interested. [The Times

PRESIDENT EISENHOWER'S INAUGURATION

President Eisenhower and his predecessor, Mr. Truman, as they drive through the streets of Washington to the Capitol on January 20 for President Eisenhower's inauguration as twenty-third President of the United States.

THE CONQUEST OF MOUNT EVEREST

On May 29, the summit of Mount Everest was reached for the first time by Edmund Hillary (who later received a knighthood) and Sherpa Tensing. In this photograph, taken by Hillary from the top of Everest, the peaks below appear flat and monotonous.

THE EVEREST EXPEDITION

The members of the successful Everest Expedition on their arrival at London Airport. In the front row, from left to right, are: G. C. Band, Major C. G. Wylie, A. Gregory, E. P. (now Sir Edmund) Hillary, Sherpa Tensing, Colonel H. C. J. (now Sir John) Hunt, C. W. F. Noyce and M. H. Westmacott

[The Times

Foulness Church and Village, Essex, seen cut off by the disastrous floods which early in February devastated much of the East Coast of England.

J. H. Jones

THE LOSS OF THE "EMPRESS OF CANADA"

The Canadian-Pacific liner *Empress of Canada* caught fire in the Gladstone Dock, Liverpool, on Jan. 25. Later she fell on her side and became a total loss.

Joseph Stalin (*left*), the Russian leader, who died on March 5, and was succeeded as Chairman of the Council of Ministers of the U.S.S.R., by Georgi Malenkov (*right*).

FAMOUS MEN HONOURED

Among those honoured in the New Year or Coronation Honours Lists were Walter De La Mare (top left), who received the Order of Merit, Harold Nicolson, K.C.V.O. (top right) and (below) Marshal of the Royal Air Force Sir Arthur ("Bomber") Harris (Baronetcy), and Jack Hobbs (Knighthood).

MEMORIAL TO COMMONWEALTH AIRMEN

The memorial at Cooper's Hill, Runnymede, to members of the Commonwealth air forces who lost their lives in the last war while serving from bases in the United Kingdom and north-western Europe and have no known grave. It was designed by Edward Maufe, R.A., and unveiled by the Queen on October 17.

[The Times

ENGLAND REGAINS THE ASHES

Denis Compton making the winning hit in the Fifth Test Match at the Oval, when England, by defeating Australia after the first Four Test Matches had been drawn, won the "Ashes" for the first time since the winter of 1932-33.

Pinza, ridden by Gordon Richards, winning the 1953 Derby, with the Queen's Auricle second. Gordon Richards, champion jockey for many years, who received a knighthood in the Coronation Honours, had never before ridden the winner of the Derby. [The Times

The World

THE *Superficial Area* of the Earth is estimated to be 196,836,000 square miles, of which 55,786,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The *Equatorial Circumference* is 24,901.8 English miles, divided into 360 Degrees of Longitude, each of 69.17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901.8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365½ days). The Earth is distant from the Sun 93,000,000 miles, on the average.

AREA AND POPULATION.

The following estimate of the total population of the world by continents was published by the World Health Organization in June, 1951:—

Continent, &c.	Area in Square Miles	Estimated Population (1949)
Europe*.....	2,085,000	392,800,000
Asia*.....	10,348,000	1,253,500,000
U.S.S.R.....	8,337,000	†200,000,000
Africa.....	11,699,000	197,900,000
North, Central and South America and Islands.....	15,705,000	320,800,000
Oceania (including Australasia).....	3,201,000	12,400,000
World.....	51,375,000	2,377,400,000

* Exclusive of U.S.S.R. † 1900 estimate.

The British Dominions extend over the largest area (24,000,000 sq. miles); the U.S.S.R. is second (8,337,000 sq. miles); France (in 1939) was third, with 4,336,000 sq. miles; the United States, with its Insular Jurisdiction, &c., covers 3,750,000 sq. miles; Brazil 3,220,000 sq. miles and China 3,000,000 sq. miles.

WORLD POPULATION.

A. A. Berle, Assistant Secretary of State, U.S.A., stated at Durham, N. Carolina (Feb. 7, 1944), that the relative strength of the countries of the World would change most strikingly in the next 25 years. His predictions (in tabular form) are:

Country.	Pop. 1940.	Pop. 1965.
U.S.A.	135,000,000	155,000,000
U.K.	46,000,000	42,000,000
Germany	69,000,000	64,000,000
France	41,000,000	37,000,000
U.S.S.R.	172,000,000	222,000,000
Brazil	41,500,000	60,000,000

THE CONTINENTS.

Europe (including European Russia) forms about one-fourteenth of the land surface of the globe. Its length from the North Cape, 72° 12' N., to Cape Matapan, in the south of Greece, 36° 23' N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

The population of Europe has been estimated by Dr. R. R. Kuczynski at 100,000,000 in 1600; 152,500,000 in 1700; 173,000,000 in 1789; and at 525,000,000 in 1934.

Asia (including Asiatic Russia) extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuskin (78° 30' N.) and Cape Bulus (76 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lie in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

Africa is about three times the area of Europe. Its extreme longitudes are 17° W. at Cape Verde and 51° 27' 52" E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

North America, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52½° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of Central America, which have an area of about 200,000 square miles. The area of the West Indies is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

South America is a little more than 1½ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 12½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

Oceania extends over an area 1½ times the size of Europe, from Australia (in the West) to the most easterly islands of Polynesia, and from New Zealand (in the south) to the Sandwich Islands (Hawaii) in the north.

Area and Population of the World by Continents

The appended tables of area and population are based on such information as is immediately available.

With regard to areas it will be realized that no complete survey of many countries has yet been either achieved or even undertaken and that consequently accurate area figures are not available. In addition, among the results of the war of 1939-1945 is a readjustment of boundaries which have not yet been definitely settled.

The populations given hereunder are derived from various sources; some have as their basis an authenticated census; some are official and some are unofficial estimates. In certain cases later information is given in the Dominions, Colonies or Foreign Countries Sections of the ALMANACK. What has been said about the survey of many of the world's countries applies equally to the question of census.

The *League of Nations Handbook*, which contained a large amount of statistical material, ceased to appear soon after the outbreak of the war of 1939-1945 and has been replaced by the *Monthly Bulletin of Statistics* prepared by the Statistical Office of the United Nations with the assistance of the statistical offices of the various governments and of specialized agencies. The *Monthly Bulletin* is published at the headquarters of the United Nations at Great Neck (Lake Success Branch), New York, U.S.A.

ASIA

The expressions "The Near East," "The Middle East" and "The Far East" often appear in the Press of English-speaking countries, but have no definite boundaries. The following limits have been suggested:—*Near East* (Turkey to Persia) 25°–60° E. long., *Middle East* (Baluchistan to Burma) 60°–100° E. long., *Far East* (Siam to Japan) 100°–160° E. long.

Ψ Seaport.

= DISTANCE OF THE HORIZON

THE limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of 20 feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the Table.

At a height of	the range is	At a height of	the range is	At a height of	the range is
5 ft.	2.9 miles	500 ft.	29.5 miles	4,000 ft.	83.3 miles
20 „	5.9 „	1,000 „	41.6 „	5,000 „	93.1 „
50 „	9.3 „	2,000 „	58.9 „	20,000 „	186.2 „
100 „	13.2 „	3,000 „	72.1 „

THE SEVEN WONDERS OF THE WORLD

- I. THE PYRAMIDS OF EGYPT.**—From Gizeh (near Cairo) to a southern limit 60 miles distant. The oldest is that of Zoser, at Saggara, built about 3,000 B.C. The Great Pyramid of Cheops covers more than 12 acres and was originally 481 ft. in height and 756 x 756 ft. at the base.
- II. THE HANGING GARDENS OF BABYLON.**—Adjoining Nebuchadnezzar's palace, 60 miles south of Bagdad. Terraced gardens, ranging from 75 to 300 ft. above ground level, watered from storage tanks on the highest terrace.
- III. THE TOMB OF MAUSOLUS.**—At Halicarnassus, in Asia Minor. Built by the widowed Queen Artemisia about 350 B.C. The memorial originated the term mausoleum.
- IV. THE TEMPLE OF DIANA AT EPHESUS.**—A marble temple designed by Ctesiphon and erected by cities of Ionia in honour of the goddess about 480 B.C.
- V. THE COLOSSUS OF RHODES.**—A bronze statue of Apollo, set up about 280 B.C. with legs astride the harbour entrance at the seaport of Rhodes.
- VI. THE STATUE OF JUPITER OLYMPUS.**—At Olympia in the plain of Elis, constructed of marble inlaid with ivory and gold by the sculptor Phidias, about 430 B.C.
- VII. THE PHAROS OF ALEXANDRIA.**—A marble watch tower and lighthouse on the island of Pharos in the harbour of Alexandria. Originally isolated when constructed about 250 B.C., Alexander the Great, when founding the city of Alexandria, joined the island to the mainland by constructing a causeway.

PRINCIPAL LAND AREAS OF THE WORLD BELOW SEA LEVEL

(With approx. greatest depth in feet below Mean Sea Level.)

<i>Europe</i> : Netherlands coastal areas (15).
<i>Asia</i> : Jordan Valley, Dead Sea (1290).*
China: Sinkiang, Turfan Basin (980).
U.S.S.R.—Persia: Caspian Sea (85).*
Arabia: Trucial Oman-Qatar (70).
<i>Africa</i> : Libyan Desert Depressions:—
Qattara (440), Faiyum (150).
Wadi Rayan (140), Sittira (110).
Areg (80), Wadi Natrun (75).
Melfa (60), Siwa (55), Bahrain (50).
Eritrea: Salt Plains depression (385).
Algeria-Tunisia: Shott Melghir and El Gharsa (90).*
<i>America</i> : Death Valley (275), Salton Sea 245).*
<i>Australia</i> : Lake Eyre (40).

* Water surface.

PRINCIPAL HEIGHTS ABOVE SEA LEVEL

	Feet
<i>Europe</i> : Alps—Mont Blanc*.....	15,782
England: Scafell Pike.....	3,210
Wales: Snowdon.....	3,560
Scotland: Ben Nevis.....	4,406
Ireland: Carruntuohill.....	3,414
<i>Asia</i> : Everest.....	29,141
<i>Africa</i> : Kilimanjaro.....	19,340
<i>North America</i> : McKinley.....	20,300
<i>South America</i> : Aconcagua.....	22,976
<i>Australia</i> : Kosciusko.....	7,328
<i>New Zealand</i> : Cook.....	12,349
<i>Oceania</i> : Charles Louis.....	18,000

* The Caucasus being taken physically, if not politically, as in Asia.

THE LONGEST BRIDGES

(With length, in feet, of waterway.)

Lower Zambesi, Africa.....	11,322
Storstromsbroen, Denmark.....	10,499
Tay Bridge, Scotland.....	10,289
Upper Sone, India.....	9,839
Godavari, India.....	8,881
Forth Bridge, Scotland.....	8,291
Rio Salado, Argentina.....	6,703
Golden Gate, San Francisco, U.S.A.....	6,260
Rio Dulce, Argentina.....	5,866
Hardinge, India.....	5,384

PRESIDENTS OF THE FRENCH REPUBLIC

The Third Republic

Committee of Public Defence.....	4 Sept. 1870
Louis Adolphe Thiers.....	31 Aug. 1871
Marshal MacMahon.....	24 May, 1873
Jules Grévy.....	30 Jan. 1879
Sadi Carnot (assass.: 14 June, 1894).....	3 Dec. 1887
Jean Casimir Perier.....	27 June, 1894
François Félix Faure.....	17 Jan. 1895
Emile Loubet.....	18 Feb. 1899
Armand Fallières.....	18 Jan. 1906
Raymond Poincaré.....	17 Jan. 1913
Paul Deschanel.....	18 Feb. 1920
Alexandre Millerand.....	20 Sept. 1920
Gaston Doumergue.....	13 June, 1924
Paul Doumer (assass.: 7 May, 1932).....	13 June, 1931
Albert Lebrun (deposed 1940).....	10 May, 1932

The Fourth Republic

Maréchal Pétain, "Vichy" nominee, 11 July, 1940.

[General Charles de Gaulle, after stating that the French Government had capitulated before all means of resistance had been exhausted, announced the formation of a Provisional National Committee. After the liberation of Paris de Gaulle entered the capital and formed a provisional government on Sept. 10, 1944. This was regarded as a continuation of the *Third Republic*. De Gaulle was named provisional President. He resigned and was succeeded by Félix Gouin on Jan. 23, 1946. A new National Assembly was elected and on June 2, 1946, Gouin resigned and was succeeded by Georges Bidault. On Oct. 13, 1946, a new Constitution was adopted and on Jan. 16, 1947 Vincent Auriol was elected by the National Assembly and the Council of the Republic.]

Vincent Auriol, born 1884..... 16 Jan. 1947

WELSH SOVEREIGNS AND PRINCES

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llywelyn in 1282. The first English Prince of Wales was the son of Edward I, and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfilment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II, was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The title Prince of Wales is borne after individual conferment and is not inherited at birth. King Edward VIII was installed as Prince of Wales in Caernarvon Castle on July 13, 1911.

THE FAMILY OF KING GEORGE III

GEORGE III. was the eldest son of Frederick, Prince of Wales (eldest son of George II.), and of Princess Augusta (youngest daughter of Frederick II., Duke of Saxe-Gotha Altenburg). His Majesty was born at Norfolk House, St. James's Square, June 4, 1738 (May 24, Old Style); succeeded to the Throne Oct. 25, 1760; married Princess Charlotte (daughter of Charles, Duke of Mecklenburg-Strelitz); and was crowned with her on Sept. 22, 1761. The government was carried on, from Feb. 5, 1811, until the death of King George III., by his eldest son George, under the title of *Prince Regent*. King George III. died at Windsor, Jan. 29, 1820, his issue being:—

1. George Augustus Frederick, *Prince of Wales*, born Aug. 12, 1762, married his cousin Caroline, daughter of Charles, Duke of Brunswick-Wolfenbüttel, by whom he had a daughter, the Princess Charlotte of Wales (born Jan. 7, 1796; died in childbirth, Nov. 6, 1817, having married, May 2, 1816, Prince Leopold of Saxe-Coburg, afterwards King of the Belgians, uncle of the Prince Consort, the husband of Queen Victoria); succeeded to the throne as George IV., Jan. 29, 1820; died June 26, 1830.

2. Frederick, *Duke of York and Albany and Earl of Ulster*, born Aug. 16, 1763, married Frederica, daughter of Frederick William II. of Prussia. The Duke, who was for many years Commander-in-Chief of the Army, died, without issue, Jan. 5, 1827.

3. William, *Duke of Clarence and St. Andrew, and Earl of Munster*, born Aug. 21, 1765, married Adelaide, daughter of George, Duke of Saxe-Meiningen, by whom he had two daughters—Charlotte Augusta Louise (born and died Mar. 27, 1819), and Elizabeth Georgina Adelaide (born Dec. 20, 1820, died Mar. 4, 1821); succeeded to the throne as William IV., June 26, 1830; died June 20, 1837.

4. Charlotte, *Princess Royal*, born Sept. 29, 1766; married May 18, 1797, Frederick, Prince

(afterwards King) of Württemberg; died, without issue, Oct. 5, 1828.

5. Edward, *Duke of Kent and Strathearn and Earl of Dublin*, born Nov. 2, 1767; married Victoria, daughter of Francis, Duke of Saxe-Coburg, sister of Leopold I., King of the Belgians, and widow of Charles, Prince of Leiningen, by whom he had an only child, Her Majesty QUEEN VICTORIA. The Duke died Jan. 23, 1820.

6. Augusta, born Nov. 8, 1768; died, unmarried, Sept. 22, 1840.

7. Elizabeth, born May 22, 1770; married April 7, 1818, Frederick, Landgrave of Hesse-Homburg; died, without issue, Jan. 10, 1840.

8. Ernest, *Duke of Cumberland and Earl of Armagh*, born June 5, 1771; married May 29, 1815, Frederica, third daughter of Frederick V., Grand Duke of Mecklenburg-Strelitz, widow, 1st, of Prince Frederick of Prussia, and 2nd, of Frederick, Prince of Salm-Braunfels; became King of Hanover on death of William IV.; died Nov. 18, 1851, leaving issue, George, King of Hanover (1851-1866), born May 27, 1819; married Feb. 18, 1843, Alexandrina Mary, eldest daughter of the Duke of Saxe-Altenburg, by whom he had issue one son and two daughters; died June 12, 1878.

9. Augustus, Duke of Sussex, born Jan. 27, 1773; married Lady Augusta Murray, daughter of John, Earl of Dunmore, but this being contrary to the provisions of the Royal Marriage Act (12 Geo. III. c. 11), the union was pronounced invalid; died April 21, 1843.

Regiment, Royal Observer Corps, Royal Canadian Air Force Auxiliary, Honorary Air Commodore of 603 City of Edinburgh Squadron, R.A.F., with which is affiliated 2603 City of Edinburgh L.A.A. Squadron and 3603 City of Edinburgh Fighter Control Unit, Hon. Commissioner, Royal Canadian Mounted Police, Head of the Civil Defence Corps.

Elder daughter of His late Majesty King George VI and of Her Majesty Queen Elizabeth the Queen Mother; *born* at 17 Bruton Street, London, W.1, April 21, 1926, *succeeded* to the throne February 6, 1952, *crowned* June 2, 1953; *having married*, November 20, 1947, in Westminster Abbey, H.R.H. the Duke of Edinburgh, K.G., P.C., K.T., G.B.E., F.R.S., Admiral of the Fleet, Field Marshal, Marshal of the Royal Air Force, Captain-General of the Royal Marines, Colonel-in-Chief, 8th King's Royal Irish Hussars, Wiltshire Regiment (Duke of Edinburgh's), Queen's Own Cameron Highlanders, Colonel of the Welsh Guards, Hon. Colonel, Leicestershire Yeomanry, Edinburgh Univ. Contingent, University Training Corps, Admiral, Sea Cadet Corps, Royal Canadian Sea Cadets, Colonel-in-Chief, Army Cadet Force, Royal Canadian Army Cadets, Air Commodore-in-Chief Air Training Corps, Royal Canadian Air Cadets, Ranger of Windsor Park. *See* p. 236.

CHILDREN OF HER MAJESTY

H.R.H. PRINCE CHARLES PHILIP ARTHUR GEORGE, Duke of Cornwall and Duke of Rothesay, Earl of Carrick and Baron Renfrew, Lord of the Isles and Great Steward of Scotland, *born* at Buckingham Palace, November 14, 1948.

H.R.H. PRINCESS ANNE ELIZABETH ALICE LOUISE, *born* at Clarence House, August 15, 1950.

MOTHER OF HER MAJESTY

H.M. QUEEN ELIZABETH THE QUEEN MOTHER (Elizabeth Angela Marguerite) (daughter of the 14th Earl of Strathmore and Kinghorne), Lady of the Garter, Lady of the Thistle, Order of the Crown of India, Grand Master of the Royal Victorian Order, Dame Grand Cross of the Order of the British Empire, Royal Victorian Chain, Doctor of Civil Law, Doctor of Literature, Colonel-in-Chief the Bays, 7th Queen's Own Hussars, 9th Queen's Royal Lancers, Bedfordshire and Hertfordshire Regiment, Black Watch, K.O.Y.L.I., the Manchester Regiment, R.A.M.C., and the Royal Australian Army Medical Corps, Commandant-in-Chief W.R.A.C., Hon. Colonel London Scottish, Herts. Regt. (T.A.), City of London Yeomanry, Toronto Scottish Regt., and Black Watch (Royal Highland Regiment of Canada). *Born* Aug. 4, 1900, *married* April 26, 1923, Prince Albert Frederick Arthur George of Windsor, Duke of York, who *succeeded* to the throne as KING GEORGE VI, Dec. 11, 1936, and *died* February 6, 1952.

Residences.—Clarence House, St. James's, S.W.1.; Castle of Mey, Caithness, Scotland.

SISTER OF HER MAJESTY

H.R.H. PRINCESS MARGARET ROSE, G.C.V.O., C.I., Colonel-in-Chief, the 3rd The King's Own Hussars, the Suffolk Regiment, and the Women's Royal Australian Army Corps, Honorary Colonel Highland Light Infantry, Commandant-in-Chief, St. John Ambulance Brigade Cadets, Dame of Justice of the Order of St. John of Jerusalem, Commodore Sea Ranger Section of the Girl Guides Association; *born* at Glamis Castle, Angus, Scotland, Aug. 21, 1930.

ORDER OF SUCCESSION TO THE THRONE

The Queen's son and daughter are in the order of succession to the throne, and after the Princess Margaret, the Duke of Gloucester and his sons; then the Duke of Kent, his brother and his sister; then the Princess Royal, her elder son and his son, and her younger son and his son; then Princess Arthur of Connaught; then Lord Carnegie, son of the late Countess of Southesk; then Prince Olav of Norway and his children; then the children of the second daughter of the late Duke of Saxe-Coburg (his eldest daughter, the late Queen Marie of Roumania, having formally renounced on her marriage all possibility of claim to the British Throne); then the children of the third daughter (the late Princess Alexandra of Hohenlohe-Langenbourg); then the children of the eldest son of the late Princess Margaret of Connaught (Crown Princess of Sweden), her other sons and her daughter (Queen Ingrid of Denmark) and her children; then the younger daughter of the first Duke of Connaught and Strathearn (Lady Patricia Ramsay) and her son; then the Princess Alice (Countess of Athlone) and her daughter and grandchildren. Having thus exhausted the families of all Queen Victoria's sons we turn to her daughters, beginning with the house of the late Empress Frederick, but as this line is wholly out of practical bounds it would be profitless to pursue the investigation any further.

Precedence in Great Britain

The Sovereign.

The Duke of Edinburgh

The Duke of Cornwall.

The Duke of Gloucester.

The Duke of Windsor

Archbishop of Canterbury

Lord High Chancellor.

Archbishop of York.

The Prime Minister.

Lord President of the Council.

Speaker of the House of Commons.

Lord Privy Seal.

High Commissioners of Commonwealth Countries and Ambassadors of Foreign States.

Ambassadors and High Commissioners.

Five following Great Officers of State if Dukes.

(1) Lord Great Chamberlain (on duty); (2) Earl Marshal; (3) Lord Steward; (4) Lord Chamberlain; (5) The Master of the Horse.

Dukes, according to their Patents of Creation:

(1) Of England; (2) of Scotland; (3) of Great Britain; (4) of Ireland; (5) those created since the Union.

Ministers and Envoys.

Eldest sons of Dukes of Blood Royal.

Five above Great Officers of State if Marquesses.

Marquesses, in same order as Dukes.

Dukes' eldest Sons.

Five above Great Officers of State if Earls.

Earls, in same order as Dukes.

Younger sons of Dukes of Blood Royal.

Marquesses' eldest Sons.

Dukes' younger Sons.

Five above Great Officers of State if Viscounts.

Viscounts, in same order as Dukes.

Earls' eldest Sons.

Marquesses' younger Sons.

Bishops of London, Durham and Winchester.

All other English Bishops, according to their seniority of Consecration.

Five above Great Officers of State if Barons.

Secretaries of State, if of the degree of a Baron.

Barons, in same order as Dukes.

Treasurer of H.M.'s Household.

Comptroller of H.M.'s Household

Eldest Sons of younger Sons of Peers.

Baronets' eldest Sons.

Eldest Sons of Knights in the same order as their Fathers.

M.V.O. (5th) ; M.B.E.

Younger Sons of the younger Sons of Peers.

Baronets' younger Sons.

Younger Sons of Knights in the same order as their Fathers.

Naval, Military, Air, and other Esquires by Office.

WOMEN

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands; thus the daughter of a Duke marrying a Baron becomes of the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.

For Dames Grand Cross and Dames Commanders, *see* pp. 319-20.

LOCAL PRECEDENCE

ENGLAND AND WALES.—No written code of county or city order of precedence has been promulgated, but in Counties the Lord Lieutenant stands first, and secondly the Sheriff, and therefore in Cities and Boroughs the Lord Lieutenant has social precedence over the mayor; but at City or Borough functions the Lord Mayor or Mayor will preside. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

SCOTLAND.—*See* p. 68a.

The Queen's Household

Lord Chamberlain, The Earl of Scarbrough, K.G., P.C., G.C.S.I., G.C.L.E., G.C.V.O., T.D.

Ireland*; Dr. E. K. Macdonald, O.B.E., *Medical Officer of Health, Leicester*; Dr. R. J. Peters, *Deputy Chief Medical Officer, Department of Health for Scotland*.

ROYAL SALUTES

On the Anniversaries of the Birth, Accession and Coronation of the Sovereign a salute of 62 guns is fired on the wharf at the Tower of London.

On extraordinary and triumphal occasions, such as on the occasion of the Sovereign opening, proroguing or dissolving Parliament in Person, or when passing through London in procession, except when otherwise ordered, 41 guns only are fired.

On the occasion of the birth of a Royal infant a salute of 41 guns is fired from the two Saluting Stations in London, i.e. Hyde Park and the Tower of London.

THE MILITARY KNIGHTS OF WINDSOR

Founded in 1348 after the Wars in France to assist English Knights, who, having been prisoners in the hands of the French, had become impoverished by the payments of heavy ransoms. They received a pension and quarters in Windsor Castle. Edward III founded the Order of the Garter later in the same year, incorporating the Knights of Windsor and the College of St. George into its foundation and raising the number of Knights to 26 to correspond with the number of the Knights of the Garter. Known later as the Alms Knights or Poor Knights of Windsor, their establishment was reduced under the will of King Henry VIII to 13 and the Statutes by which they are still governed were drawn up by Queen Elizabeth I.

In 1833 King William IV changed their designation to The Military Knights and granted them their present uniform which consists of a scarlet coat with white cross sword-belt, crimson sash and cocked hat with plume. The badges are the Shield of St. George and the Star of the Order of the Garter. The Knights receive a small stipend in addition to their Army pensions and quarters in Windsor Castle. They take part in all ceremonies of the Noble Order of the Garter and attend Sunday morning service in St. George's Chapel as representatives of the Knights of the Garter.

Applications for appointment should be made to The Secretary, The War Office.

Governor, Maj.-Gen. Edmund Hakewill-Smith, C.B., C.B.E., M.C.

Military Knights, Lt.-Colonel J. F. Plunkett, D.S.O., M.C., D.C.M.; Lt.-Colonel R. Pennell, D.S.O.; Lt.-Colonel C. L. Hodgson; Major H. K. Clough, O.B.E.; Colonel A. H. W. Haywood, C.M.G., C.B.E., D.S.O.; Major E. H. Simpson, O.B.E., M.C.; Lt.-Colonel L. W. La T. Cockcraft, D.S.O., M.V.O.; Colonel J. A. Fraser, D.S.O., D.C.M.; Major D. J. Collas; Lt.-Colonel J. M. Mackenzie, D.S.O.; Colonel A. S. Turnham, C.B.E.; Lt.-Colonel L. Holbech, C.V.O., D.S.O., M.C.

Edward VIII.	Jan. 20, 1936	..
George VI.	Dec. 11, 1936	May 12, 1937
Elizabeth II.	Feb. 6, 1952	June 2, 1953

THE QUEEN'S BIRTHDAY, 1954

The date for the observance of the Queen's Birthday in 1954, both at home and abroad, will be Thursday, June 10. For the Customs and Excise Department, and the officers and servants of the dock companies in England and Northern Ireland, the day appointed for the observance will be Saturday, June 26.

ANNUITIES TO THE ROYAL FAMILY

The annuities payable to Her Majesty are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King George VI amounted to £410,000. A Select Committee appointed to consider the Civil List in May, 1952, made the following recommendations, which were embodied in the Civil List Consolidated Fund (Appropriation) Act, which received the Royal Assent on Aug. 1. The annual provision made for Her Majesty the Queen and other members of the Royal Family under the Acts of 1937 and 1952 is as follows:—

Her Majesty's Privy Purse	£60,000	Queen Elizabeth the Queen Mother ..	£70,000
Salaries of Household	185,000	The Duke of Edinburgh	40,000
Expenses of Household	121,800	The Duke of Gloucester	35,000
Royal Bounty, alms and special services	13,200	The Princess Margaret	6,000
Supplementary Provision	95,000	The Princess Royal	6,000
	<u>£475,000</u>		

These payments are separately charged on the Consolidated Fund, and do not form part of the Civil List.

THE UNION JACK

Days for hoisting the Union Flag on Government and Public Buildings (from 8 A.M. to sunset).

February 6 (1952).—Her Majesty's Accession.

March 31 (1900).—Birthday of Duke of Gloucester.

April 21 (1926).—Birthday of Her Majesty the Queen.

April 25 (1897).—Birthday of the Princess Royal.

May 24.—Empire Day.

June 2 (1953).—Coronation Day.

June 18 (1954).—Queen's "Official" Birthday (and (1921) Birthday of the Duke of Edinburgh).

Aug. 4 (1900).—Birthday of Her Majesty Queen Elizabeth the Queen Mother.

Aug. 15 (1950).—Birthday of the Princess Anne.

Aug. 21 (1930).—Birthday of the Princess Margaret.

Nov. 7.—Remembrance Day, 1954.

Nov. 14 (1948).—Birthday of the Duke of Cornwall.

Nov. 20 (1947).—Her Majesty's Wedding Day.

And on the occasion of the opening and closing of Parliament by the Queen, flags should be flown on public buildings in the Greater London area, whether or not Her Majesty performs the ceremony in person.

The only additions to the above list will be those notified to the Ministry of Works by Her Majesty's command and communicated by the Ministry to the other Departments. The list applies equally to Government and Public Buildings in London and elsewhere in the United Kingdom. In cases

where it has been the practice to fly the Union Jack daily, e.g. on some Custom Houses, that practice may continue.

Flags will be flown at half-mast on the following occasions:—

(a) From the announcement of the death up to the funeral of the Sovereign, except on Proclamation Day, when they are hoisted right up from 8 a.m. to sunset.

(b) The funerals of members of the Royal Family, subject to special commands from Her Majesty in each case.

(c) The funerals of Foreign Rulers, subject to special commands from Her Majesty in each case.

(d) The funerals of Prime Ministers and ex-Prime Ministers of Great Britain.

(e) Other occasions by special command of Her Majesty.

On occasions when days for flying flags coincide with days for flying flags at half mast the following rules will be observed. Flags will be flown:

(a) although a member of the Royal Family, or a near relative of the Royal Family, may be lying dead, unless special commands be received from Her Majesty to the contrary, and (b) although it may be the day of the funeral of a Foreign Ruler. If the body of a very distinguished subject is lying at a Government Office the flag may fly at half mast on that office until the body has left (provided it is a day on which the flag would fly) and then the flag is to be hoisted right up. On all other Public Buildings the flag will fly as usual.

The *Royal Standard* is only to be hoisted when the Queen is actually present in the building, and never when Her Majesty is passing in procession.

RED-LETTER DAYS

Scarlet Robes are worn by the Judges of the Queen's Bench Division on *Red-Letter Days* at the sittings of a Criminal Court or of the Court of Criminal Appeal and on all State Occasions.

RED-LETTER DAYS AND STATE OCCASIONS, 1954

" 9.	Lord Mayor's Day.
" 14.	Birthday of Duke of Cornwall.
" 30.	St. Andrew.
Dec. 21.	St. Thomas.

THE PEERAGE AND ITS DEGREES

The rules which govern the arrangements of the Peerage are marked by so many complications that even an expert may occasionally be perplexed. All Peers of England are Peers of Parliament. In Scotland and Ireland there are Peerages of equally long standing and upon the successive Unions of those two Kingdoms with the Kingdom of England a certain number of Scottish and Irish Peers received titles in the Peerage of Great Britain, or of the United Kingdom, carrying the right of summons to the House of Lords.

All Peers of Parliament up to June 20, 1707, are classed as Peers of England and rank before all others of like degree; from that date to December 31, 1800, all fresh creations either in England or in Scotland were called Peers of Great Britain, and creations from January 1, 1801, onwards, either in Great Britain or Ireland, are known as Peers of the United Kingdom, save only that the Sovereign retains the power to create one new Peer of Ireland for every three Irish Peerages of older date than the Union which have become extinct. In 1868 the Barony of Rathdonnell was so created and in 1898 that of Curzon of Kedleston, the latter being designed to permit the holder (who was Viceroy of India from 1898 to 1905) to return to the House of Commons instead of entering the House of Lords.

From the date of the Union with Scotland 16 Scottish Peers, not entitled to sit in the House of Lords by virtue of a British or United Kingdom Peerage, are elected as Representative Peers for the duration of each Parliament; and from the date of the Union with Ireland 28 Irish Peers were so elected for life; the number of the latter is now reduced to 5 and the 23 vacancies are unlikely to be filled.

No Peer of England, Scotland, Great Britain or of the United Kingdom can be elected a Member of the House of Commons, but an Irish Peer who holds no title carrying the right to sit in the House of Lords can be so elected for any constituency out of Ireland itself, but while he sits as a Member of the Commons he loses his privileges as a Peer. Viscount Palmerston, so long M.P. for Tiverton, was an eminent example, others being Lords Fermoy, Kensington, Muncaster, Dunsany, and the Earl of Cavan.

Fees for Dignities were payable as Inland Revenue until abolished by the Finance Act of 1937. They were in the form of revenue stamps, as follows: for a Dukedom £350; a Marquessate £300; an Earldom £250; a Viscounty £200; a Barony £150; a Baronetcy £100.

PEERAGES CREATED SINCE THE LAST ISSUE

PEERAGE (1)—Woolton. BARONS (6)—Baillieu; Bennett; Glyn; Grantchester; Percy of Newcastle; Rathcavan.

PEERAGES EXTINCT SINCE THE LAST ISSUE

BARONS (5)—Berwick (cr. 1784); Clarina (l. cr. 1800); McEntee (cr. 1951); Macmillan (Life Peerage) (cr. 1930); Robinson (cr. 1947).

PEERS WHO ARE MINORS

(As at Jan. 1, 1954)

ROYAL DUKES (2)—Cornwall (b. 1948); Kent (b. 1935).

MARQUESS (1)—Dufferin and Ava (b. 1938).

1829	Wynford (8th), Robert Samuel Best, b. 1917, s. 1943, m.	Hon. John P. R. B., b. 1950.

SCOTTISH LORDS OF COURT OF SESSION

The word "Lord" prefixed to the names of Judges of the Court of Session, or to titles different from their names, is strictly an official honour and may be compared with the terms "Hon. Mr. Justice" and "Lord Chief Justice" in England, which replaced the titles "Baron" and "Lord Chief Baron." An Order in Council of February, 1905, authorized the retention of this Scottish honour for life, irrespective of retirement, and the style "Lady" is to be enjoyed by the wife and to continue in widowhood, though not after remarriage; but no distinction is conferred upon children. Lord in this case takes the prefix "Hon." in place of "Rt. Hon." of actual Lords, unless the Judges are also Privy Counsellors, in which case "Rt. Hon." is correct (see p. 274). There are 14 Lords of Session. The official (or Bench) title is ordinarily used, except in the cases of the Lord Justice General and Lord Justice Clerk, who take precedence in Scotland before Viscounts; the others immediately after Privy Counsellors. The Chairman of the Scottish Land Court has the same rank and tenure as if he had been appointed a Judge of the Court of Session.

LORDS OF SESSION

1945	Birnam, Sir (Thomas) David King Murray, b. 1884.
1947	Blades, Daniel Patterson Blades, b. 1888, m.

1947	Thomson, George Reid Thomson, P.C., Lord Justice Clerk, b. 1893, m.

CHAIRMAN OF THE SCOTTISH LAND COURT

1941	Gibson, Robert Gibson, b. 1886, m.
------	------------------------------------

LIFE PEERS

This class, once not infrequent, is now restricted to a very small number of *Law Lords*, at present nine. The first recent creation occurred in 1856 in the case of Lord Wensleydale, when the Peers decided that a Life Temporal Peer was not entitled to a seat in their House. An Act was accordingly passed giving power to the Sovereign to elevate two Judges of Appeal into Life Barons of Parliament and in 1876 the number was enlarged, so that the House now admits all the Lords of Appeal in Ordinary, whether active or retired. The wives of these Peers take the title of "Lady" with precedence as Baronesses and children of these Life Peers rank next after those of hereditary Barons and take the courtesy title of "Honourable."

Peereesses in Their Own Right

Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. A resolution to admit Peereesses in their Own Right to the House of Lords was defeated in that house in 1930, but when submitted on July 27, 1949, was carried by a substantial majority. A Peereess in her Own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband but the rank of a Peereess in her Own Right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

DUCHESS IN HER OWN RIGHT.

<i>Created.</i>	<i>Title, Order of Succession, Name, etc.</i>	<i>Eldest Son or Heir.</i>
1900	Fife (2nd), Alexandra (H.R.H. Princess Arthur of Connaught), b. 1891, s. 1912, w. (see p. 235).	Lord Carnegie, b. 1929.

COUNTESSSES IN THEIR OWN RIGHT.—*Style, The Countess of —.* *Addressed as, My Lady.*

<i>Created.</i>	<i>Title, Name, etc.</i>	<i>Eldest Son or Heir.</i>
1861	Cromartie, Sibell Lilian Blunt-Mackenzie, b. 1878, s. 1895, w.	Viscount Tarbat, M.C., b. 1904.
1643 S.	Dysart, Wenefryde Agatha Greaves, b. 1889, s. 1935, w.	Lady Rosamund G., b. 1914.
1453 S.	Erroll, Diana Denyse Moncrieffe (<i>Hereditary Lord High Constable and Knight Marischal of Scotland</i>), b. 1926, s. 1941, m.	Lord Hay, b. 1948.

THE TITLE OF ESQUIRE

The title of Esquire is accorded for legal or ceremonial purposes to the following: (a) all sons of peers during their fathers' lives, and the younger sons of such peers after their fathers' deaths; the eldest sons of peers' younger sons, and their eldest sons for ever. (b) Noblemen of all other nations. (c) Companions and Commanders of the various Orders of Knighthood. (d) The eldest sons of baronets and knights. (e) Persons entitled to bear arms and to the title of esquire by letters patent. (f) Barristers at law. (g) Justices of the peace and mayors, while in commission or office. (h) Lieutenants and Deputy Lieutenants of Counties of Cities. (i) Holders of a superior office under the Crown.

Courtesy Titles (in actual use in 1954)

Holders of Courtesy Titles are addressed in the manner shown for holders of substantive titles

From this list it will be seen that the "Marquess of Blandford" is the heir to the Dukedom of Marlborough and the "Earl of Aboyne" to the Marquessate of Huntly, and "Viscount Acheson" heir to the Earldom of Gosford; *the titles of second heirs are also given; e.g., "Lord Paisley" elder son of the "Marquess of Hamilton" heir to the Dukedom of Abercorn; Viscount Savernake, eldest son of the "Earl of Cardigan" heir to the Marquessate of Ailesbury; and Viscount Nevill, son of the "Earl of Lewes" heir to the Marquessate of Abergavenny.

.. In addition to these Titles of Courtesy the eldest son of Scottish Viscounts and Barons is usually styled "The Master of —" e.g., "The Master of Falkland," eldest son of Viscount Falkland; "The Master of Erskine," eldest son of Lord Erskine and grandson of the Earl of Mar and Kellie.

CONTRACTIONS AND SYMBOLS

Contractions and Symbols.—S. or I. appended to the date of creation denotes a Scottish or Irish title, the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as Engl., Brit., or U.K. When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. R. indicates that the Peer is a representative peer for Scotland or Ireland. The mark * signifies that there is no "of" in the Marquessate or Earldom so designated; b. signifies born; s., succeeded; m., married; w., widower or widow; M., minor.

Her Majesty's Most Honourable Privy Council

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 895, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the chief advisers of the King who were permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given below. Members of the Cabinet must be Privy Councillors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, *e.g.*, the Judicial Committee, the Board of Trade, *q.v.* The Lord President of the Council is one of the Great Officers of State, and as such is always a prominent member of the Cabinet.

Clerk of the Council, W. G. Agnew.

Deputy Clerk of the Council, E. N. Landale.

THE PREFIX RIGHT HONOURABLE

"Right Honourable."—By long established custom, or courtesy, members of Her Majesty's Most Honourable Privy Council are entitled to be designated "The Right Honourable," but, in practice, this prefix is sometimes absorbed in other designations; for example, a Prince of the Blood admitted a Privy Councillor remains "His Royal Highness"; a Duke remains "His Grace"; a Marquess is still styled "Most Honourable." The style of all other Peers, whether Privy Councillors or not, is "Right Honourable," although it is more usual to describe them with the prefix "The", omitting the more elaborate styles. A Privy Councillor who is not a Peer should be addressed as The Rt. Hon. —. A Peer below the rank of Marquess who is a Privy Councillor should be addressed as The Rt. Hon. the Lord (or Earl or Viscount) —, P.C., or, less elaborately, The Lord (or Earl or Viscount) —, P.C.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges.

Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force and (1942) Mercantile Marine. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.

Restricted to members of the administrative or clerical (clerk) branches of the Civil Service and consists of the Sovereign and Companions (not exclusively male) to a number not exceeding 740, of whom 360 may belong to the Home Services, 180 to the services of Dominions and 200 to the services of the Colonies and Protectorates.

OTHER PRINCIPAL DECORATIONS AND MEDALS (in order of Precedence).

Victoria Cross.—1856.— See pp. 321-4.George Cross.—1940.— See pp. 325-6.

British Orders of Knighthood.

O.M.M.

THE ORDER OF MERIT (1902)—O.M. Ribbon, Blue and Crimson.

This Order is designed as a special distinction for eminent men and women—without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is denoted by the suffix O.M., which follows the first class of the Order of the Bath and precedes the letters designating membership of the inferior classes of the Bath and all classes of the lesser Orders of Knighthood.

O.M.Civ.

Professor George Macaulay Trevelyan, 1930.

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no conferments have been made since the death of Queen Victoria. Badge, in the first three Classes a medallion of Queen Victoria and the Prince Consort, differing in the width and jewelling of the border as the Classes descend, whilst the fourth substitutes a jewelled cipher. All four are surmounted by a crown, which is attached to a bow of white moiré ribbon. The honour does not confer any rank or title upon the recipient.

FIRST CLASS.

Princess Wilhelmina of the Netherlands.

SECOND CLASS.

Queen Elizabeth of the Hellenes.
H.H. the Princess Marie Louise.
H.R.H. the Princess Alice,
Countess of Athlone.

H.R.H. the Princess Alfonso d'Orleans-Bourbon.

FOURTH CLASS.

Hon. Mrs. John Haughton.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted January 1, 1878. Badge, the royal cipher in jewels within an oval, surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. The honour does not confer any rank or title upon the recipient. No conferments have been made since 1948.

H.M. THE QUEEN, 1947.	Margaret, Dowager Baroness Amptill, 1899.	Doreen Maud, Marchioness of Linlithgow, 1935.
H.M. Queen Elizabeth the Queen Mother, 1931.	Lady Victoria Patricia Helena Ramsay, 1911.	Doreen Geraldine, Dowager Baroness Brabourne, 1937.
H.R.H. the Princess Margaret, 1947.	Margaret Etienne Hannah, Marchioness of Crewe, 1911.	Eugenie Marie, Countess Wavell, 1943.
H.R.H. the Princess Royal, 1919.	Frances Charlotte, Viscountess Chelmsford, 1916.	Florence Amery, 1945.
H.R.H. the Duchess of Gloucester, 1937.	Marie Adelaide, Marchioness of Willingdon, 1917.	H.H. Maharani Tara Devi of Jammu and Kashmir, 1946.
H.R.H. the Duchess of Kent, 1937.	Dorothy Evelyn Augusta, Countess of Halifax, 1926.	Edwina Cynthia Annette, Countess Mountbatten of Burma, 1947.
H.H. the Princess Marie Louise, 1893.	Pamela, Countess of Lytton, 1927.	Agnes Anne, Baroness Clydes-muir, 1948.
H.H. Maharani Sahib Chimna Bai Gaekwar of Baroda, 1892.	H.H. Maharani Regent of Travancore, 1929.	

Baronets, Knights Grand Cross, Knights Grand Commanders, Knights Commanders and Knights Bachelor

Badge of Baronets
of England, Great Britain, U.K.,
(and Ireland marked D).

Badge of Baronets
of Scotland or Nova Scotia
(marked S).

NOTES CONCERNING BARONETS

Clause II. of the Royal Warrant of February 8, 1910, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall be received as a Baronet, or shall be addressed or mentioned by that title in any Civil or Military Commission, Letters Patent or other official document." When an obelisk (†) precedes a name it indicates that, at the time of going to press, the Baronet concerned has not been registered on the Official Roll of the Baronetage. The date of creation of the Baronetcy is given in parenthesis ().

Baronets are addressed as "Sir" (with Christian name) and in writing as "Sir Robert A—, Bt." Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady A—," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A—"; if daughter of a Viscount or Baron "The Hon. Lady A—."

Certain Baronetcies have been created with remainder to "heirs male and of tailzie," or in special remainder, and are thus heritable through (although they do not devolve on) females. In the first class are Dalryell of the Binns (N.S. 1685), Dunbar of Baldoon (Scot. 1664), Dunbar of Hempriggs (Scot. 1706) and Stirling Maxwell of Pollok (Scot. 1707); in the second class are Hicking of Brockenhurst (U.K. 1920) and Lucas Tooth of Bught (U.K. 1920). It is noteworthy that in 1947 the special remainder in the patent of Hicking took effect and the present Baronet is Sir William North.

In addition to the Baronets noted in the list below, 256 Peers (9 Dukes, 13 Marquesses, 49 Earls, 37 Viscounts and 148 Barons) are also Baronets; and it may well happen that though there is no heir to a Peerage, a collateral may inherit the Baronetcy of his ancestor. Thus, on the extinction of the Holden Barony in 1951, a kinsman of the last Baron succeeded to the Baronetcy of Holden of Alston.

NOTES CONCERNING KNIGHTS GRAND CROSS, ETC.

Knights Grand Cross, Knights Grand Commanders and Knights Commanders are addressed in the same manner as Baronets (*q.v.*), but in writing the appropriate initials (G.C.B., K.C.B., &c.) are appended to surname in place of "Bt." Knights Bachelor are addressed as "Sir —" (first or Christian name) and in writing as "Sir A— B—." The wife of a Knight Grand Cross, Knight Grand Commander, Knight Commander or Knight Bachelor is addressed as stated for the wife of a Baronet.

NOTES CONCERNING KNIGHTS BACHELOR

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary Association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown above. The Officers of the Society are:—*Knight Principal*, Sir Gerald Wollaston, K.C.B., K.C.V.O.; *Hon. Registrar*, Major Sir Thomas Lumley-Smith, D.S.O.; *Clerk*, Miss E. Blackwell; *Registry and Library*, 21 Old Buildings, Lincoln's Inn, W.C.2.

BARONETAGE AND KNIGHTAGE

(Revised to Aug. 21, 1953)

Peers are not included in this list

A full entry in italic type indicates that the recipient of a Knighthood died during the year in which the honour was conferred. The name is included for purposes of record.

Duff of Hatton (U.K. 1952); Gregory (U.K. 1931); Jaffrey (U.K. 1931); Thomson of Monken Hadley (U.K. 1938).

BARONETAGES CREATED

Bossom; Boyce; Harris of Chepping Wycombe; McEwen; Mills of Alcester; Pooley; Price of Ardingly; Spears; Williams of Cilgerrant.

Dames Grand Cross and Dames Commanders of the Royal Victorian Order and of the Order of the British Empire

NOTE.—Dames Grand Cross (G.C.V.O. or G.B.E.) and Dames Commanders (D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, e.g. "Miss Florence Smith," after receiving the honour would be addressed as "Dame Florence," and in writing, as "Dame Florence Smith, G/ (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, e.g. "The Countess of —, G.C.V.O." Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

DAMES GRAND CROSS AND DAMES COMMANDERS

	Trubshaw, Dame Gwendoline Joyce, D.B.E.	

THE GRAND PRIORY IN THE BRITISH REALM OF THE VENERABLE ORDER OF THE HOSPITAL OF ST. JOHN OF JERUSALEM

(INCORPORATED MAY 14, 1888, WITH ADDENDA 1888, 1890, 1907 and 1926)

St. John's Gate, Clerkenwell, London, E.C.1.

Sovereign Head H.M. Queen Elizabeth II.

Grand Prior H.R.H. The Duke of Gloucester,
K.G., P.C., K.T., K.P., G.M.B., G.C.M.G.
G.C.V.O.

Lord Prior The Lord Wakehurst, K.C.M.G.

The Order had its origin in Jerusalem and Acre as an international lay confraternity for the relief of crusaders, and was later sovereign in Rhodes and in Malta, where its Knights kept galleys and galleons, to attack the Barbary Corsairs and to prevent the spread of Turkish rule in the Mediterranean, from 1530 till 1798. Like other ancient Orders of Chivalry, the Order of St. John had also Priories and Commanderies in the different countries of Europe, those in England and Scotland being dissolved at the same time as the monasteries. The Order was expelled from Malta by Napoleon in 1798, after which the Grand Magistrature eventually settled in Rome, with various Priories and associations elsewhere in Europe.

In 1827 the Knights of France, with the authority of the Grand Magistrature, assisted in the reconstruction of what is now the Grand Priory in the British Realm of the Venerable Order of the Hospital of St. John of Jerusalem, whose Chancery is at the Gatehouse which still remains in Clerkenwell as part of the ancient Priory of England. A Royal Charter was granted to this British Order in 1888 by Queen Victoria, and the first Grand Prior was King Edward VII, while Prince of Wales. The Badge is a Maltese Cross of white enamel, with a lion and unicorn in alternate angles, of gold or silver according to grade, with a black watered ribbon; a medal is conferred for acts of gallantry involving risk of life. By a Royal Charter of June 12, 1926, members are divided into five classes:—(1) Bailiffs and Dames Grand Cross; (2) Knights and Dames of Justice and of Grace; (3) Commanders; (4) Officers; and (5) Serving Brothers and Sisters. The Chaplains of the Order form a special class, taking precedence between the Knights and Commanders. A notification of these distinctions having been conferred appears in the London Gazette, but they do not confer any rank, style, title or precedence.

Separate Priories have been formed for Scotland and Wales, and overseas for South Africa, New Zealand, Canada and Australia, and also Commanderies for Western Australia, Northern Ireland and Central Africa (Southern and Northern Rhodesia).

The work of the Order consists of the maintenance of its three Foundations—The Ophthalmic Hospital in Jerusalem (founded 1882); The St. John Ambulance Association, which is responsible for the education of the public in First Aid and kindred subjects and which since its inception in 1877 has issued over six million First Aid Certificates, with more than 226,000 during the year 1951; and the St. John Ambulance Brigade, which consists of a quarter of a million active volunteer members who carry out practical first aid duties both at home and in territories overseas.

Prelate—His Grace the Archbishop of Canterbury.
Chancellor—Lieut.-Gen. Sir Henry Pownall, K.C.B.,
K.B.E., D.S.O., M.C.

Secretary-General—Charles Tunstall Evans, C.M.G.
Director-General of the St. John Ambulance Association, Horace F. Parshall, T.D.

Receiver-General—Sir Ernest Burdon, K.C.L.E.,
C.S.I., LL.D., F.S.A.

Hospitaller—Col. The Lord Webb-Johnson, K.C.V.O.,
C.B.E., D.S.O., T.D.

Almoner—Major Robert Lindsay Loyd, O.B.E., M.C.
Genealogist—The Hon. Sir George Bellew, K.C.V.O.

Director of Ceremonies—C. H. C. Pirie-Gordon,
O.B.E., D.S.C., F.S.A.

Commissioner-in-Chief, St. John Ambulance Brigade—
Lieut.-General Sir Otto Marling Lund, K.C.B.,
D.S.O.

Librarian—Major Richard Williams, F.S.A.

Registrar—Sir Harry Luke, K.C.M.G.

THE VICTORIA CROSS, *VC*

The ribbon is *Crimson* for all Services (until 1928 it was *Blue* for Royal Navy).

FOR CONSPICUOUS BRAVERY. INSTITUTED *January 29th, 1856.*

The *VC* is worn before all other decorations, on the left breast, and consists in a cross-pattee of bronze, $1\frac{1}{2}$ inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." From the institution of the decoration in January 1856 until March 1942 Victoria Crosses were, by Queen Victoria's decree, struck from the metal of guns captured by the British at Sevastopol during the Crimean war; the supply of Sevastopol metal having run out the crosses are now made from gunmetal supplied by the Royal Mint. In all three fighting Services, holders of the *VC* below commissioned rank (or below warrant rank in the Royal Navy) receive an annuity of £10 a year concurrently with the award, plus an addition of 6d. a day (£9 2s. 6d. a year) to the recipient's pension. In the case of a posthumous award, £50 is credited to the estate of a recipient, or the balance of £50 if that amount has not been paid during his lifetime; an additional annuity of £5 is paid for each bar, such bar being added for additional acts of bravery which would have entitled the recipient to the Victoria Cross if he or she had not already received it. In the event of an annuitant being unable to obtain a livelihood on leaving the Service, the amount of the annuity may be increased to £75. In 1911, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Crown.

THE GEORGE CROSS, &C

The ribbon is *dark blue* threaded through a bar adorned with laurel leaves

FOR GALLANTRY

INSTITUTED *September 24th, 1940* (with amendments, *November 3rd, 1942*).

The &C is worn before all other decorations (except the VC) on the left breast & consists of a plain silver cross with four equal limbs, the cross having in the centre a circular medallion bearing a design showing St. George and the Dragon. The inscription "For Gallantry" appears round the medallion and in the angle of each limb of the cross is the Royal cypher "G VI" forming a circle concentric with the medallion. The reverse is plain and bears the name of the recipient and the date of the award. The cross is suspended by a ring from a bar adorned with laurel leaves on dark blue ribbon $1\frac{1}{2}$ inches wide.

The cross is intended primarily for civilians and awards to the fighting services are confined to actions for which purely military honours are not normally granted. It is awarded only for acts of the greatest heroism or of the most conspicuous courage in circumstances of extreme danger.

§ When worn by a woman it may be worn on the left shoulder from a ribbon of the same width and colour fashioned into a bow.

NOTE ON EMPIRE GALLANTRY MEDAL

The Royal Warrant which ordained that the grant of the Empire Gallantry Medal should cease, authorized holders of that medal to return it to the Central Chancery of the Order of Knighthood and to receive in exchange the George Cross. A similar provision applied to posthumous awards of the medal of the Order of the British Empire for Gallantry made after the outbreak of war in 1939. In the list below the date of award of the Empire Gallantry Medal and of its exchange for the George Cross is noted.

SURVIVING RECIPIENTS OF THE GEORGE CROSS

THE ISLAND OF MALTA, 1942

- Minister of Food*, Major The Rt. Hon. Gwilym Lloyd George, M.P., born Dec. 4, 1894.
- Minister of Agriculture and Fisheries*, Major The Rt. Hon. Sir Thomas Lionel Dugdale, Bt., T.D., M.P., born July 20, 1897.
- Minister of Education*, The Rt. Hon. Florence Horsbrugh, C.B.E., M.P.

The above form the Cabinet

MINISTERS OF CABINET RANK

- First Lord of the Admiralty*, The Rt. Hon. James Purdon Lewes Thomas, M.P., born Oct. 13, 1903.
- Secretary of State for War*, The Rt. Hon. Antony Henry Head, C.B.E., M.C., M.P., born 1906.
- Secretary of State for Air*, The Rt. Hon. Lord De L'Isle and Dudley, *VC*, born May 23, 1909.
- Minister of Supply*, The Rt. Hon. Duncan Sandys, M.P., born Jan. 24, 1908.
- Minister of Transport and of Civil Aviation*, The Rt. Hon. Alan Tindal Lennox-Boyd, M.P., born 1904.
- Minister of State (Foreign Affairs)*, The Rt. Hon. John Selwyn Brooke Lloyd, Q.C., M.P., born July 28, 1904.
- Minister of State (Colonial Affairs)*, The Rt. Hon. Henry Lennox D'Aubigné Hopkinson, C.M.G., M.P., born Jan. 3, 1902.
- Minister of State (Scottish Office)*, The Rt. Hon. the Earl of Home, born July 2, 1903.
- Minister of State (Board of Trade)*, The Rt. Hon. Derick Heathcoat-Amory, born Dec. 22, 1899.
- Minister of Works*, The Rt. Hon. Sir David McAdam Eccles, K.C.V.O., M.P., born Sept. 18, 1904.
- Minister of Pensions and National Insurance*, The Rt. Hon. Osbert Peake, M.P., born Dec. 30, 1897.
- Minister of Fuel and Power*, The Rt. Hon. Geoffrey William Lloyd, M.P., born Jan. 17, 1902.
- Postmaster-General*, The Rt. Hon. Earl De La Warr, born June 20, 1900.
- Minister of Health*, The Rt. Hon. Iain Norman Macleod, M.P., born Nov. 11, 1913.

PARLIAMENTARY UNDER SECRETARIES AND OTHER MINISTERS

- Attorney-General*, Sir Lionel Frederick Heald, Q.C., M.P.
- Solicitor-General*, Sir Reginald Manningham-Buller, Q.C., M.P.
- Lord Advocate*, Rt. Hon. J. L. M. Clyde, Q.C., M.P.
- Solicitor-General for Scotland*, W. R. Milligan, Q.C.
- Admiralty (Parliamentary and Financial Sec.)*, Cmdr. A. H. P. Noble, D.S.O., D.S.C., M.P.; (Civil Lord) K. S. D. W. Digby, M.P.
- Agriculture and Fisheries (Joint)*, Lord Carrington M.C.; G. R. H. Nugent, M.P.
- Air*, Hon. G. R. Ward, M.P.
- Civil Aviation*, J. D. Profumo, O.B.E., M.P.
- Colonies*, The Earl of Munster.
- Commonwealth Relations*, J. G. Foster, Q.C., M.P.
- Defence*, E. N. C. Birch, O.B.E., M.P.
- Education*, K. W. M. Pickthorn, LITT.D., M.P.
- Food*, Dr. C. Hill, M.P.
- Foreign*, The Marquess of Reading, C.B.E., M.C., T.D., Q.C.; H. A. Nutting, M.P.
- Fuel and Power*, Hon. L. W. Joynson-Hicks, M.P.
- Health*, Miss M. P. Hornsby-Smith, M.P.
- Housing and Local Govt.*, A. E. Marples, M.P.
- Home (Joint)*, The Lord Lloyd, M.B.E.; Sir Hugh Lucas-Tooth, Bt., M.P.
- Labour and Nat. Service*, H. A. Watkinson, M.P.
- Pensions and National Insurance*, R. H. Turton, M.C., M.P.; Brig. J. G. Smyth, *VC*, M.C., M.P.
- Post Office (Asst. P.M. G.)*, L. D. Gammons, M.P.
- Scottish Office (Joint)*, Cmdr. Rt. Hon. T. D. Galbraith, M.P.; W. McNair Snadden, M.P.; J. Henderson Stewart, M.P.
- Supply*, A. R. W. Low, C.B.E., D.S.O., M.P.
- Trade*, H. G. Strauss, Q.C., M.P.
- Transport*, Lt.-Cdr. J. G. Braithwaite, M.P.
- Treasury*, Rt. Hon. P. G. T. Buchan-Hepburn, M.P. [M.P.]
- (do.) *Financial Secretary*, J. A. Boyd-Carpenter.
- (do.) *Economic Secretary*, R. Maudling, M.P.
- Junior Lords*, E. R. G. Heath, M.B.E., M.P.; T. G. D. Galbraith, M.P.; D. F. Vosper, T.D., M.P.; H. D. Oakshott, M.B.E., M.P.; M. Redmayne, D.S.O., M.P.
- War Office*, J. R. H. Hutchison, D.S.O., T.D., M.P.
- Works*, A. H. E. Molson, M.P.

Leader of the Opposition, The Rt. Hon. Clement Richard Attlee, O.M., C.H., M.P., born Jan. 3, 1883.

PRIME MINISTERS.—Sir Robert Walpole, First Lord of the Treasury and Chancellor of the Exchequer from 1721 to 1742, rose to a power no Minister had ever before attained and was the subject of a protest entered in the Journal of the House of Lords, the grievance being that the Sovereign should repose confidence in any one Minister to the exclusion of the remainder. He is usually regarded as the first Prime Minister and the eminence he achieved was repeated in the reign of George III, when the illness of the Sovereign necessitated the appearance of a leading and presiding minister, the Prince Regent not taking the Sovereign's place in this respect. After the Regency the Sovereign ceased to preside at Cabinet Meetings and the leading Minister became, in fact, Prime Minister.

The British Constitution

THE EXECUTIVE

The Crown (the Queen in Council) "makes peace and war, issues charters, increases the peerage, is the fountain of honour, of office, and of justice." The Sovereign entrusts the executive power to Ministers of the Crown, appointed on the advice of the accredited leader of the party in Parliament which enjoys, or can secure, a majority of votes in the House of Commons.

The Cabinet

The Cabinet has no corporate existence, but under the *Ministers of the Crown Act* (1937), provision is made for 17 Ministers of the first rank (Cabinet Ministers) of whom not more than 15 may be members of the House of Commons, and for 23 *Parliamentary Secretaries* of whom not more than 21 may be members of the House of Commons and not fewer than 2 of the Lords.

The Prime Minister

The Prime Minister is appointed by the Sovereign. When a party is in opposition and its leadership becomes vacant it makes its free choice among the various personalities available; but if the party is in office, the Sovereign's choice may anticipate, and in a certain sense forestall, the decision of the party. In 1905 the office of Prime Minister, which had been in existence for nearly 200 years, was officially recognized and its holder was granted a place in the Table of Precedence.

The Leader of the Opposition

In 1937 the office of Leader of the Opposition was similarly recognized and a salary of £2,000 per annum was assigned to the post, thus following a practice which had prevailed in the Dominion of Canada since 1906.

THE PRINCIPAL PARTIES IN PARLIAMENT (1900-1951)

General Election	Conservative and Unionist	Liberal	Labour
1900.....	402	185	11

LEGISLATION

Legislation is initiated in the Houses of Parliament in the form of Bills. Public Bills are of two kinds, those introduced by the Government of the day, and those introduced by a private member. A Bill (except a Money Bill, which must originate in the House of Commons) can be introduced in either House and when presented receives its *First Reading*, after which it is printed and circulated to members. The next stage is the *Second Reading*, in the debate on which the broad issues raised are discussed. If passed it reaches the *Committee Stage* and is referred to a Committee (of the whole House, Select, or Standing—see "Committees," p. 336). Bills of major importance are usually, and Money Bills are always, sent to a Committee of the whole House. In committee, a Bill is discussed clause by clause, and is returned to the House with or without amendment. A Private Bill, which is introduced to enable an individual or a body corporate to acquire or vary certain powers, is referred to a *Select Committee*, and if opposed, witnesses may be called and counsel heard by the Committee. The next step is the *Report Stage*, when the Bill is accepted by the House, or sent back to the same, or sent back to another, Committee for further consideration. Finally the Bill receives its *Third Reading* (during which, in the House of Commons, only verbal amendments are permissible) and is sent to the other House. When a Bill has been passed by both Houses it becomes an *Act of Parliament*, on receiving the *Royal Assent*, which is signified by the Sovereign on the Throne, or by Commissioners (normally three Peers), in the Chamber of the House of Lords. The power to withhold assent (colloquially known as the *Royal Veto*) resides in the Sovereign, but has not been exercised in the United Kingdom since 1707, in the reign of Queen Anne.

COUNCILLORS OF STATE

On every occasion that the Sovereign leaves the realm for distant parts of the Commonwealth or a foreign country, it is necessary to appoint Counsellors of State under Letters Patent to carry out the chief functions of the monarch, including the holding of Privy Councils and the signature of Acts passed by Parliament. The normal procedure is to appoint as Counsellors three or four members of the Royal Family who are next in succession to the Throne among those remaining in the United Kingdom. For instance when King George VI toured South Africa with the Queen, Princess Elizabeth (now Queen Elizabeth II) and Princess Margaret, in 1947, the Counsellors of State were the Duke of Gloucester (who flew home specially from Australia to be available), the Princess Royal, and her son, Viscount Lascelles (now Earl of Harewood).

The procedure for carrying out the essential duties of the monarch while he or she is out of the country or incapacitated by serious illness were laid down in the Regency Act. During the serious illness of King George V in 1928 under the provisions of this Act, the Queen, the Prince of Wales (afterwards Edward VIII), the Duke of York (afterwards George VI), the Archbishop of Canterbury, the Lord Chancellor (Viscount Hailsham), and the Prime Minister (Mr. Baldwin) were appointed Counsellors of State.

NOTES.—(a) Including 48 Non-Coalition Unionists. (b) Including 28 Non-Coalition Liberals. (c) Including 63 Non-Coalition Labour. (d) Liberal National 59; Liberal 59. (h) National Labour 8; Labour 154; I.L.P. 4. (i) Liberal National 13;

GOVERNMENT BY PARTY

Towards the close of Charles II's reign the Exclusion Bill debates in Parliament (1679-80) were marked by the rise of two parties in the political life of the nation and they became known as *Whigs* and *Tories*, names given by the opponents to each other but afterwards mutually accepted, to continue as political labels until Whig was changed to *Liberal* and Tory to *Conservative*.

The Oxford English Dictionary explains the terms as follows:—

Whig [origin obscure; probably shortening of *Whiggamore*].—An adherent of the Presbyterian cause in Scotland in the seventeenth century. Applied to the Exclusionists who opposed the succession of James, Duke of York, to the crown, on the ground of his being a Roman Catholic.

Tory [Anglicized spelling of Irish *toiraidhe* "pursuer"] . . . applied to any Irish Papist or Royalist in arms. A nickname given 1679-80 by the Exclusionists to those who opposed the exclusion of James, Duke of York (a Roman Catholic), from the succession to the crown.

Before the reign of William and Mary (1688-1702) the principal Officers of State were chosen by and were responsible to the Sovereign alone and not to Parliament or the nation at large. Such officers acted sometimes in concert with one another, but more often independently, and the fall of one did not, of necessity, involve that of others, although all were liable to be dismissed at any moment.

In 1693 the Earl of Sunderland recommended to William III the advisability of selecting a Ministry from the political party which enjoyed a majority in the House of Commons and the first united Ministry was drawn in 1696 from the Whigs, to which party the King owed his throne, the principal members being Russell (the Admiral), Somers (the Advocate), Lord Wharton and Charles Montague (afterwards Chancellor of the Exchequer). This group became known as the *Junto* and was regarded with suspicion as a novelty in the political life of the nation, being a small section meeting in secret apart from the main body of Ministers. It may be regarded as the forerunner of the *Cabinet* and in course of time it led to the establishment of the principle of joint responsibility of Ministers, so that internal disagreement caused a change of personnel or resignation of the whole body of Ministers.

The *Act of Settlement* (1701) secured the Protestant succession to the throne and with the accession of George I (1714) the main cause of the political division was removed, leaving the Whigs as the dominant party for many years, the Tories being regarded as Jacobites in permanent opposition to the Hanoverians; but before the close of George II's reign (1760) they had become reconciled to the dynasty and during the French wars they secured an ascendancy in Parliament.

The accession of a King unfamiliar with the English language led to a disinclination on the part of the Sovereign to preside at meetings of his Ministers and caused the appearance of a *Prime Minister*, a position first acquired by Robert Walpole in 1721 and retained without interruption for 20 years and 326 days, a period which has been surpassed only by the Rt. Hon. W. L. Mackenzie King, Prime Minister of the Dominion of Canada, 1921-30 and from 1935 to 1948.

In 1828 the old party of the Whigs became known as *Liberals*, a name originally given to it by its opponents to imply laxity of principles, but gradually accepted by the party to indicate its claim to be pioneers and champions of political

reform and progressive legislation. In 1861 a Liberal Registration Association was founded and Liberal Associations became widespread. As the outcome of a conference at Birmingham in 1877 a National Liberal Federation was formed, with headquarters in London. The Liberal Party was in power for long periods during the second half of the nineteenth century in spite of the set-back during the Home Rule crisis of 1886, which resulted in the secession of the Liberal Unionists, and for several years during the first quarter of the twentieth century, but after a further split into National and Independent Liberals it numbered only 59 in all after the General Election of 1929, with a further fall to 12 (excluding National Liberals) after the 1945 Election, 9 after the 1950 Election and 6 after the 1951 Election.

Soon after the change from Whig to Liberal the Tory Party became known as *Conservative*, a name traditionally believed to have been invented by John Wilson Croker in 1830 and to have been generally adopted about the time of the passing of the Reform Act of 1832 to indicate that the preservation of national institutions was the leading principle of the party. After the Home Rule crisis of 1886 the dissentient Liberals entered into a compact with the Conservatives, under which the latter undertook not to contest their seats, but a separate *Liberal Unionist* organization was maintained until 1912, when it was united with the Conservatives under the title of National Unionist Association of Conservative and Liberal Unionist Organizations, the members of which became known as *Unionists*.

The Labour Party.—Labour Candidates for Parliament made their first appearance at the General Election of 1892, when there were 27 standing as "Labour" or "Liberal-Labour." Of this number John Burns (Battersea) and J. Keir Hardie (West Ham) were elected "Labour" Members of Parliament and 13 others as "Liberal-Labour" members. At the General Election of 1895 the number of successful candidates fell to 12, with a further fall to 11 at the election of 1900.

On Feb. 27, 1900, as a result of a resolution passed by the Trades Union Congress in the previous September, a Conference of Trade Union and Socialist bodies was held in the Memorial Hall, Farringdon Street, London, and an organization called the *Labour Representative Committee* was set up in order to establish a distinct Labour Group in Parliament, with its own whips, its own policy, and a readiness to co-operate with any party which may be engaged in promoting legislation in the direct interest of labour. In 1906 the L.R.C. became known as *The Labour Party*.

Irish Parties.—After the legislative union of Great Britain and Ireland (Jan. 1, 1801) 107 Irish members were added to the House of Commons, a number reduced to 105 in 1870 when the boroughs of Cashel and Sligo were disfranchised. In 1870 a *Home Rule Party* was formed under the leadership of Isaac Butt and the Irish members were divided into Roman Catholic Home Rulers, mainly in the South of Ireland, and Protestant Unionists, mainly in the Province of Ulster, the Home Rulers being in the majority and supporting the Liberal Party on account of their hostility to the veto power of the House of Lords, which appeared to prevent the passage of a Home Rule Bill. The General Election of 1885 returned 82 Nationalists and that figure was maintained with little variation until the establishment of the Irish Free State in 1921, the party having split in 1890 into *Parnellites* and *Anti-Parnellites*. From 1900 to 1921 the Nationalist Party advocated not only Home Rule but political

independence of Great Britain, and under the leadership of Arthur Griffith, a *Sinn Féin* (Our-selves Alone) Movement was eventually successful in negotiating the Anglo-Irish Treaty of 1921.

Parliamentary Whips

In order to secure the attendance of Members of a particular party in Parliament on all occasions, and particularly on the occasion of an important division, *Whips* (originally known as "Whippers-in") are appointed for the purpose. The written appeal or circular letter issued by them is also known as a "whip," its urgency being denoted by the number of times it is underlined. Neglect to respond to a five-lined whip, headed "Most Important," is tantamount to secession (at any rate temporarily) from the party.

Whips are officially recognized by Parliament and are provided with office accommodation in both Houses. Government Whips receive salaries from public funds, the Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip in the Commons*) receiving £3,000; the Captain of the Gentlemen-at-Arms (*Chief Whip in the Lords*), the Captain of the Yeomen of the Guard (*Assistant do.*) and the first of the Junior Lords of the Treasury (*Deputy Chief Whip in the Commons*), each £1,200; the (Political) Lords in Waiting and the remaining Junior Lords of the Treasury, each £1,000.

The House of Lords

The *Government Whips* are: The Captain of the Honourable Corps of the Gentlemen at Arms (The Earl Fortescue), the Captain of the King's Bodyguard of the Yeoman of the Guard (The Earl of Onslow) and the (Political) Lords in Waiting (The Earls of Birkenhead and Selkirk and Lord Muncroft).

The *Labour Whips* are: The Lord Shepherd (*Chief Whip*); The Earl of Lucan; The Lords Burden, Kersnaw and Haden-Guest.

The *Liberal Whip* is: The Lord Rea.

The House of Commons

The *Government Whips* are: The Parliamentary (Patronage) Secretary to the Treasury (*Chief Whip*) and the Junior Lords of the Treasury. *Assistant Whips* (who are unpaid) are also usually appointed.

The *Labour Whips* are: Rt. Hon. W. Whiteley (*Chief Whip*); H. W. Bowden; I. Taylor; A. Pearson; C. Royle; H. E. Holmes; E. Popplewell; K. Robinson; W. A. Wilkins; A. C. Allen; G. E. C. Wigg.

The *Liberal National Whip* is Sir Herbert Walter Butcher.

The *Liberal Whip* is Major J. Grimond.

THE HOUSES OF PARLIAMENT

Parliament originated in the demand of the King's Great Council, consisting of prelates, earls and barons, that there should be discussion about the affairs of state, and in 1242 the word "parliament" was first used in an official document to describe such an assembly. In 1265 Simon de Montfort in the king's name summoned to a parliament not only the great men but also for the first time two representatives elected by each county, city and town, and by the end of the reign of Edward I it had become usual to summon the Commons.

The House of Lords is the ultimate Court of Appeal for all Courts in Great Britain and Northern Ireland. The Lords surrendered the ancient right of peers to be tried for treason or felony by their peers in 1948. Each House has the right to control its own internal proceedings and to commit for contempt.

The Commons claim exclusive control in respect of national taxation and expenditure and in respect of local rates and charges upon them. The Finance Bill, which imposes taxation, and Consolidated Fund Bills, which authorise expenditure, must begin in the Commons and may not be amended by the Lords in any respect whatever. A bill of which the financial provisions are subsidiary may begin in the Lords; and the Commons may waive their rights in regards to Lords amendments affecting finance.

Normally a bill must be agreed to by both Houses before it receives the Royal Assent, but under the Parliament Acts, 1911 and 1948—(a) a bill which the Speaker has certified as a Money Bill, i.e. as concerned solely with national taxation, expenditure or borrowing, if not agreed to by the Lords within one month of its being sent to them, receives the Royal Assent and becomes law without their concurrence; (b) any other public bill (except one to extend the life of a Parliament), which has been passed by the Commons in two successive sessions and twice rejected by the Lords, receives the Royal Assent and becomes law, provided that one year has elapsed between its Second Reading in the first session and its Third Reading in the second session in the Commons.

The Parliament Act of 1911 also limited the duration of Parliament, if not previously dissolved, to 5 years. The term is reckoned from the date given on the writs for the new Parliament. During the War of 1914-18 the duration of Parliament was extended by successive Acts from 5 to 8 years, but a General Election was held before the end of the term finally prescribed and the Parliament which first met on Jan. 31, 1911, was dissolved on Nov. 25, 1918, fourteen days after the Armistice. At the outbreak of war in 1939 a similar course was followed and Parliament which first met on Nov. 26, 1935, was not dissolved until June 15, 1945.

Parliament is dissolved (as it is summoned) by the Sovereign, and until the passing of the Representation of the People Act (1867), Parliament was dissolved by the Demise of the Crown, but in that Act provision was made for its continuance to the normal duration, unless previously dissolved.

The longest recorded sitting of the House of Commons is 41 hours 30 minutes (from 4 p.m., Jan. 31 to 9.30 a.m. Feb. 2, 1881), that of the House of Lords is 11 hrs. 57 minutes (from 4.15 p.m. to 4.12 a.m. Nov. 1934).

Since 1803 reports of the proceedings of Parliament in open session have been published. From 1803-1888 these were known as *Hansard's Parliamentary Debates*, and in 1943 the word "Hansard" was restored to the title page. Copies are obtainable from H.M. Stationery Office and periodical issues are on sale throughout the country.

Payment of Members.—Members of the House of Lords are unpaid but (since 1946) are entitled, if they attend regularly, to travelling expenses from home address to the Palace of Westminster.

Since 1911 members of the House of Commons have received salaries and travelling facilities over the railways, the payment of £400 being increased in 1937 to £600, and in 1946 to £1,000 per annum. Members of Parliament contribute at the rate of £12 per annum towards a Fund to provide pensions or grants to ex-members, their widows and orphans whose incomes are below certain limits: income from investments in 1951/52 was £2,050 and expenditure in grants £6,580. The Capital Account (1952) stood at £73,603.

THE HOUSE OF LORDS

The House of Lords consists of some 850 Lords Spiritual and Temporal. The Lords Spiritual are the two Archbishops, the Bishops of London, Durham and Winchester, and the 21 senior English Bishops. The Lords Temporal are either peers by descent of England, Great Britain or the United Kingdom, or peers of new creation, or "Law Lords" (who are life peers), or Irish Representative Peers (28 elected for life until 1922; now 23 vacancies), or Scottish Representative Peers (16 elected for duration of Parliament). About half the peerages of the Lords Temporal have been created since 1920. An Irish Peer not in the House of Lords is eligible for election as a Member of the House of Commons for an English, Welsh or Scottish Constituency.

THE HOUSE OF COMMONS

The House of Commons.—By the Representation of the People Act (1885) membership was increased from 658 (at which it had stood since 1801 through the Act of Union with Ireland) to 670, and by a similar Act (1918) it was increased to 707. By the Government of Ireland Act (1920) and the Irish Free

State Agreement Act (1922) membership was decreased to 615, Irish representation being reduced from 105 to 13 members. By the Representation of the People Act of 1945 25 new Constituencies were created, making the total 640; and by a similar Act of 1948 the total membership is now 625.

THE PALACE OF WESTMINSTER

An ordinance issued in the reign of Richard II stated that "Parliament shall be holden or kept wheresoever it pleaseth the King" and at the present day the Sovereign summons parliament to meet and prescribes the time and place of meeting. The royal palace at Westminster, built according to legend by Edward the Confessor, and enlarged by William the Conqueror (Westminster Hall being added by William Rufus) was the normal place of Parliament from about 1340. St. Stephen's chapel (originally built for King Stephen) was used from 1547 for the meetings of the House of Commons, which had previously been held in the Chapter House or Refectory of Westminster Abbey. The House of Lords met in an apartment of the royal palace.

The disastrous fire of 1834 destroyed the whole palace, except Westminster Hall, and the present Houses of Parliament were erected on the site from the designs of Sir Charles Barry and Augustus Pugin, between the years 1840 and 1867, at a cost of £2,198,000.

The Victoria Tower of the House of Lords is 336 feet high and when Parliament is sitting the Union Jack flies from sunrise to sunset from its flag-staff. The clock tower of the House of Commons is 320 feet high and contains "Big Ben," the 15½-ton bell named after Sir Benjamin Hall, First Commissioner of Works when it was hung in 1856. The dials of the clock are 2½ feet in diameter, the hands being 11 feet (hour) and 14 feet (minute) in length. The chimes and strike of "Big Ben" have achieved world-wide fame from broadcasting.

A light is displayed in the clock tower from sundown to sunrise during the hours the House is in session.

The Chamber of the House of Commons was destroyed by enemy action in 1941 and the foundation stone of a new building, from the designs of Sir Giles Gilbert Scott, was laid by the Speaker on May 26, 1948. The new Chamber was used for the first time on Oct. 26, 1950.

THE LORD CHANCELLOR

The Lord High Chancellor of England is (although not addressed as such) the Speaker of the House of Lords. Unlike the Speaker of the House of Commons, he takes part in debates and votes in divisions. He sits on one of the *Woolsacks*, couches covered with red cloth and stuffed with wool. If the Lord Chancellor wishes to address the House in any way except formally as Speaker, he leaves the *Woolsack* and steps towards his proper place as a peer, below the Royal Dukes.

PRIME MINISTER'S RESIDENCE

Number 10, Downing Street, S.W.1, is the official town residence of the Prime Minister. No. 11 of the Chancellor of the Exchequer and No. 12 is the office of the Government Whips. The street was named after Sir George Downing, Bt., soldier and diplomatist, who was M.P. for Morpeth from 1660 to 1684.

Chequers, a Tudor mansion in the Chilterns, about 3 miles from Princes Risborough, was presented together with a maintenance endowment by Lord and Lady Lee of Fareham in 1917 to serve, from Jan. 1, 1921, as a country residence for the Prime Minister of the day, the *Chequers* estate of 700 acres being added to the gift by Lord Lee in 1921. The mansion contains a famous collection of Cromwellian portraits and relics.

PRIME MINISTERS

Sir Robert Walpole, *Whig*, April 3, 1721.
Earl of Wilmington, *Whig*, Feb. 26, 1743.

Henry Pelham, *Whig*, Aug. 25, 1743.
Duke of Newcastle, *Whig*, May 18, 1754.
Duke of Devonshire, *Whig*, Nov. 16, 1756.—
Duke of Newcastle, *Whig*, July 2, 1757.
Earl of Bute, *Tory*, May 28, 1762.
George Grenville, *Whig*, April 15, 1763.
Marquess of Rockingham, *Whig*, July 10, 1765.
Duke of Grafton, *Whig*, Aug. 2, 1766.
Lord North, *Tory*, Feb. 6, 1770.
Marquess of Rockingham, *Whig*, March 27, 1782.
Earl of Shelburne, *Whig*, July 13, 1782.
Duke of Portland, *Coalition*, April 4, 1783.
William Pitt, *Tory*, Dec. 7, 1783.
Henry Addington, *Tory*, March 21, 1801.
William Pitt, *Tory*, May 16, 1804.
Lord Grenville, *Whig*, Feb. 10, 1806.
Duke of Portland, *Tory*, March 31, 1807.
Spencer Perceval, *Tory*, Dec. 6, 1809.
Earl of Liverpool, *Tory*, June 16, 1812.
George Canning, *Tory*, April 30, 1827.
Viscount Goderich, *Tory*, Sept. 8, 1827.
Duke of Wellington, *Tory*, Jan. 26, 1828.
Earl Grey, *Whig*, Nov. 24, 1830.
Viscount Melbourne, *Whig*, July 18, 1834.
Sir Robert Peel, *Tory*, Dec. 26, 1834.
Viscount Melbourne, *Whig*, March 14, 1835.
Sir Robert Peel, *Tory*, Sept. 6, 1841.
Lord John Russell, *Whig*, July 6, 1846.
Earl of Derby, *Tory*, Feb. 28, 1852.
Earl of Aberdeen, *Peelite*, Dec. 28, 1852.
Viscount Palmerston, *Liberal*, Feb. 10, 1855.
Earl of Derby, *Conservative*, Feb. 25, 1858.
Viscount Palmerston, *Liberal*, June 18, 1859.
Earl Russell, *Liberal*, Nov. 6, 1865.
Earl of Derby, *Conservative*, July 6, 1866.
Benjamin Disraeli, *Conservative*, Feb. 27, 1868.
W. E. Gladstone, *Liberal*, Dec. 9, 1868.
Benjamin Disraeli, *Conservative*, Feb. 21, 1874.
W. E. Gladstone, *Liberal*, April 28, 1880.
Marquess of Salisbury, *Conservative*, June 24, 1885.
W. E. Gladstone, *Liberal*, Feb. 6, 1886.
Marquess of Salisbury, *Conservative*, Aug. 3, 1886.
W. E. Gladstone, *Liberal*, Aug. 28, 1892.
Earl of Rosebery, *Liberal*, March 3, 1894.
Marquess of Salisbury, *Conservative*, July 2, 1895.
A. J. Balfour, *Conservative*, July 12, 1902.
Sir H. Campbell-Bannerman, *Liberal*, Dec. 5, 1905.
H. H. Asquith, *Liberal*, April 8, 1908.
H. H. Asquith, *Coalition*, May 26, 1915.
D. Lloyd George, *Coalition*, Dec. 7, 1916.
A. Bonar Law, *Conservative*, Oct. 23, 1921.
S. Baldwin, *Conservative*, May 22, 1923.
J. R. MacDonald, *Labour*, Jan. 22, 1924.
S. Baldwin, *Conservative*, Nov. 4, 1924.
J. R. MacDonald, *Labour*, June 8, 1929.
J. R. MacDonald, *Coalition*, Aug. 25, 1931.
S. Baldwin, *Coalition*, June 7, 1935.
S. Baldwin, *Coalition*, Nov. 22, 1935.
N. Chamberlain, *Coalition*, May 28, 1937.
N. Chamberlain, *Coalition*, Sept. 3, 1939.
W. S. Churchill, *Coalition*, May 11, 1940.
W. S. Churchill, *Coalition*, May 23, 1945.
C. R. Attlee, *Labour*, July 26, 1945.
C. R. Attlee, *Labour*, March 1, 1950.
Sir W. S. Churchill, *Conservative*, Oct. 26, 1951.

Of the 41 Prime Ministers 18 sat in the House of Lords and 22 in the House of Commons during their term of office. One, Lord John Russell (afterwards Earl Russell) sat, in his first Ministry in the House of Commons, and in his second in the House of Lords. Benjamin Disraeli was raised to the peerage as Earl of Beaconsfield during his second term of office.

Lord Palmerston, as an Irish peer, and Lord North, as the holder of a courtesy title, both sat in the House of Commons.

NOTES ON PARLIAMENTARY PROCEDURE

WRITS FOR A NEW PARLIAMENT, ETC.—Writs for a new Parliament are issued, on the Sovereign's warrant, by the Lord Chancellor to Peers individually, but in the case of the Commons to the returning officers of the various constituencies. A Writ of Summons to the House of Lords, before the time when baronies were created by Letters Patent, is held (should the writ be good and the Parliament legally summoned) to create a barony for the recipient and his heirs. The oldest English peerages, the baronies of De Ros and Mowbray, are founded on writs of summons issued in 1264 and 1283 respectively. The right to sit in the House of Lords is determined by the House. Recent decisions of the House refused a writ to Viscountess Rhonda (on the ground of her sex) in 1922 and granted one to the second Lord Sinha in 1939, eleven years after his father's death in 1928. A newly-created Peer may not sit or speak in the House of Lords until he has been introduced by two sponsors of his own degree in the Peerage.

VACANT SEATS.—When a vacancy occurs in the House of Commons the Writ for a New Election is generally moved, during a session of Parliament, by the Chief Whip of the party to whom the member whose seat has been vacated belonged. If the House is in recess, the Speaker can issue a writ, should two members certify to him that a seat is vacant. He cannot, however, issue such a writ if the seat has been vacated through the former member's lunacy or his acceptance of the office of Bailiff of the Chiltern Hundreds, or Steward of the Manor of Northstead, a legal fiction which enables a member to retire from the House, for it has long been established that a member cannot, by his own volition, relieve himself of the responsibilities to his constituents which his membership involves. Until 1926, however, it was necessary for a member to retire from the House on accepting an office of profit under the Crown, which, it may be noted, subjected a private member who accepted ministerial office to the trouble and expense of seeking re-election in his constituency. The Act of 1926, which removed this necessity, retained the Chiltern Hundreds and the Manor of Northstead as offices of profit and thus perpetuated the fiction.

HOURS OF MEETING, ETC.—The House of Lords normally meets during the Session at 2.30 p.m. on Tuesday and Wednesday, and at 3 p.m. on Thursday. The House of Commons meets on Monday, Tuesday, Wednesday and Thursday at 2.30, and on Friday at 11. *Strangers* are present during the debates of both Houses on suffrage, and may be excluded at any time; this applies equally to the *Press Gallery*. Time has modified what was once a rigid exclusion and strangers have in recent years generally been admitted except during the secret sessions of war time. The proceedings are opened by Prayers in both Houses. The *Quorum* of the House of Commons is forty members, including the Speaker, and should a member point out to the Speaker at any time that fewer than forty members are present, the division bells are rung, and if forty members have not appeared within two minutes, the House is said to be *Counted Out*, and the sitting is adjourned. The *Quorum* of the Lords is three.

PROROGATION AND DISSOLUTION.—A session of Parliament is brought to an end by its Prorogation to a certain date, while Parliament itself comes to an end either by Dissolution by the Sovereign or the expiration of the term of 5 years for which it was elected (see p. 333).

ELECTION PETITIONS.—The right of a member of the House of Commons to sit in Parliament can be challenged by petition on several grounds, e.g. ineligibility to sit or owing to his bribery or corruption of the electors. Such petitions were originally decided by the House itself, but as party feeling was too much inclined to dictate the decision, their trial was in 1868 referred to the High Court of Justice.

STANDING ORDERS.—These are rules, which have from time to time been established by both Houses of Parliament, to regulate the conduct of business. These orders are not irrevocable, and like the Statutory Laws of England they can be easily revised, amended or repealed. The custom and precedents of Parliament, which dictate the bulk of Parliamentary procedure, have acquired, in seven centuries, prescriptive rights of obedience as firmly seated as the Common Law. *Sessional Orders* are applicable only to the session in which they are passed.

GENERAL PROCEDURE.—There are differences in the rules which govern the conduct of debates in the House of Lords and in the House of Commons. The Speaker in the Commons is responsible for the preservation of order and discipline in the House, but the only duty of the Lord Chancellor or the presiding Peer is to put the question. A Peer prefaces his remarks with "My Lords," whereas a member of the House of Commons addresses himself to Mr. Speaker.

A member of the House of Commons wishing to speak "rises in his place uncovered." When several members rise together the one whom the Speaker calls to continue the debate is described as *having caught the Speaker's eye*. In the House of Lords in similar circumstances, the House itself decides who shall speak.

Broadly speaking, a member may not, except in Committee, speak more than once to a question except in explanation or reply, and this privilege is granted only to the mover of a motion, or to the Minister or Member in charge of a bill.

A member may address the House from notes but must not read his speech, a distinction sometimes without a difference. In the Commons members must not be mentioned by name; the proceedings of the other House and matters *sub judice* must not be discussed; offensive words or epithets must not be used; a member may not speak after a question has been put, except on a point of order, and then he must address the Speaker "*seated and covered*." He must bow to the Speaker on entering and leaving the House.

QUESTION TIME.—After Prayers the first business of importance in the House of Commons is Question Time, which lasts from 2.45 until 3.30. Two days' notice of questions must be given to the Clerk of the House of Commons, the senior official of the House, who presides over it in the brief interval between the first assembly of a new Parliament and the election of a Speaker, and whose counterpart in the House of Lords is the Clerk of the Parliaments. Members of the House may put an unlimited number of questions to Ministers, but forty-eight hours' notice must be given, and not more than three demanding an oral answer may be made in any one day. Supplementary questions may be put either by the member asking the original question, or by other members, to obtain clarification of a Minister's answer.

COMMITTEES.—On the Assembly of a new Parliament, after the election of the Speaker, the House of Commons deals with the subject of Committees, which are of three kinds:—*Committees of the Whole House*, *Select Committees* (appointed for a specific purpose) and the *Standing Committees* which consider public bills and whose composition, though laid down by Standing Orders, is frequently modified by Sessional Orders. When a bill dealing exclusively with Scotland or with Wales and Monmouthshire is referred to a Standing Committee, in the first place all Scottish, and in the second, all Welsh, members are automatically members thereof. Two of the most important Committees of the whole House of Commons are the *Committee of Supply* and that of *Ways and Means*. The former votes the money to provide for the service of the State, the amount being based on the estimates presented by the Government for the Services. Twenty days are allotted for debates on Supply before August 5, and there may be three other days before or after that date. The other Committee decides the methods to be adopted to raise the money voted by the Committee of Supply. These methods are foreshadowed by the *Budget* and put into effect by the *Finance Act*, while the *Appropriation Act* ensures that money voted for a certain purpose is applied to that purpose only.

CLOSURE AND THE GUILLOTINE.—To prevent deliberate waste of Parliamentary time, a procedure known as the *Closure* (colloquially known as "The Gag") was brought into effect on Nov. 30, 1882. A motion may be made that the question be now put. If the Speaker decides that the rights of a minority are not being prejudiced and 200 members support the motion, it is put to the vote, and, if carried, the original motion is put to the House, without further debate. The *Guillotine* represents a more rigorous and systematic application of the *Closure*. Under this system, a bill proceeds in accordance with a rigid time table and discussion is limited to the time allotted to each group of clauses. If the number of amendments put down appears likely to require more time than has been allotted for their discussion, the Speaker selects those which he considers are most important. The guillotine was first put into use on June 17, 1887, after prolonged debates on the Crimes Bill.

THE PREVIOUS QUESTION.—When the House is disinclined to give a decision on a particular question it is possible to avoid the issue by moving the Previous Question, which is done by one of several motions, e.g. "That the Question be not now put" or "That the House do now proceed to the Orders of the Day."

MOTION FOR ADJOURNMENT.—Adjournment ends the sitting of either House and takes place either under the provisions of a Standing Order or through an *ad hoc* resolution. In the Commons a method of obtaining immediate discussion of a matter of urgency is by moving *The adjournment on a matter of urgent public importance*. A member may ask leave to make this motion by giving written notice to the Speaker after Question Time and if it obtains the support of 40 members and the Speaker considers the matter of sufficient importance, it is discussed at 7 p.m. on that day. A Committee of the Whole House cannot adjourn but its proceedings may be interrupted by a motion *That the Chairman report Progress*. This brings the Speaker back to the House and the Committee seeks permission to sit on a future date.

PRIVILEGES OF PARLIAMENT.—There are certain rights and jurisdictions peculiar to each House of

Parliament, but privileges in their accepted meaning are common to both Houses. The right of imprisoning persons who commit what are in the opinion of the House breaches of privilege is beyond question, and such persons cannot be admitted to bail nor is any Court competent to investigate the causes of commitment. Each House is the sole and absolute judge of its own privileges and where law and privilege have seemed to clash a conflict of jurisdiction has arisen between Parliament and the Courts. Breaches of privilege may be described briefly as disobedience to the orders of either House; assaults or insults to Members or libels on them; and interference with the officers of the House in the carrying out of their duties. The House of Lords may imprison for a period, or may inflict a fine, but the House of Commons only commits generally and the commitment ceases on the prorogation of Parliament. The Bill of Rights established the principle that "freedom of speech and debates and proceedings in Parliament should not be impeached or questioned in any court or place out of parliament." Consequently the House itself is the only authority which can punish a member for intemperance in debate. Freedom from arrest was a much prized privilege, but it applied only to civil arrest for debt (now abolished) and arbitrary arrest by the Government; members are amenable to all other processes of the Law. Freedom from arrest, in the case of members of the House of Commons, applies to the forty days after the prorogation and the forty days before the next meeting of Parliament.

THE SPEAKER.—The *Speaker of the House of Commons* is the spokesman and president of the Chamber. He is elected by the House at the beginning of each Parliament. He was originally a partisan but throughout a century of development between Speaker Onslow (1728) and Speaker Shaw-Lefevre (1839), the theory of the non-partisan Speaker was perfected, and he now neither speaks in debates, nor votes in divisions, except when the voting is equal. His order in the precedence of the Kingdom is high, only the Prime Minister and the Lord President of the Council going before him. He takes precedence of all Peers, except the two Archbishops, and Speakers are almost invariably raised to the Peerage on vacating their office, though Speaker Whitley is believed to have declined the offer of a Viscountcy. The Speaker's most severe disciplinary measure against a member is to *Name him*. When a member has been named, i.e. contrary to the practice of the House called by surname and not addressed as the "Hon. Member for . . ." (his constituency), the Leader of the House moves that he "be suspended from the service of the House" for (in the case of a first offence) a period of a week. The period of suspension is increased, should the member offend again. Speaker Denison has left it on record that "The House is always kind and indulgent, but it expects its Speakers to be right. If he should be found tripping, his authority must soon be at an end." The Speaker's Deputy is the *Chairman of Committees*, officially the *Chairman of Ways and Means*, who presides in the absence of the Speaker and when the House has resolved itself into Committee by the passage of the motion *that the Speaker do now leave the Chair*. He, like the Speaker, is elected at the beginning of each Parliament, and when he is presiding as chairman of a committee neither speaks in debate nor votes. A *Deputy Chairman of Ways and Means* is also appointed, and several temporary chairmen, who frequently preside either over a Committee of the Whole House or over Standing Committees.

SPEAKERS OF THE COMMONS SINCE 1660

PARLIAMENT OF ENGLAND.

1660. Sir H. Grimston.	1680. W. Williams.
1661. Sir E. Turner.	1685. Sir John Trevor.
1673. Sir J. Charlton.	1688. H. Powle.
1673. Edwd. Seymour.	1694. Paul Foley.

1928. Hon. Edward Algernon FitzRoy.
1943. Col. D. Clifton Brown (<i>Viscount Ruffside</i>).
1951. William Shepherd Morrison.

WOMEN MEMBERS OF PARLIAMENT

A movement to grant parliamentary franchise to women was supported in the mid-nineteenth century by Richard Cobden, Benjamin Disraeli and John Stuart Mill, but the vote was not accorded to women until 1918, although they had been included in the County Councils electorate by the Local Government Act of 1888. After a *Speaker's Conference* of all parties, which reported in favour of a limited form of women's suffrage, a clause enfranchising women was carried in both Houses and the *Parliament (Qualification of Women) Act* containing the clause which removed the sex disqualification for membership of the House of Commons, and conferred the franchise on women at the age of 30, received the Royal Assent in 1928. A further Act of 1928 granted them the vote on the same terms as men at the age of 21. Seventeen women were elected at the 1931 Election (11 Labour and 6 Conservative) and 3 have since been elected at by-elections. At the Dissolution there had been 21 women members.

FORFEITED DEPOSITS

Candidates at parliamentary elections who fail to obtain one-eighth of the total votes cast in their constituencies forfeit the deposit of £150 which all candidates must lodge. This law has been in force since the 1918 election.

Ninety-seven deposits were forfeited at the 1951 Election. Deposits were lost by 67 Liberal candidates, 10 Communists, 6 Independents, 4 Independent Labour, 4 Welsh Nationalists, 3 Conservatives, 1 Labour, 1 Irish Anti-Partition and 1 Scottish Nationalist. All 10 Communist candidates forfeited their deposits. In 1950 the record number of 443 deposits had been lost.

THE INTER-PARLIAMENTARY UNION

6 Rue Constantin, Geneva, Switzerland.

The Inter-Parliamentary Union has been in existence since 1889; originally started to popularize the idea of International Arbitration, it achieved its object very substantially in helping to create the Permanent Court of Arbitration by the First Hague Conference and to bring about the convocation of the Second Conference of The Hague. It was preparing proposals for the Third Congress when the 1914-18 War broke out. During both World Wars the Union endeavoured to preserve the Inter-Parliamentary organization in neutral and belligerent countries. In 1945, the Union resumed work on all questions connected with peace and reconstruction, and took up all the appropriate subjects for study. Some of them are as follows:—

1. The development of international law.
2. Economic reconstruction.
3. Displaced persons.
4. National sovereignty.
5. Principles of international morality.
6. Social problems.
7. Colonial questions.
8. Intellectual relations.

BRITISH GROUP.

Hon. Presidents, The Lord Chancellor; Mr. Speaker. President, The Viscount Ruffside, P.C.

Vice-Presidents, The Rt. Hon. Anthony Eden, M.C., M.P.; The Rt. Hon. W. Whiteley, C.B., M.P.; The Viscount Stansgate, D.S.O., D.F.C.; The Marquess of Salisbury, K.G.; The Earl of Clarendon, K.G., G.C.M.G., G.C.V.O.

Chairman, Col. M. Stoddart-Scott, O.B.E., T.D., M.D., M.P.

Secretary, A. G. Michelsen, O.B.E.

COMMONWEALTH PARLIAMENTARY ASSOCIATION

The Commonwealth Parliamentary Association was formed under the title "Empire Parliamentary Association" at the Coronation of His late Majesty King George V. in 1911, between representatives of the Dominion Parliaments and Members of the Lords and Commons, for the purpose of exchanging information and visits between Members of Parliament of the Commonwealth. The Association has a branch in the Parliaments of the United Kingdom, Canada, Australia, New Zealand, South Africa, India, Pakistan, Ceylon, Southern Rhodesia and Malta, in the State Parliaments of Australia, the Provincial Parliaments of Canada, the Parliaments of Bombay, West Bengal, East Bengal, Bermuda, Bahamas, Barbados, Jamaica, Gold Coast, Mauritius, Northern Ireland, Jersey, and the Isle of Man, and in the Legislatures of British Guiana, Trinidad and Tobago, the Windward Islands, the Leeward Islands, British Honduras, Northern Rhodesia, Kenya, Nigeria, Sierra Leone, Gambia, Singapore and the Federation of Malaya, making a total of over 50 branches. The name of the Association was changed to its present form in 1948. Commonwealth Parliamentary Conferences and General Meetings are held in alternate years and meetings of the General Council every year, in different countries of the Commonwealth. There are associated groups in the Congress of the United States and the Parliament of the Republic of Ireland.

Secretary-General and Editor of Publications, Sir Howard d'Egville, K.B.E., LL.D., Houses of Parliament, S.W.1.

Secretary, United Kingdom Branch, Major J. G. Lockhart, C.B.E., Westminster Hall, Houses of Parliament, S.W.1.

REDISTRIBUTION OF CONSTITUENCIES

The Constituencies in the 1951 General Election remained as redistributed before the 1950 General Election. The boundaries of the great majority were then altered and only 80 of the 625 constituencies remained entirely unchanged. The recommendations of the boundary commissions, set up by the Representation of the People Act in 1944, were amended in Parliament (the Government adding 17 additional seats to the 608 proposed by the Commissioners), and the present provisions are embodied in the *Representation of the People Act, 1948*. This Act, in addition, abolished the 12 University seats and the business vote. It further abolished the 12 former double-member constituencies, and redistributed them into single seats. The boundary commissions are permanent bodies and are entrusted with the task of maintaining a review of the present constituencies, and recommending any further changes which may become necessary.

VOTES CAST AT THE GENERAL ELECTIONS, 1945, 1950 AND 1951
AND AT BY-ELECTIONS SINCE 1945

General Election, 1945	
Labour.....	11,985,733
Conservative.....	8,693,858
Liberal.....	2,253,197
Liberal National.....	759,884
Ulster Unionist.....	441,109
Independent.....	287,345
Irish Nationalist.....	148,078
National.....	125,299
Communist.....	102,780
Common Wealth.....	96,247
Independent Conservative.....	40,948
Independent Labour Party.....	30,753
Scottish Nationalist.....	30,594
Welsh Nationalist.....	14,887
Democratic.....	1,809
Independent Socialist.....	472
Total.....	25,018,393

By-elections, 1945-50
At 50 by-elections between the General Elections of 1945 and 1950, the following votes were cast:—

Labour.....	740,914
Conservative and National Liberal.....	641,540
Ulster Unionist.....	87,435
Liberal.....	49,730
Independent.....	35,647
Irish Nationalist.....	24,422
Scottish Nationalist.....	13,040
Welsh Nationalist.....	12,775
Independent Labour Party.....	8,367
Communist.....	5,087

The Labour Government held all the seats which it had won at the 1945 Election, as did the Conservatives and the parties allied to them. The Conservatives in addition gained one seat from I.L.P. and two University seats from Independents. The I.L.P. seat at Bridgeton, Glasgow, was retained at a by-election by Mr. J. Carmichael, who, however, later joined the Labour Party.

General Election, 1950	
Labour.....	13,265,610
Conservative.....	11,166,026
National Liberal and Conservative.....	983,623
Ulster Unionist.....	352,334
Liberal.....	2,621,489
Independent.....	112,318
Communist.....	91,815
Irish Nationalist.....	65,211
Irish Labour.....	52,715
Labour Independent.....	26,014
Welsh Nationalist.....	17,680
Scottish Nationalist.....	10,630
Independent Labour Party.....	4,112
Total.....	28,769,477

By-elections, 1950-51
At 15 by-elections between the General Elections of 1950 and 1951 the following votes were cast:—

Conservative and Associate.....	265,535
Labour.....	264,977
Irish Labour.....	30,883
Liberal.....	2,752
Independent Labour Party.....	1,366
Communist.....	729
Independent.....	453

One Ulster Unionist was returned unopposed. There were no changes in party representation. At the Dissolution, three seats, Droysden, Lanark and Grantham, were vacant.

General Election, 1951	
Labour.....	13,949,105
Conservative and Associate.....	*13,718,069
Liberal.....	739,552
Irish Nationalist.....	94,587
Communist.....	19,640
Welsh Nationalist.....	10,920
Scottish Nationalist.....	7,299
Independent Labour Party.....	4,388
Others.....	62,135
Total.....	28,596,695

* Four Ulster Unionists were returned unopposed.

Votes cast totalled 82.81 per cent of the electorate as against 84 per cent in 1950. Labour candidates received 48.72 per cent of votes cast, Conservatives and Associates 48.05 per cent, Liberals 2.53 per cent, and others 0.7 per cent.

By-elections since October, 1951
At 17 contested by-elections since the General Election in October, 1951, the following votes have been cast:—

Conservative and Associate.....	303,830
Labour.....	298,156
Liberal.....	13,033
Scottish Nationalist.....	2,931
Independent.....	1,983

UNOPPOSED RETURNS

Four members, all Ulster Unionists, were returned unopposed in October, 1951. They were: Rt. Hon. Sir Hugh O'Neill, Bt. (N. Antrim); Major J. R. E. Harden (Armagh); W. Wellwood (Londonderry) and Professor D. L. Savory (S. Antrim). The first two were also unopposed at the 1950 Election, and Mr. Wellwood was returned unopposed at a by-election in May, 1951.

PARLIAMENTARY SUMMARY, LORDS AND COMMONS, 1952-53

THE QUEEN OPENS HER FIRST PARLIAMENT.—For the first time in the present century, a Parliamentary session was opened in State on Nov. 4 by a Queen, whose grace and youthful beauty enriched the pageantry of the picturesque ceremonial. Cheered by many thousands of her subjects during the journey from Buckingham Palace to Westminster in the Irish State Coach, Queen Elizabeth II was conducted to the dais in the crowded House of Lords by the Duke of Edinburgh, who then took a seat beside her on the left of the Throne. Her Majesty first recited in clear tones the declaration of faith and signed it and then, in a voice that could be heard throughout the Chamber, the delivered the Speech with which the session was inaugurated. In the opening words the Queen gratefully acknowledged the sympathy, extended to her and her family on the death of her father, who by his selfless devotion to his duties, had set an example which it would be her constant endeavour to follow. References were then made to the coming visits to Australia, New Zealand and Ceylon, to the hope of an early armistice in Korea, to the meeting of the Commonwealth Prime Ministers, and to the conference on federation in Central Africa. The rearmament of the forces and the development of the Civil Defence organization would be continued, with due regard to the need for maintaining economic strength and stability. The Government would proceed resolutely with the task of placing the national economy on a sound foundation, and would encourage co-operation in increasing

productive efficiency in order to produce at lower cost the goods needed at home and by the export trades. In the interests of the employment and the standard of living of the people the Government would persevere with measures to curb inflation and to reduce the heavy load of Government expenditure, and a steadily increasing number of houses would be built. Bills would be introduced for the reorganization of the iron and steel industry and to provide for changes in the transport industry. Other legislation foreshadowed in the Speech included measures relating to the Town and Country Planning Acts and to local government superannuation, a Bill to make certain changes within the framework of the Education Acts in the law affecting voluntary schools, and another to provide financial help for the building of fishing vessels to encourage the industry. Proposals would also be made for improving the maternity benefits of the national insurance scheme and amending the industrial injuries legislation and an extension would be proposed of the existing temporary Acts on leasehold property. The Queen then withdrew, again escorted by her husband, and on arrival back at the Palace, Her Majesty and the Duke came on to the balcony with their children in response to the cheering crowd. When the two Houses resumed, the debates on the Address in reply were opened. In the Upper Chamber, it was moved by Lord Mancroft and seconded by Viscount Buckmaster, and was agreed to on Nov. 6 after Viscount Samuel, the veteran Liberal

leader, congratulated by other Peers both on his 82nd birthday and on the fiftieth anniversary of his election to the House of Commons, had called attention to the omission from the Speech of any reference to the summoning of an all-Party conference to consider the composition of the House of Lords. Major W. J. Anstruther-Gray (Berwick and East Lothian) moved and Mr. H. Price (Lewisham West) seconded the Address in the Commons, and they were followed by Mr. Attlee who declared that it was very difficult to judge from the Speech what the Government were proposing to do and promised that the Labour Party would offer their resolute opposition to the iron and steel and transport measures. The Prime Minister claimed that the Parliamentary situation in the House gave a definite impression of greater stability. The Government did not doubt their ability to carry through the legislation mentioned in the Speech, and in particular to pass into law the important rectifying measures on transport and steel. They hoped that whatever differences of political approach there might be the Steel Bill would at least be judged on both sides of the House by the one primary test—how it would help the iron and steel industry to maintain and further develop its productivity. The President of the Board of Trade, Mr. Thorneycroft, told the House on Nov. 5 that it was still the Government's intention to introduce eventually a Bill dealing with monopolies, in particular, because they considered the nationalized industries should be treated on the same basis as the private monopolies. The foreign situation was surveyed on the following day by Mr. Eden, who spoke of the marked improvement in Britain's relations with Egypt and saluted the election of General Eisenhower as President of the United States, remarking that he had no doubt we could count on his continuing help and co-operation in the problems of the free world. Mr. Herbert Morrison on Nov. 10 moved the official Opposition amendment, which declared that the Speech disclosed no positive and effective proposals for dealing with the serious economic position of the country and that the House had no confidence in the Government, whose policies threatened a return to the social conditions of the inter-war years. After two day's debate this was rejected by 313 to 279 and the motion for the Address was agreed to. The Chancellor of the Exchequer, Mr. Butler, on Nov. 11 claimed a great record of positive achievement for the Government over the past year and especially welcomed the improvement in our overseas finances. From the shadow of an overwhelming crisis, he said, we had taken a great stride forward. We had established a base camp from which we must start the really arduous part of the campaign back to security and prosperity. He agreed that the present level of taxation weighed heavily on enterprise, initiative and thrift, but the task of reducing it could not be an easy one though it remained the prime objective of the Government. Mr. Attlee expressed the hope that the Government would resist the suggestion for the use of "a Geddes axe" which might be made a pretext for all sorts of follies.

THE QUEEN'S TITLE.—As the result of an agreement reached at the Commonwealth Prime Ministers' Conference in London early in the year, a Bill authorizing a change in the royal style and titles in the United Kingdom was speedily passed by both Houses in time to permit the change by proclamation before the Coronation. Similar changes were made in most countries of the Commonwealth. The royal title proposed for use in

Great Britain was "Elizabeth the Second, by the Grace of God of the United Kingdom of Great Britain and Northern Ireland and of her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith." The measure was formally presented in the House of Commons on Feb. 26, and was passed through its remaining stages in that Chamber on March 3, the only active opposition coming from some Scottish members who claimed that the style was not historically accurate for Scotland. Sir David Maxwell Fyfe, moving the second reading, said the Prime Ministers had agreed that each member country should retain a common element, which was to be a reference to her Majesty's other realms and her title as Head of the Commonwealth. Mr. Gordon Walker, welcoming the Bill on behalf of the Opposition, said the adoption of a locally variable title might well be an important landmark in the constitutional development of the Commonwealth. For the Scottish objectors, Mr. Emrys Hughes moved the rejection, saying that they merely asked that the title for Scotland should be "Queen Elizabeth" without any numerals, but the Home Secretary pointed out that since the Act of Union the method of using the highest numeral in the title of the sovereign had been followed consistently. The amendment was defeated by 328 to 39, and the Bill was read a second time. The motion to go into Committee was challenged but was carried by 278 to 55, and before the stage was completed a few Scottish M.P.s walked out as a protest against taking the remaining stages immediately. The Bill was then read the third time. The Lords gave the measure a second reading and passed it through the remaining stages on March 11 and it received the Royal Assent on March 26.

ROAD HAULAGE DENATIONALIZED.—The first of the two promised denationalization measures to be dealt with was the Transport Bill, which returned the road haulage industry to private ownership, decentralized the railways and aimed at the improvement of their competitive position. The Bill, given a first reading on Nov. 5, differed in several respects from that presented but not considered in the closing days of the previous session. It removed most of the restrictions on charges imposed on railways a century ago, the aim being to enable them to compete on reasonable terms with other forms of transport, safeguards being provided against unreasonable charges to traders and others. A disposal board would be established to sell the Transport Commission's road haulage business, and a levy on road goods vehicles would come into force on January 1, 1954, designed to raise £4,000,000 a year, which would be applied to compensating the Commission for direct losses arising from the sale to private enterprise. At the end of 1954, the 25-mile limit imposed on "A" and "B" licensed vehicles by nationalization would be removed. Moving the second reading on Nov. 17, the Minister of Transport, Mr. Lennox-Boyd, said that the Bill was presented not only as the complete fulfilment of an election pledge but as a cardinal measure to help in the pressing economic difficulties. The Government believed that competition gave a better service than a monopoly and that decentralization was the best way to have a good service. Independent enterprise, or in the case of the railways regional enterprise, was the best way to achieve that decentralization. It was proposed to impose a duty on the British Transport Commission to dispose of their long-distance road activities in an expeditious way, but to allow them

to retain a number of vehicles broadly approximating to the number owned by the railways before nationalization, and in addition to allow for what might have been the increase in the intervening years. This would make the Commission the largest road haulage undertaking in the country. The proposals concerning the lifting of the 25-mile limit would not diminish transport resources and would not imperil the resources of the Commission. Mr. Herbert Morrison said the Opposition believed that the Bill was fundamentally bad. It was a backward measure and had not the support of informed men in the transport industry. He declared that it was a reactionary, mischievous and destructive Bill, and the Opposition would fight it with all the vigour at their command throughout all its stages. Winding up the debate, Mr. Ernest Davies said that when Labour returned to power it would recreate an integrated, publicly-owned transport system and in the process would see that no one was compensated twice. On the following day, Mr. Barnes, the former Transport Minister, moved the rejection of the Bill, but this was defeated by 308 to 282, and the second reading was agreed to. A time-table for the remaining stages was carried by 301 to 275 on Nov. 24, and the committee stage, to which seven days were allotted, began on Dec. 3. A Labour amendment to increase the membership of the disposals board from 6 to 8 was negatived by a majority of 25, after Mr. Lennox-Boyd had agreed to increase the number by one and to invite the trade unions to provide a list from which he could appoint the additional member. Mr. Morrison on Dec. 15 moved to delete the clause abolishing the Railway Executive but this was defeated by 275 to 273. The Minister said that no one suggested that public ownership of the railways should be disturbed or that the main line railways should be restored as they were in 1947. Most people agreed that the railway organization needed examining in the light of experience. The Transport Commission, he added, had on a number of occasions, formally and informally, asked him to bring the Executive to an end. Mr. Lennox-Boyd also said that it was the Government's intention that the docks and harbours should be administered separately from the railways but under the Transport Commission. The Bill passed through committee on Dec. 18, and the report stage opened on Feb. 4, when a Government amendment placing a duty on the Commission and the disposals board to set up units in such a way that they could not on sale pass into a group of private hands and be immediately amalgamated was agreed to. On the third of the three days allotted to the report stage, a series of Government amendments was carried to preserve the protection given to coastal shipping and to protect the London travelling public by providing that increased charges up to 10 per cent in London must be based on London costs only and that in respect of higher increases there must be a public inquiry. The Bill received its third reading on Feb. 16 by 266 to 257, a majority of 39. The Minister of Transport said that the Bill had been improved considerably in its various stages. The Government hoped that the measure of freedom given to the railways in relation to charges would enable them to become really competitive and to offer the public a better service. For the Opposition, Mr. Callaghan said the Bill would settle nothing and would not remain on the Statute Book for long. The House of Lords gave a second reading on Feb. 25 after three days' debate, Lord Leathers announcing that the Government proposed to include in the Bill permissive powers which would enable the Transport Commission to assemble

some of the assets in the form of companies in order to ease the process of transfer from public to private ownership. An amendment with this aim was agreed to in committee on March 10, and the stage was completed two days later after the Government had accepted amendments to increase the membership of the Commission from 10 to 14, including four full-time members. The report stage was concluded on March 19 and the Bill was read a third time on March 26, Lord Leathers stating that in its passage through the House nearly 100 amendments, over 30 of which must rank as important, had been incorporated in the Bill. The consideration by the Commons of these amendments, which began on April 21, led to some heated debates and long sittings and eventually the Government, on April 27, introduced a guillotine motion for the remaining amendments. This was carried against bitter Labour opposition by 307 to 275, and the outstanding changes were agreed to by 304 to 276, the Royal Assent being given on May 6.

REORGANIZING THE STEEL INDUSTRY.—The other denationalizing measure, the Iron and Steel Bill, secured a less stormy passage, though strongly opposed by the Labour Party. Read a first time on Nov. 5, the Bill proposed to set up a Board to supervise the whole industry and to transfer the securities of the nationalized companies to a Holding and Realization Agency, to which would be entrusted the duty of returning these companies to private ownership. The Board to be established would have an independent chairman and its members would be persons with wide experience of both sides of the industry. All iron and steel producers would be under a duty to observe any maximum prices determined by the Board, which would be empowered to restrain a company from embarking on a scheme considered prejudicial to general development. Moving the second reading on Nov. 25, Mr. Duncan Sandys said its two main objectives were the establishment of a comprehensive scheme of public supervision and the restoration of independent initiative and financial responsibilities to the companies. Nationalization, he declared, had been introduced as an act of political appeasement against the better judgment of many of the Labour Party and the trade unions, and it had turned out to be a greater flop in that respect than it had been as an act of industrial policy. The Government had deliberately adopted a moderate middle course, not as a compromise solution to a political controversy but as a common-sense solution to an industrial problem. Mr. George Strauss, a former Minister of Supply, said the Bill was not a middle course at all, and the proposed Board was a sham, but Mr. Clement Davies, for the Liberals, welcomed the Bill. Mr. Macmillan said on Nov. 27 that the Board would be more comprehensive than the Steel Corporation and would exercise powers over the major matters of development, maximum prices and raw materials. Its character and functions would make it a better instrument for protecting the interests of the men employed in the industry and of the consumers of its products. The second reading was carried by 305 to 269, a majority of 36. When the committee stage opened on Jan. 28, Mr. Strauss moved an amendment to delay the coming into operation of the measure, but this was negatived, and another to retain the Iron and Steel Consumers' Council was rejected by 260 to 237. The Minister accepted an amendment to increase the minimum number of members on the Board from 7 to 9 and the maximum number from 11 to 14. A Government amendment to exempt

foundries from the application of the Board's powers of veto in respect of development schemes was carried by 238 to 218 on Feb. 12, and the committee stage was concluded on Feb. 24. The Bill was recommitted on March 4, when amendments moved by Mr. Sandys were agreed to enabling the Minister, if so empowered by the Board, to undertake the provision of facilities for the development of iron ore from overseas for the industry in the event of the Board failing to secure provision of these facilities by the industry itself. The report stage was then opened, and a new clause was added to provide for consultation between the Board and the Government on the formulation of policy in relation to the European coal and steel community. Before this stage concluded on March 11, another Government amendment was agreed to with the object of providing that the Holding and Realization Agency, when disposing of the undertakings of the industry to private ownership, should secure that the consideration obtained was financially adequate. The third reading was obtained on March 17 by 304 to 271, a majority of 33. Mr. Strauss repeated that at the first opportunity the Labour Party would restore the industry to public ownership. Mr. Sandys replied that such a threat was likely to give the industry a powerful additional incentive to make a success of the new organization. If the Board was successful, he was confident that the Opposition would not seek to disturb it for purely party reasons and the Government felt very sure that the scheme would succeed. The Lords gave the Bill a second reading on March 31, and in committee on April 21 the Government accepted an amendment to delete the power of the Minister to own and operate sea-going ships. The third reading was agreed to on May 5, and, the Commons not objecting to the Lords amendments, the Royal Assent was accorded on May 14.

TAX RELIEFS IN BUDGET.—The Chancellor of the Exchequer's second Budget, his "incentive Budget" as he called it, which he introduced on April 14, was the first since the war which imposed no new taxes. Instead, Mr. Butler proposed a reduction of 6d. in all rates of income tax, the abolition of the Excess Profits Levy, and a cut of one quarter in purchase tax on a large range of goods, reliefs which were "carefully designed for the prime purpose of giving the incentive for greater production." He said that the United Kingdom balance of payments on current account had changed from a deficit of £398,000,000 in 1951 to a surplus of £291,000,000 in 1952, and there had also been a most welcome improvement in our gold and dollar reserves. With lower levels of production and imports, total revenue for the year amounted to £4,439,000,000, or £222,000,000 less than his estimate, while total expenditure was £4,351,000,000, an excess of £88,000,000, giving an "above the line" surplus of £510,000,000. In 1953-54, total expenditure was estimated at £4,259,000,000, an increase of £208,000,000, over the preceding year's estimate, defence expenditure reaching the sum of £1,497,000,000, an increase of £120,000,000. Civil supply expenditure was estimated at £2,089,000,000, or £60,000,000 lower, and of this total £1,264,000,000 was for the several services, an increase of about £80,000,000, while the provision for food subsidies was £220,000,000. The Chancellor announced that sugar rationing would end soon, though the precise date could not yet be given, and he added that a million tons of surplus Cuban sugar was to be bought at an advantageous price. Against the total expenditure

for the coming year, he estimated that on the existing basis of taxation total revenue would amount to £4,538,000,000, an increase of £99,000,000 providing an estimated surplus of £278,000,000, an increase of £190,000,000 over the surplus actually achieved in 1952-53. After a brief survey of prospects, the Chancellor said he had come to the conclusion that help must be given to industry in the Budget. His first proposal was to reinstate the system of initial allowances for capital expenditure on plant and machinery, on the construction of industrial buildings and on mining works. The rate for plant and machinery would be 20 per cent in respect of capital expenditure incurred after that day, in respect of the construction of industrial buildings it would be 20 per cent, and, because of the great importance to our national economy of new mining development, the rate for capital expenditure on new mining works would be 40 per cent. Should we stop at this assistance to industry, asked Mr. Butler. All the evidence, he said, suggested that we ought, if we could, to do more. Could we afford to do something this year? His answer to this question was also favourable, and having stated that his judgment was that we should retain a surplus of rather more than was realized last year the Chancellor drew cheers from the Government benches by announcing that his conclusion from that was that he should propose no new taxes at all. "For the first time since the war—and high time it is—we take a step in a new direction," he said. "The reliefs which I shall propose are designed to improve our competitive efficiency, to provide incentives for great effort, and to encourage private saving." Turning first to purchase tax, he said the present rates were too high with the return of more normal conditions. He had decided on an immediate all-round reduction of a quarter off each of the rates in the general field not covered in his first Budget, the 100 per cent rate being reduced to 75 per cent, the 66½ per cent to 50 per cent, affecting such things as motor cars, radios and television sets, refrigerators and washing machines, and the 33½ per cent to 25 per cent, affecting many items in daily household use, such as carpets, hardware and bicycles. A few classes of goods would receive exceptional treatment and larger reductions, and taxicabs of a type approved in London would be exempt, not only from purchase tax but from all hire purchase restrictions. Then the Chancellor came to entertainments duty, and said he proposed to exempt amateur sport from the duty. The exemption would apply to games, races and other sports provided by clubs or similar organizations established and conducted for the promotion and furtherance of amateur sport and not conducted or established for profit. This definition would not do for cricket, but because the game occupied a special place among sports he proposed to exempt it from the duty altogether, a decision that brought a burst of cheering. After a number of minor technical changes, Mr. Butler said that owing to defective machinery of assessments, residents in the Scilly Isles had enjoyed exemption from tax on income and profits arising there. "This happy state of affairs" would be brought to an end. He proposed to increase from £500 to £600 the limit of income which entitled persons of 65 to a deduction corresponding to that given for earned income on any investment income included, and to increase to £60 the allowance for dependent relatives incapacitated by old age or infirmity, and the housekeeper allowance. Authors' royalties of the first two years after publication were to be spread for tax purposes in the same way as a lump sum payment. Chattels normally kept in houses

in which the Government had an interest or which had been accepted in payment of death duties would be accepted in payment of estate duty. Reverting to his main theme, the need to give a real boost to production, the Chancellor said the excess profits levy would be ended with effect from January 1, 1954, and added that they would get £200,000,000 from this tax in the coming year and rather more in the following year. With these proposals, British producers would have a chance to plan ahead, but an immediate quickener was indicated. Finding that more than half the benefit of a reduction in the standard rate of income tax would go to corporate industry and the rest to individuals in every walk of life, he proposed that the standard rate should be reduced by 6d.—from 9s. 6d. to 9/- in the £. With this relief he linked proposals to reduce each of the lower rates by 6d., the first £100 of taxable income being charged at 2s. 6d., the next £150 at 5/-, and the next £150 at 7/-. The Chancellor, summing up his proposals in "this incentive Budget," said the total reduction in taxation this year would be £169,000,000, so that he would carry forward a surplus "above the line" of about £109,000,000. The success of this policy, he said, would depend on the extent to which industry and the public responded to the call. "We take a new direction," concluded Mr. Butler. "We step out from the confines of restriction to the almost forgotten but beckoning prospects of free endeavour and greater reward for effort." The necessary Budget resolutions were agreed to. The Opposition attack was opened on the following day by Mr. Gaitskill, who said it was right to remove the absurd and bad excess profits tax, but questioned whether it was desirable to release extra purchasing power by reducing purchase tax and income tax. He said that no one below the income tax level got a single penny so that virtually the whole of the old age pensioners and the lower-paid workers were entirely without benefits. "The richer a person, the far greater the concession" he declared. The effect of the Budget was to increase substantially, instead of diminishing, the difference in incomes. It was unfair and would long be remembered as only one more example of the Tory efforts to put back the clock and strengthen the wealth, power and privilege of the well-to-do. Winding up the general debate on April 20, the Chancellor, alluding to the possibility of changed world conditions, said no one could foresee what any possible rapid change from defence expenditure to social expenditure would bring about. The Budget had been framed against a background of any development, whether in the field of defence expenditure or whether there should be signs of recession, great or small. The Finance Bill was brought in, and it was read a second time on May 7. For the Labour Party, Mr. Jay asked why there were no incentives for the ten million earners who were below income tax level. In reconstructing income tax, one of the main purposes should be to exempt altogether the main bulk of wage earners from paying income tax. Mr. Butler in his reply said the Government had been disappointed at some of the progress they had seen in their general trade and payments policy, and he had so informed United States Ministers. When the committee stage opened on May 19 Mr. Gaitskill moved an amendment to widen the scope of the exemption of cricket matches from entertainments duty so as to include all entertainments which consisted of games or other sports, but this was negated by 267 to 256, and on the following day amendments to exempt football and professional boxing from the duty were defeated. An amendment was

accepted on June 10 increasing the income tax allowance for the services of a daughter from £25 to £40. Mr. Butler, opposing on June 22 a proposal to reduce the entertainments duty on cinema admission prices—rejected by 218 to 195—said although there was a case for the small cinemas the difficulty in the industry was not confined to them. The trend gave him cause for anxiety and he promised to watch the matter carefully. The Bill passed through committee on June 23, the report stage was concluded on July 8 and the third reading was given without a division on July 13. During the final debate, the Chancellor said production was continuing to expand, but the general trade position was not yet satisfactory and we were not getting enough exports. The Government had taken the first step in relieving the burden of taxation, and whether they could continue on this path was entirely in the hands of industry and the country as a whole. After almost formal progress through the House of Lords, the Bill received the Royal Assent on July 31, when the Session was adjourned until Oct. 20.

HIGHER BENEFITS FOR MOTHERHOOD.—Increased maternity benefits and compensation for home confinements were given in the National Insurance Bill, presented and read a first time on March 17 and given an unopposed second reading on April 28. Most of the recommendations of the National Insurance Advisory Committee on the working of the maternity benefit scheme were embodied in the Bill. Instead of the existing grant of £4 and an attendance allowance of £1 a week for 4 weeks, a housewife not doing paid work would receive a grant of £9, and, if confined at home, or elsewhere at her own expense, a new and additional grant of £3, the attendance allowance being dropped. A woman doing paid work until shortly before the birth of her child would also receive the grant of £9, with another £3 if she had her baby at home, and the maternity allowance of 36s. a week for 13 weeks would be altered to 32s. 6d. a week for 18 weeks. An important change was that the maternity allowance would only be paid to women who had chosen to pay contributions under the national insurance scheme. Moving the second reading, Mr. Peake, Minister of National Insurance, said the Bill made the most generous provision for motherhood yet made in the history of our social service. The benefits which it provided would ensure good conditions for mothers at a critical time and a good start in life for children. Dr. Edith Summerskill said the provisions of the Bill were acceptable, but she saw the barren hand of officialdom which had departed from the humane recommendations of the Advisory Committee. If the Bill were passed in its present form, she expected that large numbers of expectant mothers would be physically incapable of complying with the regulations. Mr. Turton, the Parliamentary Secretary to the Ministry, said that the estimated cost of the Home Confinement Grant would be about £1,000,000 a year, and it was expected that 330,000 mothers would benefit. The Bill received the Royal Assent on July 14. Another measure, which reached the Statute Book on July 31, abolished the condition of permanence for drawing long-term disablement benefit for industrial injuries, and enabled benefit to be paid when there was an assessment by a medical board of as little as one per cent instead of one of 20 per cent, whether permanent or not.

HELP FOR VOLUNTARY SCHOOLS.—The main proposal of the Education Bill promised in the Queen's Speech was intended to widen the Ministry's power to make grants towards the cost of

building new voluntary schools. It permitted the grant of up to 50 per cent for new "aided" or "special agreement" schools in so far as they provided for a substantial number of pupils who had been attending, or would have attended, a similar school had their parents not moved their place of residence because of housing or town planning developments. The Bill also extended the powers of local education authorities by enabling them to build a "controlled" school where necessary to replace other voluntary schools and to enlarge such schools. Another clause made it plain that it was the duty of local education authorities to provide full facilities for dental treatment, other than specialist treatment by means of full-time or part-time dentists in their own school dental service. The Bill was welcomed by the Opposition when it was given a second reading on Dec. 8, and it was sent to a standing committee and read a third time on May 14, receiving the Royal Assent on July 14.

STRONGER MONOPOLIES COMMISSION.—The demand for the more speedy completion of inquiries by the Monopolies and Restrictive Practices Commission was met by a Bill which increased its membership from 10 to 25 so that the work could be undertaken by separate groups of not less than 5 members each. Moving the second reading on July 10, Mr. Peter Thorneycroft, the President of the Board of Trade, said that the chairman of the Commission was placed on the same type of basis as a judge, and the report of a group of members would be, effectively, the report of the Commission. It would be wrong, he said, to suppose that British industry was wholly riddled with restrictive practices, but it was probably true that there were too many of them though they were not on one side of industry alone. Mr. Harold Wilson said the Labour Party accepted the Bill as far as it went. There were, he claimed, collective practices which called for outright banning from the whole of British industry by general legislation. Industry was honeycombed with restrictive practices which impeded the national effort. The Bill was read a second time, and its consideration was not completed by the House of Lords before the recess.

THE EAST COAST FLOODS.—Prompt action was taken by the Government to assist those who suffered from the flooding of the east coast which followed the severe gales early in the year. The Prime Minister told the Commons on Feb. 2 that the disaster would be dealt with on a national basis, and on Feb. 19 the Home Secretary said that the Government would give a pound for every pound contributed to the national relief fund opened by the Lord Mayor of London, the total cost being estimated at between £40,000,000 and £50,000,000, in addition to the cost of repairs to the sea defences. The House on March 23 agreed to a motion accepting the principle that the restoration should be treated on a national basis. On April 1 a second reading was given to the Coastal Flooding (Emergency Provisions) Bill, which strengthened the powers of the six river boards concerned for the speedy and permanent reconstruction of sea defences to protect areas that were flooded or threatened with flooding. The Minister of Agriculture was empowered to authorize the boards to enter upon land, construct new embankments, build access roads and take land for temporary housing. The Bill also gave powers to the Minister to make schemes for acreage payments to farmers for treating flooded agricultural land in an approved manner, so as to

bring it back to productivity, farmers who neglected to take the necessary steps being liable to supervision and ultimately, if necessary, to dispossession. Sir Thomas Dugdale, the Minister of Agriculture, said that about 158,000 acres of land had been flooded, and this was bound to mean a considerable loss of food production, whatever measures should be adopted. The Government proposed that acreage payments should be available for allotments and parcels of land of not less than half an acre. The Bill was quickly passed through both Houses and received the Royal Assent on May 20.

CENTRAL AFRICAN FEDERATION.—After the House of Commons had on March 24 approved the proposals for the federation of Northern and Southern Rhodesia and Nyasaland by 304 to 260, a Bill seeking the authority of Parliament for the introduction of an Order in Council containing the scheme was presented in the Commons on April 22. It was given a second reading by 247 to 221 on May 6, when Mr. Oliver Lyttelton told M.P.s that the Prime Minister of Southern Rhodesia had indicated that a Central African University with no colour bar would follow the projected federation as one of its first fruits. The Colonial Secretary said that the new University would make a great contribution towards co-operation and partnership between the races of Central Africa. In committee on June 9, an amendment to provide for federation as soon as the majority of the inhabitants of all races within each of the territories had decided in favour was negatived by 231 to 214, and another to establish a Federal Cabinet was defeated by 221 to 205. A proposal that the Federal Legislature should be elected on a franchise subject to the approval of the Secretary of State was rejected by 173 to 160 on June 18. The committee stage was concluded and the bill read a third time by 188 to 165 on June 24 after the defeat by 195 to 176 of an amendment designed to ensure that Northern Rhodesia and Nyasaland should not be amalgamated with Southern Rhodesia unless a majority of all three territories favoured such a course. When the measure received its second reading in the Upper Chamber on July 7 Viscount Swinton said the British Government would go forward on its high venture of federation with a large measure of goodwill and with a firm faith in its future. The Royal Assent was accorded on July 14 and before the adjournment both Houses carried motions asking that an Order in Council be made in the terms of the draft previously laid before Parliament.

DEVELOPMENT, LEASES AND RATING.—A series of Bills affecting owners of land and houses in various ways was passed during the session. The first amended the planning and development schemes. The Government on Nov. 18, 1952, abolished forthwith the development charge payable under the Acts of 1947 on land to be developed, and the new Bill not only gave effect to this decision but sanctioned the payment to landowners of compensation for loss suffered from planning restrictions as and when such restrictions were imposed, instead of distributing £300,000,000 to landowners for the loss of development rights, provided for under the earlier Acts. When the Bill received a second reading by a majority of 30 on Dec. 1, Mr. Macmillan, Minister of Housing, said that another more elaborate and complicated Bill would be required soon to complete the operation. Another interim measure, which originated in the House of Lords, extended until Dec. 24, 1954, in England and Wales, and until Nov. 22, 1954, in Scotland, the provisions of the Act of 1951 which imposed

a short stay on the expiry of leases of houses and gave the right of renewal of leases to shopkeepers. In the Commons, the Home Secretary said it was the Government's intention to introduce permanent legislation at the earliest possible moment and before this Bill expired. The Valuation for Rating Bill, which received the Royal Assent on July 31, provided a new system of ascertaining the gross value of dwelling houses in drawing up the new valuation lists in England and Wales, by using reasonable rental values in the spring of 1939, assuming that the property itself and all the physical circumstances of the neighbourhood, such as factories and transport services, were in 1939 what they were at the time of the valuation. Parliament also passed a Bill to make available £250,000 a year for repair and maintenance grants and £500,000 a year, for 5 years, for the purchase of outstanding buildings, large or small, which would otherwise be lost. The houses would be selected on the advice of three Councils, for England, Scotland and Wales, in the hope of preserving for future generations the gems of our domestic architecture in a state which showed them to the best advantage. Another measure passed before Parliament rose was one which sanctioned the expenditure of a further £50,000,000 on the fourteen new towns, 11 in England, one in Wales, and two in Scotland. Mr. Marples, moving the second reading on June 30, said Parliament had already sanctioned the spending of £100,000,000, and the total cost would be about £250,000,000. He appealed to industrialists to consider the advantages which might accrue from setting up new works in these areas.

DEALING WITH THE "COSH BOY."—The Commons on Feb. 13 rejected by 159 to 63 a private member's Bill which sought to restore birching as a court sentence for crimes involving personal violence, but M.P.'s welcomed a Government-sponsored measure to deal with one aspect of the problem, the Prevention of Crime Bill, to which a second reading was given on Feb. 26 without a division. The Home Secretary, Sir David Maxwell Fyfe, said they were faced with a level of violent crime roughly treble the pre-war rate and too many of these offences involved the use of offensive weapons. He claimed that the Bill would bring an immediate strengthening of the forces of law and order. It gave no power of search and would not enable the police to stop and search a passer-by, but the police would be able to deal with the "cosh boy" before he used his cosh. The principal difficulty had been to define offensive weapons. They had been divided into three groups: articles made for causing injury to the person, such as stilettos or knuckle dusters; articles adapted for use for causing injury, such as a sock filled with sand or a piece of wood fitted with a razor blade; and articles intended for use for causing injury to the person. If a court were satisfied that an article was an offensive weapon within one of these categories the accused person would be guilty of an offence unless he could show that he had lawful authority or excuse for carrying it. The Bill would not stamp out violent crime, but there was hope that it would go some way towards diminishing such crime. Mr. Chuter Ede said the Opposition welcomed the Bill and wished the Home Secretary success in getting it promptly and thoroughly administered when it became law. After being considered by a standing committee, the House during the report stage on March 26 defeated a proposal to permit the carrying of an offensive weapon for purposes of self defence or the protection of others, the Home Secretary pointing out that such a sanction would give

carte blanche to such undesirable elements as rival race gangs. The House of Lords gave the Bill a second reading on April 14 after the defeat of a motion for rejection by 60 to 3 and it received the Royal Assent on May 6.

DEFAMATION LAW MODIFIED.—Important changes in the law of libel and slander were effected by a private member's measure, the Defamation (Amendment) Bill, which received the Royal Assent on Oct. 30 just before the first session was prorogued. Sponsored by Mr. Harold Lever, the Labour M.P. for the Cheetham division of Manchester, and generally welcomed by members of all Parties, including the Law Officers, the Bill was based on the recommendations of the Porter Committee, which reported in 1948. It provided that in the case of "unintentional defamation" a correction and apology should suffice without the award of monetary damages, and that in the case of slander affecting official, professional, or trade reputation the plaintiff should not be obliged to prove special damage. Monthly periodicals were brought under the definition of newspapers, and the categories of reports entitled to privilege were extended. Another reform was to treat as publication in permanent form and liable to the sphere of libel both sound and television broadcasts, thus removing a previous distinction that broadcasts from scripts came under the law of libel and those given without scripts were classed under slander. After an unopposed second reading, the Bill was considered by a standing committee, which carried a number of amendments, including one making it clear that the definition of words in the Bill should apply to television. A new clause provided that a person who was injured by a false or malicious statement about his property or business which occasioned him financial loss could maintain an action for libel without having to claim special damages, and another exempted from proceedings for defamation any authorized reproduction of extracts from the Official Report of Parliament. Later the Commons decided to exclude fair and accurate reports of proceedings of legislatures of any foreign country from the protection of qualified privilege. The House of Lords restored this provision, but the elected Chamber disagreed with this addition on Oct. 24 and the Peers did not insist.

PRIVATE MEMBERS' LEGISLATION.—Several useful measures brought forward by private members were passed during the Session. One introduced by Mr. J. H. Harrison, provided for the better rear lighting of cars and lorries by compelling them to carry after dark unobscured and efficient red reflectors as well as rear lights, motor-cycles and cycles being also affected. Another, fathered by Sir Geoffrey Hutchinson, made the acceptance by accommodation agencies of fees for registration for flats or houses a criminal offence, with penalties up to £100 or three month's imprisonment. The establishment of a register of pharmaceutical chemists as the only register of pharmacists, abolishing the two existing registers, was ordered by a Bill brought in by Mr. John Hall. Bills were also passed providing for the humane slaughter of pigs and to check the worrying of sheep and other livestock by dogs by imposing penalties on the owners of dogs found straying or not under control on any agricultural land and known to have worried livestock. On Feb. 27, the Commons, by 65 to 53, gave a second reading to a Bill to set up an investigation into the effects of the introduction of a simplified system of spelling on the teaching of reading in schools, but its promoter withdrew it later.

Government and Public Offices

NOTE.—The salary scales shown throughout this section are basic and exclude the Pay Addition, which is as follows:—Ten per cent. on the first £500 p.a.; five per cent. on the second £500 p.a.; two-and-a-half per cent. on the third £500 p.a.; for officers in receipt of remuneration of £1,500-£2,000 a year inclusive £100 p.a.; for officers in receipt of £2,000 to £2,100 a year such amounts as will bring their inclusive remuneration to £2,100 a year.

ADMIRALTY

(see Royal Navy)

MINISTRY OF AGRICULTURE AND FISHERIES

3 Whitehall Place, S.W.1
[Trafalgar: 7711]
23-25 Soho Square, W.1
[Gerrard: 6911]

THE MINISTRY OF AGRICULTURE AND FISHERIES was constituted in 1919. It replaced the Board of Agriculture, established in 1889, which in 1903 had become the Board of Agriculture and Fisheries. The Ministry is responsible, in England and Wales, for promoting the efficiency of agriculture and fisheries. It provides for advice to farmers and horticulturists through the National Agricultural Advisory Service and to landowners through the Agricultural Land Service. The Minister's executive agents in the field are the County Agricultural Executive Committees. The Ministry has powers and duties in relation to agricultural education, research, marketing, machinery, and labour; the eradication of pests and diseases (including diseases of animals in Scotland as well as in England and Wales); the distribution of scarce farm requisites; the control (where necessary) of imports and exports of agricultural produce and supplies; reviews of farm prices; and the collection and publication of agricultural statistics.

The Fisheries Department of the Ministry is responsible for administering the Acts governing the catching and landing of fish, and whaling; and conducts scientific investigations into problems of marine and freshwater fisheries.

The administration of the *Ordnance Survey* and of *Kew Gardens* is under the control of the Ministry.

Minister of Agriculture and Fisheries, THE RT. HON.
SIR THOMAS LIONEL DUGDALE, Bt., T.D., M.P.
£4,000

Private Sec., G. L. Wilde.
Assistant Private Secs., Miss M. E. Vince; M. E. Blackman.

Parliamentary do., W. M. F. Vane, M.P., unpaid
Joint Parliamentary Secretaries, The Lord Carrington,
M.C.; G. R. H. Nugent, M.P., £1,500
Private Secretaries, A. C. McCarthy; A. K. H. Atkinson.

Permanent Secretary, Sir Alan Hitchman, K.C.B., £4,500
Private Sec., Miss E. J. Marston, M.B.E.

Deputy Secretaries, Sir Reginald Franklin, K.B.E.,
C.B.; Sir George Dunnett, K.B.E., C.B., £3,250

Private Secs., Miss M. L. Goldman; J. G. Kelsey.
Legal Adviser and Solicitor, A. R. A. Weston, C.B.E.
£3,250.

Chief Scientific and Agricultural Adviser (Dir.-Gen.,
Nat. Agricultural Advisory Service), Prof. Sir
James Scott Watson, C.B.E., M.C., £3,250

Under Secretaries, C. T. Houghton, C.B., C.B.E.
(Principal Establishment and Organization Officer);
A. R. Manktelow, C.B. (Principal Finance Officer);
I. Morgan Jones, C.B.E. (Welsh Secretary);

AGRICULTURAL RESEARCH COUNCIL

Cunard Building, 15 Regent Street, S.W.1.

(Incorporated by Royal Charters July 23, 1931,
March 24, 1933, and Nov. 22, 1950.)

The creation of the Agricultural Research
Council was designed to complete the organisation
for the scientific supervision of Government-aided
research, other spheres of which were covered by
the Medical Research Council and the Department
of Scientific and Industrial Research. Besides
advising the Agricultural Departments upon the
application of practically all moneys voted by
Parliament for the furtherance of agricultural
research, the Council is empowered itself to
promote research with the aid of funds voted by

Parliament and of moneys received from private sources, societies, marketing boards, &c. Grants are also made to enable special agricultural investigations to be undertaken. Reports and publications of the Council are issued through H.M. Stationery Office and are obtainable from any bookseller.

Council, The Lord Rothschild, G.M., Sc.D., Ph.D., F.R.S. (Chairman); Prof. S. J. Watson, D.Sc., F.R.S.E., (Deputy Chairman), Prof. G. R. Cameron, D.Sc., F.R.S.; Prof. S. C. Harland, D.Sc., F.R.S., F.R.S.E.; Prof. E. J. Maskell, Ph.D., F.R.S.; Prof. K. Mather, D.Sc., Ph.D., F.R.S.;—Prof P. B. Medawar, D.Sc., F.R.S.; Prof. L. P. Pugh; Sir James Turner, I.L.D.; Prof. Sir James Scott Watson, C.B.E., M.C.; N. C. Wright, D.Sc., Ph.D.; Prof. J. S. Young, M.C., M.D.; Prof. S. Zuckerman, C.B., M.D., D.Sc., F.R.S.

Secretary, Sir William Slater, K.B.E., D.Sc.

Deputy Secretary, W. G. Alexander, O.B.E.

Assistant Secretaries, W. Ness; P. A. C. Thorne.

Scientific Assistants to the Secretary, E. E. Cheeseman, D.Sc.; G. G. Samuel; J. Wardley-Smith.

Principals, J. F. S. Law; L. S. Porter.

Senior Executive Officers, C. S. Goodwin; T. E. Pearson; J. H. Shimwell.

For the Research Institutes under the control of the council, see *Index*.

EXECUTIVE COUNCIL OF THE COMMONWEALTH

AGRICULTURAL BUREAUX

Farnham House, Farnham Royal, Bucks.

This Commonwealth organization, governed by an Executive Council composed of nominees of the Governments of the United Kingdom and the Dominions, and of the Colonial Office, was set up in 1929 to administer bureaux organized to act as clearing houses of information on research in eight specialized fields of agricultural science, and financed from a common fund provided by the Governments of the Empire. The Governments of the Empire instructed it in 1933 to supervise the administration and finances of the Commonwealth (formerly Imperial) Institute of Entomology, the Commonwealth (formerly Imperial) Mycological Institute and the Commonwealth Institute of Biological Control (formerly the Imperial Parasite Service), and in 1937 to organize bureaux for Forestry and Dairy Science. The Annual Reports of the Council are submitted to each of the Governments through their several members on the Council. The bureaux are attached to appropriate research institutions, but are distinct from them.

Chairman, E. Marsden, C.M.G., C.B.E., M.C., D.Sc., F.R.S.

Vice-Chairman, W. F. C. Morton.

Secretary, Sir Herbert Howard.

Institutes

Commonwealth Institute of Entomology, Natural History Museum, S.W. 7. **Director**, W. J. Hall, C.M.G., M.C., D.Sc.

Commonwealth Mycological Institute, Ferry Lane Kew, Surrey. **Director**, S. P. Wiltshire, D.Sc.

Commonwealth Institute of Biological Control, Science Buildings, Carling Avenue, Ottawa, Ontario, Canada. **Director**, W. R. Thompson, Ph.D., D.Sc., F.R.S.

Bureaux

Agricultural Parasitology (Helminthology), Institute of Agricultural Parasitology, Winches Farm Hatfield Road, St. Albans, Herts.—**Director**, Prof. R. T. Leiper, C.M.G., M.D., D.Sc., F.R.S.

Animal Breeding and Genetics, Institute of Animal Genetics, King's Buildings, West Mains Road, Edinburgh 9, Scotland.—**Director**, J. P. Maule.

Animal Health, Veterinary Laboratory, New Haw, Weybridge, Surrey.—**Director**, W. A. Pool.

Animal Nutrition, Rowett Research Institute, Bucksburn, Aberdeen, Scotland.—**Director**, I. Leitch, O.B.E., D.Sc.

Dairy Science, National Institute for Research in

Dairying, Shinfield, nr. Reading.—**Director**, A. W. Marsden.

Forestry, Imperial Forestry Institute, South Parks Road, Oxford.—**Director**, F. C. Ford Robertson.

Horticulture and Plantation Crops, East Malling Research Station, East Malling, nr. Maidstone, Kent.—**Director**, D. Akenhead, O.B.E.

Pastures and Field Crops, Welsh Plant Breeding Station, Penglais, Aberystwyth, Wales.—**Director**, A. G. G. Hill.

Plant Breeding and Genetics, School of Agriculture, Downing Street, Cambridge.—**Director**, P. S. Hudson, Ph.D.

Soil Science, Rothamsted Experimental Station, Harpenden, Herts.—**Director**, G. V. Jacks.

AIR MINISTRY

(see Royal Air Force)

AIR TRANSPORT ADVISORY COUNCIL

9 Buckingham Gate, S.W. 1

The Council is a statutory body which considers representations from the public regarding the air transport facilities provided by the Airline Corporations and the charges for any such facilities, and questions referred to it by the Minister of Civil Aviation. It also considers in accordance with terms of reference issued to it by the Minister of Civil Aviation on July 30, 1952, applications from the Airline Corporations and independent air transport companies to operate scheduled air services under the arrangements announced by the Minister on May 27, 1952.

Chairman, The Lord Terrington, K.B.E.

Deputy Chairman, The Viscount Runciman, O.B.E., A.F.C.

Members, Sir John Ure Primrose; G. D'Erlanger, C.B.E.; J. J. Taylor, O.B.E.

Assessor, W. W. Burkett, C.B.E., M.C.

Secretary, R. F. Prosser, M.C.

Assistant Secretary, E. J. Horrex, M.B.E.

COLLEGE OF ARMS OR HERALDS

COLLEGE

Queen Victoria Street, E.C. 4

[City: 2762]

The College of Arms is open daily from 10-4 and an Officer of Arms is always in attendance to deal with enquiries by the public. But such enquiries may also be directed to any of the Officers of Arms, either personally or by letter.

There are 13 officers of the College, 3 Kings of Arms, 6 Heralds and 4 Pursuivants, who all specialise in genealogical and heraldic work for their respective clients. The College possesses the finest records on these subjects in the world. It is the official repository of the Arms and pedigrees of English, Northern Irish, Dominion and Colonial families, and its records include official copies of the records of Ulster King of Arms, the originals of which remain in Dublin.

Arms have been and still are granted by Letters Patent from the Kings of Arms under Authority delegated to them by the Sovereign, such authority having been expressly conferred on them since at least the fifteenth century. A right to Arms can only be established by the registration in the official records of the College of Arms of a pedigree showing direct male line descent from an ancestor already appearing therein as being entitled to Arms, or by making application to the College of Arms for a Grant of Arms.

Earl Marshal, His Grace the Duke of Norfolk, K.G., G.C.V.O., Royal Victorian Chain.

Kings of Arms

Garter, Hon. Sir George Rothe Bellew, K.C.V.O., F.S.A.

Clarenceux, Sir Arthur William Steuart Cochrane, K.C.V.O.

Norroy and Ulster (and Earl Marshal's Secretary), Sir Gerald Woods Wollaston, K.C.B., K.C.V.O., F.S.A.

Six Heralds

LANCASTER, Archibald George Blomefield Russell, C.V.O., F.S.A.
CHESTER, Sir John Dunamace Heaton-Armstrong, M.V.O.
YORK, Aubrey John Toppin, M.V.O., F.S.A.
RICHMOND (and Registrar), Anthony Richard Wagner, C.V.O., F.S.A.
WINDSOR, Richard Preston Graham-Vivian, M.C.
SOMERSET, Michael Roger Trappes-Lomax.

Four Pursuivants

ROUGE CROIX, John Riddell Bromhead Walker, M.V.O., M.C.
BLUEMANTLE, James Arnold Frere, F.S.A.
PORTCULLIS, The Master of Sinclair, M.V.O.
ROUGE DRAGON, Robin de la Lanne Mirrices.

COURT OF THE LORD LYON

H.M. Register House, Edinburgh
 [Edinburgh: 30137]

The Scottish Court of Chivalry, including the genealogical jurisdiction of the *Ri-Sennachie* of Scotland's Celtic Kings, adjudicates rights to arms and administration of *The Scottish Public Register of All Arms and Bearings* (under 1672 cap. 47) and *Public Register of All Genealogies*. The Lord Lyon presides and judicially establishes rights to existing arms or succession to Chiefship, or for cadets with scientific "differences" showing position in clan or family. Pedigrees are also established by decrees of Lyon Court. As *Royal Commissioner in Armory*, he grants Patents of Arms (which constitute the grantee and heirs noble in the Noblesse of Scotland) to "virtuous and well-deserving" Scotsmen, and to Dominion or Colonial petitioners (personal or corporate) of Scottish connection. In Scots Law, Arms are protected by Statute; their usurpation is punishable, and the Registration Fees of Honour on patents (£50) and matriculations (£20) are payable to H.M. Exchequer.

LORD LYON KING OF ARMS, Sir Thomas Innes of Learney, K.C.V.O., F.S.A.Scot., Advocate... £738

Three Heralds (£25 each)

MARCHMONT, Lt.-Col. John William Balfour Paul, D.S.O.
ROTHESAY, Lt.-Col. H. A. B. Lawson, F.S.A.Scot.
ALBANY, Major Charles Ian Fraser of Reelgig.

Three Pursuivants (£16 13s. 4d. each)

UNICORN, Lt.-Col. Gordon Dalrymple of the Binns, C.I.E.
CARRICK, James Monteith Grant, W.S.
KINTYRE, Ian Moncreiffe of Easter Moncreiffe, Advocate.

LYON CLERK AND KEEPER OF RECORDS, Harold Andrew Balvaird Lawson. £387
PROCURATOR-FISCAL, Malcolm Robertson MacGregor, W.S.
HERALD PAINTER, Miss Nora Gordon.

ART GALLERIES, ETC.

ROYAL FINE ART COMMISSION

22A Queen Anne's Gate, S.W.1
 [Whitehall: 39351]

Appointed in May, 1924 "to enquire into such questions of public amenity or of artistic importance as may be referred to them from time to time by any of our Departments of State, and to report thereon to such Department; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies, where it appears to the said Commission that their assistance would be advantageous." In August, 1933, a Royal Warrant extended the Terms of Reference of the Commission—"so that it shall also be open to the said Commission, if they so desire, to call the attention of any of Our Departments of

State, or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the said Commission may appear to affect amenities of a national or public character"; in May, 1946, a Royal Warrant further extended the Terms of Reference of the Commission as follows:—

We Do give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever: We Do authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid:

Chairman, The Earl of Crawford and Balcarres, G.B.E.

Commissioners, John Betjeman; Hon. Lionel Brett; Louis de Soissons, O.B.E., R.A.; Frederick Gibberd; Sir William Halcrow; Sir William Holford; Edward Maufe, R.A.; Sir Thomas Merton, F.R.S.; Lord Methuen, A.R.A.; Henry Moore; J. M. Richards; Prof. A. E. Richardson, R.A.; A. C. Richmond, C.B.E.; John Summerson, C.B.E.; Prof. Geoffrey Webb, C.B.E.
Secretary, Hon. Godfrey Samuel.

ROYAL FINE ART COMMISSION FOR SCOTLAND

National Portrait Gallery, Queen Street,
 Edinburgh 2

[Tel.: Edinburgh Central: 7956]

Appointed in 1927 "to enquire into such questions of public amenity or of artistic importance relating to Scotland as may be referred to them by any of our Departments of State, and to report thereon to such Departments; and, furthermore, to give advice on similar questions when so requested by public or quasi-public bodies when it appears to the said Commission that their assistance would be advantageous." Under Royal Warrant of May 8, 1953, the terms of reference of the Commission were extended so that it is now open to the Commission, if it so desires, to call the attention of any Department of State or of the appropriate public or quasi-public bodies, to any project or development which in the opinion of the Commission may appear to affect amenities of a national or public character; and to call before it any persons, examine any documents or visit any places it might deem expedient for the more effectual carrying out of its duties.

Commissioners, The Earl of Rosebery, K.T., D.S.O., M.C. (*Chairman*); J. S. Clarke; Lady MacGregor of MacGregor, O.B.E.; Charles d'O. Pilkington-Jackson; J. Cameron Small, O.B.E., I.D.; A. Graham Henderson, R.S.A., F.R.I.B.A.; William H. Kininmonth, A.R.S.A., F.R.I.B.A.; R. H. Mathew, C.B.E., F.R.I.B.A.; Ian G. Lindsay, A.R.S.A., F.R.I.B.A.

Secretary, Robert Moncreiff, M.B.E.

NATIONAL GALLERY

Trafalgar Square, W.C.2
 [Whitehall: 7618-9]

Hours of opening.—Weekdays 10 to 6, Sundays 2 to 6. Admission free. Closed on Good Friday, Christmas Eve, and Christmas Day.

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and Exhibition of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1876, 1887, 1911, 1928, 1930 and 1937. Expenses for 1950-51 were estimated at £49,188.

TATE GALLERY

Millbank, S.W.1
[Tate Gallery: 4444]

Hours of opening.—Weekdays 10 to 6. Sundays 2 to 6. Admission free, except to certain temporary exhibitions. Closed on Good Friday, Christmas Eve, and Christmas Day.

The Tate Gallery, which constitutes the National Collection of British Painting and of modern Foreign Art, was opened in 1897, the cost of erection (£80,000) being defrayed by the late Sir Henry Tate, who also contributed the nucleus of the present collection. The Turner Wing, built at the expense of Sir Joseph Duveen and his son, Lord Duveen, was opened in 1910. Lord Duveen also defrayed the cost of galleries to contain the collection of modern foreign painting, completed in 1926, and a new sculpture hall, completed in 1937. The cost of administration in 1951-52 was £25,295

Director and Keeper, Sir John Rothenstein, C.B.E., Ph.D.....£1,850

Deputy Keepers, N. R. Reid; Le R. S. Le Roux.....£1,275 to £1,475

BRITISH BROADCASTING CORPORATION

Broadcasting House, Portland Place, W.1
[Langham: 4468]

The BBC was incorporated under Royal Charter as successor to the British Broadcasting Company, Ltd., whose licence expired Dec. 31, 1926. Its present Charter came into force July 1, 1952, and expires June 30, 1962. The Chairman, Vice-Chairman and other Governors are appointed by the Crown. The BBC is financed by means of revenue from receiving licences for the Home services and by a Grant in Aid from Parliament for the External services. The total number of licences in force in April 1953 was 12,912,786 of which 2,203,343 were for television as well as sound broadcasting.

The BBC's Home Services are transmitted on the following wavelengths:—London (330 metres), Midland (276 metres), North (434 metres), West (285 and 206 metres), Scottish (371 metres), Welsh (341 metres) and Northern Ireland (261 metres). The Light Programme is broadcast on long wave (1,500 metres) with an auxiliary service in ten selected areas on medium wave (247 metres). The Third Programme is broadcast on 464 metres and 194 metres. There are also regular transmissions in Welsh & Gaelic in the Welsh and Scottish Home Services. The Television Service is radiated from Alexandra Palace, London and Glencalr (Belfast), on 45.0 megacycles per second (vision) and 41.5 megacycles per second (sound). Sutton Coldfield, near Birmingham (vision 61.75 m/cs, sound 58.25 m/cs). Holme Moss, nr. Huddersfield (vision 51.75 m/cs, sound 48.25 m/cs). Kirk o' Shotts, Scotland (vision 56.75 m/cs, sound 53.25 m/cs). Wenvoe, nr. Cardiff and Pontop Pike (near Newcastle) (vision 66.75 m/cs, sound 63.25 m/cs).

News Bulletins are given in the Home Service at 7 a.m. (except Sundays), 8 a.m., 1 p.m., 6 p.m., 9 p.m., and a summary at 11 p.m. In the Light Programme they are given at 9 a.m. and 10 p.m. and summaries at 7 p.m. and 11.56 p.m.

The External Services can be divided as follows:—The General Overseas Service (in English) is broadcast on short waves for 147 hours per week.

Special Services in English on short waves as follows: Europe 45 hours per week (reinforced at times on medium waves), North America 30½ hours, Colonies 9½ hours, Pacific 7 hours, "London Calling Asia" 5½ hours, the Far East 3½ hours, South Africa ½ hour, and the Rhodesias ½ hour per week.

Foreign Language Services. Broadcasts of news and other varied material are given to foreign audiences in their own languages as follows:—

Europe: Programmes on long, medium and short waves in Albanian, German for Austria, Bulgarian, Czech, Danish, Dutch, Finnish, French, German, Greek, Hungarian, Italian, Norwegian, Polish,

Portuguese, Rumanian, Russian, Serbo-Croat, Slovak, Slovene, Spanish, Swedish and Turkish. These services provide 210½ hours of programmes per week.

Overseas: Programmes on short waves in Afrikaans, Arabic, Bengali, Burmese, Cantonese, French (for Canada and South-east Asia), Hebrew, Hindi, Indonesian, Japanese, Kuoyu, Malay, Maltese, Marathi, Persian, Portuguese (for Latin-America), Sinhalese, Spanish (for Latin-America), Tamil, Thai, Urdu and Vietnamese. These services provide 106 hours of programmes per week.

The total amount of programme hours provided by the BBC's External Services is 565 per week.

BRITISH OVERSEAS AIRWAYS CORPORATION

Airways House, Great West Road, Brentford
[Ealing: 7777]

Established in 1939, British Overseas Airways Corporation acquired on April 1, 1940, the air transport undertakings of Imperial Airways and British Airways, which had been at the disposal of the Secretary of State for Air since the outbreak of war.

B.O.A.C. is the larger of the two Government Corporations which are charged with the task of developing and operating British scheduled air transport services under the provisions of the Air Corporations Act, 1949. Its functions are to operate the Commonwealth and Empire, North Atlantic, South Atlantic and Far Eastern routes from the United Kingdom. In June, 1953, the Corporation was operating forty-seven routes, with a gross route mileage of 247,087. On these routes there were eighty-seven services weekly in each direction, and the mileage covered was 735,827 per week.

The Members of the Corporation are appointed by the Minister for Transport and Civil Aviation.

Chairman, Sir Miles Thomas, D.F.C.
(and expenses £1,000) £7,500
Deputy Chairman, Whitney W. Straight, C.B.E., M.C., D.F.C.
Member (full-time), Major J. R. McCrindle, C.M.G., O.B.E., M.C.
Members (part-time), J. W. Booth; Sir Francis Brake; The Lord Burghley, K.C.M.G.; Maj. R. H. Thornton, M.C.; Sir Clement Jones, C.B., each £500; H. L. Newlands, M.B.E., £1,500; Sir John Stephenson, C.B.E. (unpaid).
Secretary, K. H. Staple, O.B.E.

BRITISH TRANSPORT COMMISSION

55 Broadway, Westminster, S.W.2
[Abbey: 5666]

The British Transport Commission was established as a public authority under the provisions of the *Transport Act, 1947*. On Jan. 2, 1948, the main-line railways of Great Britain, together with their ancillary services, the smaller railway undertakings previously under the jurisdiction of the Railway Executive Committee, the railways and road services formerly controlled by the *London Passenger Transport Board*, and various canal and inland waterway undertakings specified in the Act, were vested in the Commission. The administration and development of these and other transport services was delegated to five public bodies known respectively as the *Railway Executive*, the *London Transport Executive*, the *Road Haulage Executive*, the *Docks and*

Inland Waterways Executive and the *Hotels Executive*. In accordance with the 1947 Act the Commission acquired road haulage undertakings which in 1946 were engaged in carriage of goods involving routes of 40 miles, or upwards, and necessitating journeys beyond a 25 miles radius from the operating centre. Under the provisions of the *Transport Act, 1953*, however, the Commission is to dispose of the property held by it for the purposes of the part of its undertaking which is carried on through the Road Haulage Executive. The 1953 Act also provides for the re-constitution of the Commission, the abolition of the Railway Executive and the reorganization of the railways. Under an Order of the Ministry of Transport, on and from Oct. 1, 1953, all the functions of the Railways the Road Haulage, the Docks and Inland Waterways and the Hotels Executives, respectively, were assumed by the Commission.

Chairman, Gen. Sir Brian Robertson, Bt., G.C.B., G.B.E., K.C.M.G., K.C.V.O., D.S.O., M.C.
Deputy Chairman, Sir John Benstead, C.B.E.; *Members*, F. A. Pope, C.I.E.; The Lord Rushmore

each £5,000
Part-time Members, H. P. Barker (£500); Capt. Sir Ian Bolton, Bt., O.B.E. (£1,000); J. Ryan, C.B.E., M.C. (£500).
Chief Secretary, S. B. Taylor.
Chief Public Relations and Publicity Officer, J. H. Brebner, O.B.E.
Controller, Sir Reginald Wilson.
Chief Solicitor and Legal Adviser, M. H. B. Gilmour.
Chief Research Officer, C. C. Inglis.

London Transport Executive

55, Broadway, Westminster, S.W.1
[Abbey: 1234]

Chairman, (vacant).
Members, John Cliff (*Deputy Chairman*) (£3,500); A. H. Grainger; L. C. Hawkins; A. B. D. Valentine and (part-time) The Lord Williams (£750).
Secretary, R. M. Robbins.

BRITISH TRAVEL AND HOLIDAYS ASSOCIATION

Headquarters and Tourist Information Centre
Queen's House, 64/65 St. James's Street, S.W.1
[Mayfair: 9191]
Overseas Offices

British Travel Centres: 336 Madison Avenue, New York; 40 Adelaide Street West, Toronto; 6 Place Vendôme, Paris.

The functions of the Association can be summarized as follows: (a) to increase the number of visitors from overseas and (b) to ensure that overseas visitors and home holiday makers are well received and accommodated and have the best facilities that can be provided. The Association is a Company limited by guarantee and registered under the Companies Act and draws its membership from all sections of the tourist and holiday industry. The Association is supported by H.M. Government and receives a Grant-in-Aid from the Board of Trade. The Board consists of a Chairman who is appointed by the President of the Board of Trade, and 29 members, 8 of whom are nominated by the President of the Board of Trade; 7 are elected by the members of the Association and the remainder nominated by the Scottish Tourist Board (2), the Welsh Tourist and Holidays Board (1) and the Northern Ireland Tourist Board (1). The Board has the advice of 3 main Committees: the Finance and General Purposes Committee, Tourist Development Committee and the Holiday Development Committee, whose Chairmen are drawn from the Board. The Tourist Development Committee and Holiday Development Committee draw a proportion of their membership from the Board and the remainder from interested organizations.

Chairman, Sir Alexander H. Maxwell, K.C.M.G.
Deputy Chairman, E. L. Taylor.
Director-General, J. G. Bridges, M.B.E.

* Borne on the strength of the Ministry of Defence.

CABLE AND WIRELESS LIMITED

Head Office—Electra House, Victoria Embankment,
W.C.2

[Temple Bar: 1222]

Under the Commonwealth Telegraphs Act, 1949, the assets of the telecommunications services conducted by Cable and Wireless, Ltd., in the United Kingdom were transferred to the Post Office. The company, however, continues to be responsible for the operation of its telecommunications services overseas and to own the assets relative to those services.

Cable and Wireless, Ltd., operates overseas telecommunication services, comprising 155,000 nautical miles of submarine cables and 150 wireless circuits. Its operations include telegraphy (cable and radio), phototelegraphy, and radiotelephony, ship/shore radiotelegraph including direction finding, aeronautical wireless facilities, internal telephone systems (in Bahrain, Cyprus and Kuwait) and broadcasting services in Kenya. It has 134 branches overseas and a Cable Station and Training School in the United Kingdom.

The Company was formed in 1929 (as Imperial and International Communications, Ltd., the name being changed in 1934) to unify the overseas communications of the Empire, consequent upon the Imperial Wireless and Cable Conference of 1928. The Commonwealth Telecommunications Conference, 1945, recommended the acquisition of the services in the U.K., the Dominions and Southern Rhodesia by their respective governments, with a unifying Commonwealth Telecommunications Board to replace the existing advisory Commonwealth Communications Council. Cable and Wireless, Ltd., was therefore acquired (under the Cable and Wireless Act, 1946) by the U.K. Government as from January 1, 1947, new directors being appointed.

Chairman, Maj.-Gen. L. B. Nicholls, C.B., C.B.E.

£3,500 (and expenses up to £350)

CHURCH COMMISSIONERS

1 Millbank, Westminster, S.W.1

(Hours 9 to 5)

[Whitehall: 5444]

The Church Commissioners were established on April 1, 1948, by the amalgamation of Queen Anne's Bounty (established 1704) and the Ecclesiastical Commissioners (established 1836). The main function of the Commissioners is the management of assets of the Church in order to endow and augment benefices, &c., and to carry out many administrative duties in relation thereto.

The Commissioners are required to carry all their revenues (other than the income of special trusts administered by them) to a general fund, the balance of which, after defraying secured charges and the cost of administration, etc., is carried to an appropriation account for allocation in further grants, etc., during the ensuing year.

Summary of General Fund: Income and Expenditure

(For the year to March 31, 1953)

Receipts:	
Estates (net).....	£2,088,352
Dividends, interest, etc.....	5,746,935
	<u>£7,835,287</u>

Expenditure:	
Benefices, dignitaries, administration, etc.....	£6,633,232
Balance to Appropriation Account for grants, 1953-54.....	1,202,055

Official Architect, A. P. Lay.
 Asst. Architect, B. H. Dowland.

Surveyor's Department

Official Surveyor, W. R. Paice.

MINISTRY OF CIVIL AVIATION*

Ariel House, Theobalds Road, W.C.1

[Chancery: 3366]

Telegraphic Address: Aircivil, Telex, London.

Under the Civil Aviation Act, 1949, the Minister of Civil Aviation is charged with the general duty of organizing, carrying out and encouraging measures for the development of civil aviation, for the designing, development and production of civil aircraft, for the promotion of safety and efficiency in their use, and for research into air navigation; but, by the terms of the Act, the Minister may not produce aircraft. The Minister may establish and maintain such aerodromes and technical services, etc., as are required for civil aviation purposes.

Under these powers the Ministry operates over thirty civil state aerodromes, air traffic control and telecommunication services, including the "airways" system of navigation, investigates accidents, licenses and supervises training of aircrews, licenses non-state aerodromes, and exercises general oversight of the activities of the Air Corporations under the statutory powers laid down in the Air Corporations Act, 1949.

The direct supervision and executive management of state-owned aerodromes, technical services and of certain facilities at non-state aerodromes are handled by four Divisional organizations.

Minister, THE RIGHT HON. ALAN TINDAL LENNOX-BOYD, M.P. £4,000

COMMONWEALTH RELATIONS OFFICE

Downing Street, S.W.1

[Whitehall: 2323]

In July, 1925, a new Secretaryship of State for Dominion Affairs was created, and as a result the Dominions Office was set up, to take over from the Colonial Office business connected with the self-governing Dominions, the self-governing Colony of Southern Rhodesia and the South African territories (Basutoland, Bechuanaland Protectorate and Swaziland) and business relating to the Imperial Conference.

In July, 1947, the titles of the Secretary of State for Dominion Affairs and the Dominions Office were altered to the Secretary of State for Commonwealth Relations and the Commonwealth Relations Office respectively. As from August 15, 1947, the Secretary of State for Commonwealth Relations assumed responsibility for relations with India and Pakistan and as from February 4, 1948, for relations with Ceylon.

Secretary of State for Commonwealth Relations, THE RT. HON. VISCOUNT SWINTON, G.B.E., C.H., M.C. £4,000

Secretary-General, Colonel W. W. Shaw-Zambra, C.B.E., T.D.

CONSERVANCY BOARDS**THAMES CONSERVANCY**

2-3 Norfolk Street, Strand, W.C.2

[Temple Bar: 4982]

The Conservation of the River Thames was granted to the Lord Mayor of London in 1487, and delegated to 12 Conservators in 1857, the powers being reconstituted in 1894. The Port of London Act, 1908, took over, as from March 31, 1909, all rights, powers, and duties of the Conservators in respect of the river below Teddington. In 1932 the various Acts relating to the Conservators were repealed and a consolidating Act (The Thames Conservancy Act, 1932) was passed. This Act was amended by the Thames Conservancy Act, 1950, which extended the powers of the Conservators, made further provision for their revenue, and increased the number of Conservators to 38. The Conservators are also the Drainage Board of the Thames Catchment Area.

Chairman, Sir Jocelyn Bray.

Vice-Chairman, Lt.-Col. R. H. Haslam, O.B.E.

Secretary and Solicitor and Parliamentary Officer, G. E. Walker.

Chief Engineer, R. V. W. Stock, O.B.E., M.C.

Treasurer and Accountant, C. T. Bailey.

LEE CONSERVANCY CATCHMENT BOARD

Brettenham House, Lancaster Place

Strand, W.C.2

This Board was established by the *Land Drainage Act*, 1930, as the flood prevention authority for the Lee watershed, which covers an area of about 600 square miles. Since January 1, 1948, it has

also been responsible for the prevention of pollution (by the exercise of powers under the *Lee Conservancy Acts*, 1868-1938, and the *Rivers (Prevention of Pollution) Act*, 1951) and for fisheries. The Board consists of 20 members, one of whom is appointed by the Minister of Agriculture and Fisheries, the remainder being appointed or elected by local authorities in the Catchment Area.

Chairman, Sir Thomas Keens.

Vice-Chairman, F. W. Tipton.

Clerk of the Board, J. L. Spiller, D.R.C.

Engineer, N. Medington.

Accountant, L. D. Thompson.

Protection of Water Officer, F. W. Swain.

FORTH CONSERVANCY BOARD

Instituted by the Forth Conservancy Order Confirmation Act, 1921, for the preservation, maintenance and improvement of the River and Firth of Forth within the limits prescribed in the Order.

Chairman, Capt. Cedric A. Salvsen, M.C.

Clerk and Treasurer, M. D. Kennedy, W.S., 14 Princes Street, Falkirk.

Engineers, Messrs. Leslie & Reid, C.E., 53 Manor Place, Edinburgh.

Marine Superintendent, Capt. E. Roynon-Jones, R.N.

COTTON BOARD

Royal Exchange 6th Floor, Manchester 2

Established under the Cotton Industry Development Council Order, 1948.

Chairman, Sir Raymond Streat, C.B.E.

Other Independent Members, W. D'Arcy Madden, C.B.E.; Sir Leslie Roberts, C.B.E.

Members representing the Employers, W. T. Winterbottom, C.B.E.; E. W. Cockcroft, O.B.E.; H. Havgarth Jackson, M.C.; A. V. Symons.

Members representing Employees, A. Roberts, C.B.E.; Sir Andrew Naesmith, C.B.E.; W. L. Heywood, O.B.E.

Director General, J. Broatch.

RAW COTTON COMMISSION

Cotton Exchange Buildings, Old Hall Street, Liverpool 3

Established by the Cotton (Centralized Buying) Act, 1947.

Chairman, Sir Ralph Lacey, (and *allice* £500) £5,000

Deputy Chairman, H. Jackson (and *allice* £250) £3,000

Independent Member, H. Arrowsmith, C.B.E. (and *allice* £250) £3,000

Members (part-time), W. Blackburn; W. Bowles;

A. J. Byrne; N. H. Cooper; W. Fletcher;

J. H. Hulme; G. E. Latimer; A. Roberts, C.B.E.;

C. Schofield, O.B.E.; F. Wood each £500

Secretary, E. J. Richmond.

COMMISSIONERS OF CROWN LANDS

1 Cambridge Gate, Regent's Park, N.W.1.

[Welbeck: 6511]

THE CROWN LANDS.—The Land Revenues of the Crown in England and Wales have been collected on the public account since 1760, when George III. surrendered them and received a fixed annual payment or Civil List. At the time of the surrender the gross revenues amounted to about £89,000 and the net return to about £11,000.

In the year ended March 31, 1953, the total Receipts by the Commissioners were £2,526,113. The Expenditure (including Property Tax allowed) was £1,539,743. The sum of £980,000 was paid to the Exchequer in 1952-53 as Surplus Revenue, being a net sum from which no deductions have to be made for administration.

The Land Revenues in Ireland have been carried to the Consolidated Fund since 1820; from April 1, 1923, as regards Southern Ireland, they have been

collected and administered by the Irish Free State (Republic of Ireland).

The Land Revenues in Scotland were transferred to the Commissioners in 1833.

Commissioners (ex-officio), The Minister of Agriculture and Fisheries and the Secretary of State for Scotland.....unpaid

Permanent Commissioner, C. G. Eastwood, C.M.G. £2,500

MINISTRY OF DEFENCE

Storey's Gate, S.W.1

[Whitehall: 7000]

The Ministry of Defence was formally constituted as from January 1, 1947, following the passing of the Ministry of Defence Act, 1946.

The Act charges the Minister with responsibility for apportioning in broad outline available resources between the fighting services in accordance with the strategic policy laid down by the Defence Committee, of which the Prime Minister is Chairman, and the Minister of Defence Deputy Chairman, with the Lord President of the Council, the Secretary of State for Foreign Affairs, the Chancellor of the Exchequer, the First Lord of the Admiralty, the Secretaries of State for War and for Air, the Minister of Labour and National Service and the Minister of Supply.

The Minister submits his proposals concerning appointment of resources, questions of general administration and of administration of inter-service organizations (such as Combined Operations and Intelligence bureaux) to the Defence Committee and to the Cabinet before introducing them annually to Parliament in a White Paper.

The Chief of the Naval Staff (1st Sea Lord), the Chief of the Imperial General Staff and the Chief of the Air Staff are in attendance at the Defence Committee, to which are summoned Ministers other than members, Service Officers and Civil Servants, according to the matters under consideration.

DEVELOPMENT COMMISSION

6A Dean's Yard, Westminster, S.W.1

[Abbey: 1177]

The Development Commission was established and constituted under the *Development and Road Improvements Fund Act, 1909*, and the amending Act of 1910. The Act of 1909 as affected by the *Forestry Act, 1919*, and the *Ministry of Transport Act, 1919*, empowers the Treasury, on the recommendation of the Development Commission, to make advances by way of grant or loan to Government Departments, public authorities, universities, colleges, schools, institutions, or associations not trading for profit. At the present time the Fund may be used to promote the economic advancement of the rural community through schemes designed to help and expand directly or indirectly agriculture and rural industries, and widen the opportunities of rural life; and secondly to promote the development and improvement of fisheries by a variety of means, including the promotion of research, both marine and freshwater, and the construction and improvement of fishery harbours.

Chairman, The Countess of Albemarle.

Other Commissioners, Lt.-Col. Hon. R. E. B. Beaumont, T.D.; L. K. Elmhirst; Prof. J. Gray, C.B.E., M.C., Sc.D., LL.D., F.R.S.; J. L. Longland; K. A. H. Murray, Ph.D.; J. Sullivan; W. J. Wright.

Secretary, E. H. E. Havelock, C.B., C.B.E., F.R.S.E. £2,500

NATIONAL DOCK LABOUR BOARD

9-10 Upper Brook St., W.1

Chairman, The Lord Crook.

General Manager and Secretary, Sir Ian Parkin, C.B.E., Assistant General Manager and Secretary, M. R. Haddock, O.B.E.

Chief Accountant, H. C. Harper.

Chief Welfare Officer, F. G. Thomas.

THE DUCHY OF CORNWALL

Buckingham Gate, S.W.1

[Victoria: 7346-7]

The Duchy of Cornwall was instituted by Edward III. in 1337 for the support of his eldest

son, Edward, the Black Prince, and since that date the eldest son of the Sovereign has succeeded to the Dukedom by inheritance.

The Council

H.R.H. The Duke of Edinburgh, K.G., E.T., G.B.E.; The Earl of Radnor, K.C.V.O. (Lord Warden of the Stanaries); Sir Edward Peacock, G.C.V.O. (Receiver General); The Earl Fortescue, K.G., C.B., O.B.E., M.C.; The Earl Waldegrave; Hon. Charles Russell, Q.C. (Attorney-General of the Duchy); Sir John Carew Pole, Bt., D.S.O.; Sir Clive Burn, K.C.V.O. (Secretary).

Other Officers of the Duchy of Cornwall

*Auditor, Sir Nicholas Waterhouse, K.B.E.
Solicitor, Sir Clive Burn, K.C.V.O.
Asst. Secretary, P. G. T. Kingsley, C.V.O.
Deputy Receiver, R. C. B. Rady.
Sheriff (1953-54), Col. George Thomson, D.S.O., M.C.*

THE DUCHY OF LANCASTER

Lancaster Place, Strand, W.C.2

[Temple Bar: 8277]

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. As the Lancaster inheritance it goes back to 1265. Edward III. erected Lancashire into a County Palatine for his son John of Gaunt, Duke of Lancaster, in 1377.

Chancellor of the Duchy of Lancaster, The Viscount WOOLTON, P.C., C.H. £4,000

*Private Secretary, J. C. Seddon.
Vice-Chancellor, Sir Leonard Stone, O.B.E.

Registrar, Preston District, J. M. Worthington.
Do. Manchester District, R. A. Forrester.
Do. Liverpool Dist., J. M. Worthington.*

THE COUNTY PALATINE OF DURHAM

Registrar's Chambers, St. Nicholas Court, Market Place, Durham

It is uncertain when the existing "Palatine" privileges were first exercised, but these rights were recognized by Parliament in 1289 during the Episcopate of Bishop Bek and as having then existed "time out of mind" and long prior to the Norman Conquest. William I. in reorganizing his Kingdom was, so far as Durham was concerned, content to confirm the Laws of St. Cuthbert which previously Guthred, King of Northumbria and Alfred the Great appear in turn to have confirmed. Palatine Counties were formed for the protection of defence of the Border, in this case against the Scots, and the Lands of the See were far more extensive than the present County of Durham as is shown by the Jurisdiction of the present Palatine Court extending over Norham and Islandshire (roughly the northern quarter-of Northumberland) and Bedlingtonshire. Palatinate rights were exercised by succeeding Prince Bishops till resumed by the Crown in 1836; but this Court of co-ordinate Jurisdiction with the Chancery Division of the High Court still exists and continues in large measure to exercise its ancient powers and on behalf of the Crown.

*Chancellor, His Hon. John Charlesworth, LL.D.
Attorney-General, G. R. Hinchliffe, Q.C.*

*Solicitor-General, H. R. B. Shepherd, Q.C.
Registrar of Chancery Court, Lt.-Col. H. L. Swinburne.*

MINISTRY OF EDUCATION

Curzon Street, W.1

[Mayfair: 9400]

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The Education Act of 1944 established the Ministry of Education. The cost of administration was estimated at £1,016,030 in the financial year 1953 with £992,675 for Inspection and Examination.

*Minister of Education, The Rt. Hon. FLORENCE HORSBURGH, C.B.E., M.P. £4,000

Subject to Provincial Differentiation of £55 at all points.

EXCHEQUER AND AUDIT DEPARTMENT

Victoria Embankment, E.C.4

[Central: 8901]

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of Comptroller General of the Receipt and Issue of the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the Two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer, he authorizes all issues from the Exchequer after satisfying himself that Parliament has given authority for them. He examines the Exchequer accounts and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts, he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of monies provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of those accounts are reported to the House of Commons.

The Export Guarantees Acts, 1949 to 1952,
empower the Board of Trade to give guarantees to
United Kingdom exporters for the purpose of en-
couraging export trade. This power is adminis-
tered by the Export Credits Guarantee Depart-
ment. Commercial guarantees, under Section 1
of the 1949 Act, are given after consultation with
an Advisory Council set up for the purpose.

Minister, H. R. Mackeson, M.P.

MINISTRY OF FOOD

Dean Bradley House, Horseferry Road, S.W.1.

[Abbey: 9030], Great Westminster House, Horse-
ferry Road, S.W.1 [Victoria: 8511].
Also at: Regent's Park, N.W.1; Stanmore, Middle-
sex; Colwyn Bay, North Wales; Oxford; Guild-
ford and Thames Ditton, Surrey.

The Ministry of Food was formed out of the
Food (Defence Plans) Department of the Board of
Trade, which was set up in 1936. The Minister of
Food was appointed by Order in Council under the
Ministers of the Crown (Emergency Appoint-
ments) Act, 1939. On November 7, 1945, it was
announced that the Government had decided to
make the Ministry of Food a permanent Depart-
ment of State. This decision was implemented by
means of the Ministers of the Crown (Transfer of
Functions) Act, 1946.

 West, O.B.E., T.D. (Midland and North Midland).

FOREIGN OFFICE

Downing Street, S.W.1

[Whitehall: 8440]

The Office of Secretary of State for Foreign Affairs was created in 1782, superseding that of the former Secretary for the Northern Department and assuming the foreign affairs functions of the former Secretary for the Southern Department. The Secretary of State is assisted by a Minister of State, by two Parliamentary Under-Secretaries and by a staff of permanent officials headed by one Permanent Under-Secretary, four Deputy Under-Secretaries and nine Assistant Under-Secretaries. The chief function is the conduct of relations with foreign Powers and other functions include certain formal duties, the general administration of Her Majesty's Foreign Service and receiving and answering communications from individuals, other Government Departments and diplomatic and consular representatives in this country and abroad. In April, 1947, the Control Office for Germany and Austria came under the

direction of the Foreign Secretary and was incorporated in the Foreign Office while retaining a separate entity as the German Section. On April 1, 1949, control of the Administration of African Territories was vested in the Foreign Office. The Administrative expenses of the Foreign Office were estimated at £2,793,000 in 1953 and those of the German Section at £89,650.

FORESTRY COMMISSION

25 Savile Row, W.1

[Regent: 0221]

The Forestry Commission, a Body Corporate,
is appointed under the Forestry Acts, 1919 to 1951.
The Commissioners are charged with the general
duty of promoting the interests of forestry, the
development of afforestation, the production and
supply of timber and the maintenance of reserves
of growing trees in Great Britain. Including the
former Crown Woods, transferred to the Com-
mission in 1924, the Department has acquired about
1,855,700 acres of land (60 per cent. being plant-
able), of which 799,600 acres are under plantations.
Under the Dedication Scheme, financial assistance
is given to private owners and local authorities in
respect of approved works of afforestation.

Chairman, The Earl of Radnor, K.C.V.O. £3,250
Forestry Commissioners (Unpaid), J. M. Bannerman,
O.B.E.; Lt.-Col. Sir Richard Cotterell, Bt.;
A. P. F. Hamilton, C.I.E., O.B.E., M.C.; S. C.
Longhurst; J. McNaughton, C.B.E.; Lloyd O.
Owen; Major John Stirling of Fairburn, M.B.E.;
W. H. Vaughan, O.B.E.; Professor J. Walton.

Director-General, A. H. Gosling, C.B. £3,250

Deputy Director-General, Sir Henry C. Beresford-
Peirse, Bt. £2,500

Directors (England), O. J. Sangar, C.B.E., M.C. (1
Princes Gate, S.W.7); (Scotland), A. H. H. Ross,
O.B.E. (25 Drumsheugh Gardens, Edinburgh 3);
(Wales), A. P. Long, C.B.E. (Victoria House,
Marine Terrace, Aberystwyth); (Research and
Education), James Macdonald, C.B.E. (25 Savile
Row, W.1). £2,000

Secretary, H. A. Turner. £1,500 to £2,000

REGISTRY OF FRIENDLY SOCIETIES
(CENTRAL OFFICE) AND OFFICE OF
THE INDUSTRIAL ASSURANCE COM-
MISSIONER

17 North Audley Street, W.1

[Mayfair: 7001]

A Barrister was appointed in 1828 to certify the
Rules of Savings Banks, and in 1829 to certify those
of Friendly Societies. In 1846 he was constituted

Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the Central Office of the Registry of Friendly Societies was created, consisting of the Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Acts, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trade Union Acts, the Scientific Societies Act, the Trustee Savings Banks and Post Office Savings Bank Acts, the Loan Societies Act, the Shop Clubs Act and the Superannuation and other Trust Funds (Validation) Act. Under the Industrial Assurance Acts, the Chief Registrar is charged with various powers and duties in relation to Industrial Assurance Companies and Collecting Societies, and in that capacity is styled the Industrial Assurance Commissioner.

Chief Registrar and Industrial Assurance Commissioner
Sir Bernard Kerr White, K.B.E. £3,250
Private Sec., Miss M. E. Blake.

Assistant Registrar and Deputy Industrial Assurance Commissioner, C. B. Crabbe. £2,200
Assist. Registrar, R. E. Grindle (Establishment Officer). £1,625 to £2,000
Senior Legal Assistant, A. Vollmar

Legal Assistants, W. T. Cuthbert; J. E. Gower, M.C.
£800 to £1,070

Returns and Statistics Branch (Head), W. R. Johnson, M.B.E., £1,100 to £1,325; (Assist. Head), H. G. H. Tate £900 to £1,075

Investigations Branch (Head), D. Leigh (Chief Investigations Officer), £1,100 to £1,325; (Assist. Head), J. Bellingham £900 to £1,075

Rules Branch (Head), D. G. Fisher, M.B.E., £1,100 to £1,325; (Assist. Head), A. A. C. Soper £900 to £1,075

Establishment and Accounts Branch (Head), W. S. Brown, M.B.E., £900 to £1,075

General Branch (Head), F. W. Round, M.B.E. £900 to £1,075

Disputes Branch (Head), A. E. M. Brook £900 to £1,075

Registry of Friendly Societies, Scotland

19 Heriot Row, Edinburgh, 3

[Edinburgh Central: 4871]

Assistant Registrar, Chilton L. Addison Smith, C.B.E., W.S.

MINISTRY OF FUEL AND POWER

Thames House South, Millbank, S.W.1

[Abbey: 7000]

Set up in June, 1942, when it absorbed the former Mines and Petroleum Departments and the functions of the Board of Trade in relation to Gas and Electricity, the Ministry of Fuel and Power deals with policy considerations affecting the coal, oil, gas and electricity industries and is responsible for the general administration of the statutes dealing with those industries. While the need for regulation of supplies continues, it controls the distribution of solid fuels.

Senior Scottish Officer (vacant).

THE GAS COUNCIL

1 Grosvenor Place, S.W.1

[Sloane: 4554]

The Gas Council was set up by the Gas Act, 1948,

to advise the Minister of Fuel and Power on the

affairs of the Gas Industry and to assist the Area

Boards in the discharge of their functions. It is

responsible for the creation and issue of British

Gas Stock. **Chairman, Col. Sir Harold Smith,**

K.B.E. (£6,000). Deputy Chairman, H. F. H. Jones,

M.B.E. (£5,000). The Members are the Chairmen

of the 12 Area Gas Boards.

Area Gas Boards

Twelve Area Gas Boards are established by the

Act. The assets and liabilities of former Gas

Undertakings vested on May 1, 1949, in these

Boards which are responsible for the manufacture

and distribution of Gas and for the production of

residuals.

Chairmen

Scottish, Sir A. Clow, K.C.S.I., C.I.E.

Northern, E. Crowther, C.B.E.

North Western, D. P. Welman.

North Eastern, Dr. R. S. Edwards.

East Midlands, S. Smith.

West Midlands, G. le B. Diamond, C.B.E.

Wales, T. Mervyn Jones.

Eastern, Sir J. Stephenson, C.B.E.

North Thames, M. Milne-Watson, C.B.E.

South Eastern, W. K. Hutchison.

Southern, A. R. McBain, C.B., O.B.E.

South Western, C. H. Chester, C.B.E. each £4,500

Gas Consultative Councils

Twelve Gas Consultative Councils were set up

by the Minister of Fuel and Power, one for the

area of each of the Gas Boards to represent the interests of consumers. These Councils deal with specific complaints and consider matters of general interest to the consumer. Under the Act the Area Boards are required to inform the Councils of their general plans and arrangements. Each Council Chairman is an *ex officio* member of his Area Board.

Chairmen

Scottish, A. T. Morrison, C.B.E.
 Northern, J. Hoy, B.E.M.
 North Western, C. E. P. Stott.
 North Eastern, W. Regan.
 East Midlands, C. R. Bates, O.B.E.
 West Midlands, W. H. Malcolm.
 Wales, G. F. Hamer, C.B.E.
 Eastern, R. Turner.
 North Thames, E. Bayliss.
 South Eastern, A. B. Constable.
 Southern (vacant).
 South Western, A. W. Loveys.

GENERAL REGISTER OFFICE

(England and Wales)

Somerset House, W.C.2

[Temple Bar: 2407]

The Registration of Births, Marriages and Deaths is believed to have been inaugurated by Thomas Cromwell in 1522, but it was not until 1830 that a Registrar General was appointed and a universal system instituted of civil registration of births, marriages and deaths in England and Wales. The Registrar General controls the local registration service in the exercise of its registration and marriage duties; these duties are set out in a series of Births and Deaths Registrations Acts and in the Marriage Act, 1949. In 1920 provision was made for the registration of still-births and for the re-registration under the Registrar General's instructions of births of legitimated persons. At Somerset House are maintained central records of births, marriages and deaths and a register of adopted children.

The Registrar General is also responsible for the collection, preparation and analysis of statistics relating to population, fertility, births, marriages, deaths and diseases and for the arrangements for the census of population.

Officers

Registrar General, George North, C.B., M.C., LL.D. £2,850

Private Secretary, Miss E. D. Edwards
 Assistant Secretary and Establishment Officer, A. E. Joll (Establishments, Accounts, International and General) £1,500 to £2,000

THE GOVERNMENT CHEMIST

(Government Laboratory)

13 Clements Inn Passage, Strand, W.C.2

[Chancery: 6331]

In 1842 a laboratory was established by the Board of Excise (later the Board of Inland Revenue) for the purpose of checking the adulteration of tobacco and subsequently for the examination of all excisable commodities. In 1875 the Board of Customs formed a laboratory for duties connected with its responsibilities under the *Food and Drugs Act* and in the assessment of revenue on imported materials. These two laboratories were amalgamated in 1894 as the Government Laboratory, the facilities of which were then made available to other Departments for advice and assistance on chemical matters. In order to promote the centralization, as far as possible, of all Government Chemical work and to place all Departments on the same footing as regards its services, the Laboratory was constituted as a separate Department in 1911 under the Government Chemist.

Besides having statutory functions under the *Food and Drugs Act* and the *Fertilisers and Feeding Stuffs Act*, the Department carries out analytical, advisory and investigatory chemical work for most other Government Departments.

Government Chemist, G. M. Bennett, C.B., Sc.D., F.R.S. £2,500

Deputy Government Chemist, J. R. Nicholls, C.B.E., D.Sc. £1,850 to £2,125

MINISTRY OF HEALTH

Savile Row, W.1

[Regent: 8411]

The Ministry of Health was established by the Ministry of Health Act, 1919, to exercise in England and Wales functions with respect to health and local government which, in the main, were previously exercised by the Local Government Board and the National Health Insurance Commission. Responsibility for the National Health Insurance and the Widows', Orphans' and Old Age Contributory Pensions Schemes was transferred to the Ministry of National Insurance on April 1, 1945. The functions of the Ministry relating to local government, rating and valuation, public health, housing, rent control, burials and coast protection were transferred to the Ministry of Housing and Local Government on January 30, 1951. The responsibility for hospitals, limb-fitting, the supply of surgical appliances and certain treatment services formerly undertaken by the Ministry of Pensions was assumed on August 31, 1953. The main administrative divisions in the Ministry of Health deal with general practitioner services; nursing; general relations with various health professions; Local Authority health and welfare services; hospitals and specialist services; mental health services; nutrition, and international health.

NATIONAL HEALTH SERVICE

Regional Hospital Boards

England and Wales are divided into 14 hospital
 regions, each with its own Regional Hospital
 Board which administers the hospital and specialist
 services in the area. The Regional Hospital Boards
 do not, however, administer Teaching Hospitals,
 which have their own Boards of Governors.

The Chairmen and members of Regional
 Hospital Boards and Boards of Governors are
 appointed by the Minister of Health in accordance
 with the third schedule to the National Health
 Service Act, 1946.

Areas

HERRING INDUSTRY BOARD

1 Glenfinlas Street, Edinburgh 3

[Edinburgh Central: 6486]

Chairman, Sir Frederick A. Bell, O.B.E., M.C.

Gen. Manager, H. H. Goodwin, M.B.E.

Secretary, T. H. Wilson, M.C.

HOME OFFICE

Whitehall, S.W.1

[Whitehall: 8100]

The Home Office deals with such internal affairs of England and Wales as are not assigned to other Departments. The Home Secretary is the channel of communication between Her Majesty the Queen and Her subjects, and between the U.K. Government and the Government of Northern Ireland, the Channel Islands and the Isle of Man. The chief matters with which the Home Office is concerned are—The maintenance of law and order; the efficiency of the police service; the treatment of offenders, including juvenile offenders; the efficiency of the Probation Service; the organization of Magistrates' Courts; legislation on criminal justice; the supervision of the Fire Service; the preparations for Civil Defence Services; the care of children by local authorities and voluntary societies; the regulation of the employment of children and young persons; the control and naturalization of aliens; the law relating to parliamentary and local government elections. In addition, many miscellaneous subjects are dealt with, including explosives, dangerous drugs, poisons, intoxicating liquor and State Management Districts (England and Wales), shops, public safety, entertainments, byelaws on good rule and government and other subjects, cremations and burials, betting and gambling; addresses and petitions to the Queen, ceremonials and formal business connected with honours.

CENTRAL OFFICE OF INFORMATION

Norgeby House, 83 Baker Street, W.1.

[Welbeck: 4420]

The Central Office of Information came into being on April 1, 1946, as a non-Ministerial Department with a separate vote; it operates in England and Wales, the regional work in Scotland being undertaken by the Scottish Home Department, and in Northern Ireland by the Northern Ireland Government. The Department performs common technical and production functions, and gives specialized assistance and advice to other Departments, for both home and overseas publicity purposes. Some of its principal functions are: (a) To act as the central Government agency for the preparation of publicity material required by Departments, such as films, press and poster advertising, photographs, books, pamphlets and magazines and exhibitions; to maintain liaison with Departments on their publicity requirements; and to provide technical advice and assistance, both at home and overseas. (b) To undertake publicity as required on home matters of inter-departmental scope. (c) To provide a daily service of comment and background information for the use of Press Officers and other British Representatives overseas. (d) To provide a regional publicity organization in this country for the use of Departments requiring such services. (e) To provide the machinery in this country for the central issue of Government news.

Director-General, Sir Robert Fraser, O.B.E... £3,250
 Private Secretary, Miss E. M. Butler.

 Secretary, S. Robinson, C.M.G.

MINISTRY OF LABOUR AND NATIONAL SERVICE

8 St. James's Square, S.W. 1

[Whitehall: 6200]

The office of Minister of Labour was created by the *New Ministries and Secretaries Act, 1926*, which provided for the transfer to the Ministry of Labour of certain of the duties of the Board of Trade. Under the *Minister of National Service Order, 1939*, the title of the Ministry was changed to the Ministry of Labour and National Service and the offices of Minister of Labour and National Service are held by the same Minister. The principal functions of the Ministry of Labour and National Service are: (1) Administration of the *Employment and Training Act, 1948*, and provision of facilities and services for the purposes of assisting persons to select, fit themselves for, obtain and retain employment suitable to their age and capacity, of assisting employers to obtain suitable employees, and generally for the purpose of promoting employment in accordance with the requirements of the community, including the operation of, (a) a national system of Employment Exchanges; (b) Appointments Offices and the Technical and Scientific Register; (c) Nursing Appointments Offices; and (d) Government schemes for vocational training (2) Provision of a comprehensive Youth Employment Service and responsibility for the Central Youth Employment Executive. (3) Collection and publication of information and statistics relating to employment, manpower, wages, earnings, hours, retail prices, industrial disputes and industrial accidents and diseases. (4) Manpower policy and co-operation with other Government Departments on matters of general employment policy including the distribution of industry and the maintenance of a high and stable level of employment. (5) Registration, medical examination and calling-up of men under the *National Service Acts*. (6) Resettlement in civil employment of men called up under the *National Service Acts* and released from service in the Regular Forces. (7) Administration of the *Disabled Persons (Employment) Act, 1944*, including provision of services for industrial rehabilitation and vocational training of disabled persons. (8) Employment of older men and women. (9) Administration of the *Factories Acts*, and miscellaneous work relating to safety, health and welfare of workpeople. (10) Generally dealing with industrial relations, i.e. questions affecting relations between employers and employed. In particular with: (a) assistance in the prevention or settlement of industrial disputes, including the administration of the *Conciliation Act, 1896*, the *Industrial Court Act, 1919* and the *Industrial Disputes Order, 1951*; (b) administration of the *Wages Councils Act, 1945*; (c) administration of the *Catering Wages Act, 1945*, and (d) encouragement

of good personnel management and of arrangements for joint consultation in industry. (11) Employment of foreign workers in Great Britain. (12) Dealing with labour policy in the international field, including relations with the International Labour Organization, and overseas questions concerning labour and employment. (13) Agency work for other Government Departments in connexion with National Insurance, National Assistance, issue of ration documents and distribution of welfare foods, repayment of income tax to unemployed persons and the issue of passports.

The gross amount for the services administered by the Ministry (Parliamentary Vote, Class V, 7) was estimated at £23,161,000 for the year ending March 31, 1954, reduced by Appropriations in Aid to a net sum of £19,275,000. The gross estimate is made up as follows: Salaries, £14,136,000 for Headquarters Departments and Outstations; £467,000 for Travelling, etc.; Expenses; £88,000 for incidental Expenses; £2,750 for Law Charges; £36,250 for Fees, Travelling Expenses, etc., of Chairmen and Members of Committees, Wage Councils, Compensation Appeal Tribunals, etc.; £2,440,000 for Employment and Transference; £4,997,000 for Training, Rehabilitation, Resettlement, etc.; £660,000 for expenditure under the *National Service Acts*; £49,000 for Other Services (Industrial Court, Industrial Disputes Tribunal, Anthrax Disinfection and the Office of the Umpire). There is also included in the Gross Estimate a sum of £285,000 in connexion with the International Labour Organization, including a grant in aid of the expenses of the Organization of £264,000.
